The final stage of the cycle (FIG. 36-5) focused on the dramatic appearance of the masks from the *eravo* (men's house). After a procession, men wearing the hevehe mingled with relatives. Upon conclusion of related dancing (often lasting about a month), the Elema ritually killed and then dumped the masks in piles and burned them. This destruction allowed the sea spirits to return to their mythic domain and provided a pretext for commencing the cycle again.

ABELAM The art of the Abelam people illustrates how Oceanic art often includes references both to fundamental spiritual beliefs and to basic subsistence. The Abelam are agriculturists living in the hilly regions north of the Sepik River. Relatively isolated, the Abelam received only sporadic visits from foreigners until the 1930s, so little is known about early Abelam history. The principal crop is the yam. Because of the importance of yams to the survival of Abelam society, those who can grow the largest yams achieve power and prestige. Indeed, the Abelam developed a complex yam cult, which involves a series of rites and activities intended to promote the growth of the tubers. Special plantations focus on yam cultivation. Only initiated men who observe strict rules of conduct, including sexual abstinence, can work these fields. The Abelam believe ancestors aid in the growth of yams, and they hold ceremonies to honor these ancestors. Special long yams (distinct from the short yams cultivated for consumption) are on display during these festivities, and the largest (9 to 10 feet long) bear the names of important ancestors. Yam masks (FIG. 36-6) with cane or wood frames, usually painted red, white, yellow, and black, are an integral part of the ceremonies. The most elaborate masks also incorporate sculpted faces, cassowary feathers, and shell ornaments. They covered the "heads" of the long yams. Humans never wear the yam masks, but the Abelam use the same designs to decorate their bodies for dances, revealing how closely they identify with their principal food source.

36-6 Abelam yam mask, from Maprik district, Papua New Guinea, Melanesia, early to mid-20th century. Painted cane, 1′ $6\frac{9}{10}$″ high. Musée Barbier-Mueller, Geneva.

The Abelam believe their ancestors aid in the growth of their principal crop, the yam. Painted cane yam masks are an important part of the elaborate ceremonies honoring these ancestors.

36-7 Tatanua mask, from New Ireland, Papua New Guinea, Melanesia, 19th to 20th centuries. Wood, fiber, shell, lime, and feathers, 1′ 5½″ high. Otago Museum, Dunedin.

In New Ireland, malanggan rites facilitate the transition of the soul from this world to the land of the dead. Dancers wearing tatanua masks representing the deceased play a key role in these ceremonies.

New Ireland and the Trobriand Islands

East of New Guinea but part of the modern nation of Papua New Guinea are New Ireland and the Trobriand Islands, two important Melanesian art centers.

NEW IRELAND Mortuary rites and memorial festivals are a central concern of the Austronesian-speaking peoples who live in the northern section of New Ireland. The term *malanggan* refers to both the festivals held in honor of the deceased and the carvings and objects produced for these festivals. Malanggan rites are part of an ancestor cult and are critical in facilitating the transition of the soul from the world of the living to the realm of the dead and the rechanneling of energy from the deceased into the community of the living. In addition to the religious function of malanggan, the extended ceremonies also promote social solidarity and stimulate the economy (as a result of the resources necessary to mount impressive festivities). To educate the younger generation about these practices, malanggan also includes the initiation of young men.

Among the many malanggan carvings produced—masks, figures, poles, friezes, and ornaments—are tatanua masks (FIG. 36-7). *Tatanua* represent the spirits of specific deceased people. The materials used to make New Ireland tatanua masks are primarily soft wood, vegetable fiber, and rattan. The crested hair, made of fiber, duplicates a hairstyle formerly common among the men. For the eyes, the mask makers insert sea-snail shells. Traditionally, artists paint the masks black, white, yellow, and red—colors the people of New Ireland associate with warfare, magic spells, and violence. Although some masks are display pieces, dancers wear most of them. Rather than destroying their ritual masks after the conclusion of the ceremonies, as some other cultures do, the New Irelanders store them for future use.

TROBRIAND ISLANDS The various rituals of Oceanic cultures discussed thus far often involve exchanges intended to cement social relationships and reinforce or stimulate the economy. Further, these rituals usually have a spiritual dimension. All of these aspects apply to the practices of the Trobriand Islanders, who live off the coast of the southeastern corner of New Guinea. *Kula*—an exchange of white conus-shell arm ornaments for red chama-shell necklaces—is a characteristic practice of the Trobriand Islanders. Kula exchanges may have originated some 500 years ago. They can be complex, and there is great competition for valuable shell ornaments (determined by aesthetic appeal and exchange history). Because of the isolation imposed by their island existence, the Trobriand Islanders had to undertake potentially dangerous voyages to participate in kula trading. Appropriately, the Trobrianders lavish a great deal of effort on decorating their large and elaborately carved canoes, which feature ornate prows and splashboards (FIG. 36-8). To ensure a successful

36-8 Canoe prow and splashboard, from Trobriand Islands, Papua New Guinea, Melanesia, 19th to 20th centuries. Wood and paint, 1′ 3½″ high, 1′ 11″ long. Musée du quai Branly, Paris.

To participate in kula exchanges, the Trobriand Islanders had to undertake dangerous sea voyages. They decorated their canoes with abstract human, bird, and serpent motifs referring to sea spirits.

kula expedition, the Trobrianders invoke spells when attaching these prows to the canoes. Human, bird, and serpent motifs—references to sea spirits, ancestors, and totemic animals—appear on the prows and splashboards. Because the sculptors use highly stylized motifs in intricate intertwined curvilinear designs, identification of the specific representations is difficult. In recent decades, the Trobrianders have adapted kula to modern circumstances, largely abandoning canoes for motorboats. The exchanges now facilitate business and political networking.

MICRONESIA

Some 2,500 islands, most of them tiny, scattered over nearly three million square miles of ocean make up Micronesia, home to about 200,000 people today. The Austronesian-speaking cultures of Micronesia tend to be more socially stratified than those found in New Guinea and other Melanesian areas. Micronesian cultures frequently center on chieftainships with craft and ritual specializations, and their religions include named deities as well as honored ancestors. Life in virtually all Micronesian cultures focuses on seafaring activities—fishing, trading, and long-distance travel in large oceangoing vessels. For this reason, much of the artistic imagery of Micronesia relates to the sea.

36-9 Canoe prow ornament, from Chuuk, Caroline Islands, Micronesia, late 19th century. Painted wood, birds 11″ × 10⅝″. British Museum, London.

Prow ornaments protected canoe paddlers and could be lowered to signal a peaceful voyage. This Micronesian example may represent facing sea swallows or perhaps a stylized human figure.

Caroline Islands

The Caroline Islands are the largest island group in Micronesia. The arts of the Caroline Islands include the carving of canoes and the fashioning of charms and images of spirits to protect travelers at sea and for fishing and fertility magic.

CHUUK Given the importance of seafaring, it is not surprising many of the most highly skilled artists in the Caroline Islands were master canoe builders. The canoe ornament illustrated here (FIG. 36-9) comes from Chuuk. Carved from a single plank of wood and fastened to the prow of a large, paddled war canoe, the ornament served a decorative purpose but also provided protection on arduous or long voyages. That this and similar ornaments are not permanent parts of the canoes reflects their function. When approaching another vessel, the Micronesian seafarers lowered these ornaments as a signal their voyage was a peaceful one. The Chuuk prow seems at first to be an abstract design but may represent, at the top, two facing sea swallows—creatures capable of navigating long distances. Some scholars, however, think the entire piece represents a stylized human figure, with the "swallows" constituting the arms.

BELAU On Belau (formerly Palau) in the Caroline Islands, the islanders put much effort into creating and maintaining elaborately painted men's ceremonial clubhouses called *bai* (FIGS. 36-10 and 36-11). Although the bai was the domain of men, women figured prominently in the clubhouse's imagery, consistent with the important symbolic and social positions women held in Belau culture (see "Women's Roles in Oceania," page 1051). A common element surmounting the main bai entrance was a simple, symmetrical

36-10 Men's ceremonial house, from Belau (Palau), Micronesia, 20th century. Ethnologisches Museum, Staatliche Museen zu Berlin, Berlin.

The Belau men's clubhouses (bai) have extensive carved and painted decorations illustrating important events and myths related to the clan who built the bai. The central motif is a Dilukai (FIG. 36-11).

Women's Roles in Oceania

Given the prominence of men's houses and the importance of male initiation in so many Oceanic societies, women might appear to be peripheral members of these cultures. Much of the extant material culture—ancestor masks, shields, clubs—seems to corroborate this. In reality, however, women play crucial roles in most Pacific cultures. In addition to their significant contributions through exchange and ritual activities to the maintenance and perpetuation of the social network upon which the stability of village life depends, women are important producers of art.

Historically, women's artistic production has been restricted mainly to forms such as barkcloth, weaving, and pottery. In some cultures in New Guinea, potters were primarily female. Throughout much of Polynesia, women produced barkcloth (see "Tongan Barkcloth," page 1053), which they often dyed and stenciled, and sometimes even perfumed. Women in the Trobriand Islands still make brilliantly dyed skirts of shredded banana fiber that not only are aesthetically beautiful but also serve as a form of wealth, presented symbolically during mortuary rituals.

In most Oceanic cultures, women usually do not use the same adzes and axes male sculptors employ, and they do not work in hard materials, such as wood, stone, bone, or ivory. Further, they do not produce images having religious or spiritual powers or that confer status on their users. Scholars investigating the role of the artist in Oceania have concluded that the reason for these restrictions is a perceived difference in innate power. Because women have the natural power to create and control life, male-dominated societies developed elaborate ritual practices to counteract this female power. By excluding women from participating in these rituals and denying them access to knowledge about specific practices, men derived a political authority that could be perpetuated. It is important to note, however, that even in rituals or activities restricted to men, women often participate. For example, in the now-defunct Hevehe ceremonial cycle (FIG. 36-5) in Papua New Guinea, women made the fiber skirts for the hevehe masks but feigned ignorance about these sacred objects, because such knowledge was the exclusive privilege of initiated men.

Pacific cultures often acknowledged women's innate power in the depictions of women in Oceanic art. For example, the splayed Dilukai female sculpture (FIG. 36-11) that appears regularly on Palauan bai (men's houses; FIG. 36-10) celebrates women's procreative powers. Often flanked by figures of sexually aroused men, these female figures were surrounded by images of sun disks, trees, and birds. They faced east toward the rising sun and symbolized the sun's gifts to earth as well as human fertility. The Dilukai figure also confers protection upon visitors to the bai, another symbolic acknowledgment of female power. Similar concepts underlie the design of the Iatmul men's house (FIG. 36-4). Conceived as a giant female ancestor, the men's house incorporates women's natural power into the conceptualization of what is normally the most important architectural structure in an Iatmul village. In addition, the Iatmul associate entrance and departure from the men's house with death and rebirth, thereby reinforcing the primacy of fertility and the perception of the men's house as representing a woman's body.

One reason scholars have tended to overlook the active participation of women in all aspects of Oceanic life is that until recently the objects visitors to the Pacific collected were primarily those suggesting aggressive, warring societies. That the majority of these Western travelers were men and therefore had contact predominantly with men no doubt accounts for this pattern of collecting. Recent scholarship has done a great deal to rectify this misperception, thereby revealing the richness of social, artistic, and political activity in the Pacific.

36-11 Dilukai, from Belau (Palau), Micronesia, late 19th or early 20th century. Wood, paint, and kaolin, 2′ $1\frac{5}{8}$″ high. Metropolitan Museum of Art, New York (Michael C. Rockefeller Collection).

Sculpted wooden figures of a splayed female, or Dilukai, commonly appear over the entrance to a Belau bai (FIG. 36-10). The figures served as symbols of fertility and protected the men's house.

wooden sculpture (on occasion, a painting) of a splayed female figure, known as *Dilukai* (FIG. 36-11). She wears jewelry and an armband, emblems of wealth and power, and serves as a symbol of both protection and fertility.

Whereas the Iatmul make their ceremonial houses (FIG. 36-4) by tying, lashing, and weaving different-size posts, trees, saplings, and grasses, the Belau people make the main structure of the bai entirely of worked, fitted, joined, and pegged wooden elements, which enables them to assemble it easily. The Belau bai have steep overhanging roofs decorated with geometric patterns along the roof boards. Skilled artists carve the gable in low relief and paint it with narrative scenes, as well as various abstracted forms of the shell money used traditionally on Belau as currency. These decorated storyboards illustrate important historical events and myths related to the clan who built the bai. Similar carved and painted crossbeams are inside the house. The rooster images along the base of the facade symbolize the rising sun, while the multiple frontal human faces carved and painted above the entrance and on the vertical elements above the rooster images represent a deity called Blellek. He warns women to stay away from the ocean and the bai or he will molest them.

POLYNESIA

Polynesia was one of the last areas in the world humans settled. Habitation in the western Polynesian islands did not begin until about the end of the first millennium BCE, and in the south not until the first millennium CE. The settlers brought complex sociopolitical and religious institutions with them. Whereas Melanesian societies are fairly egalitarian and advancement in rank is possible, Polynesian societies typically are highly stratified, with power determined by heredity. Indeed, rulers often trace their genealogies directly to the gods of creation. Most Polynesian societies possess elaborate political organizations headed by chiefs and ritual specialists. By the 1800s, some Polynesian cultures (Hawaii and the Society Islands, for example) had evolved into kingdoms. Because of this social hierarchy, historically most Polynesian art belonged to persons of noble or high religious background and served to reinforce their power and prestige. These objects, like their chieftain owners, often possessed *mana,* or spiritual power.

Rapa Nui (Easter Island)

Some of the earliest datable artworks in Oceania are also the largest. This is especially true of the colossal sculptures of Rapa Nui.

MOAI The *moai* (FIG. 36-12) of Rapa Nui are monumental sculptures as much as 50 feet tall and weighing up to 100 tons. They stand as silent sentinels on stone platforms (*ahu*) marking burial or sacred sites used for religious ceremonies. Most of the moai consist of huge, blocky figures with fairly planar facial features—large staring eyes, strong jaws, straight noses with carefully articulated nostrils, and elongated earlobes. A number of the moai have *pukao*—small red scoria (a local volcanic stone) cylinders that serve as a sort of topknot or hat—atop their heads. Although debate continues,

36-12 Row of moai on a stone platform, Rapa Nui (Easter Island), Polynesia, 10th to 12th centuries. Volcanic tuff and red scoria, tallest statues approximately 19′ high.

The moai of Rapa Nui are monoliths as much as 50 feet tall. Most scholars believe they portray ancestral chiefs. They stand on platforms marking burials or sites for religious ceremonies.

Tongan Barkcloth

Tongan barkcloth provides an instructive example of the labor-intensive process of tapa production. At the time of early contact between Europeans and Polynesians in the late 18th and early 19th centuries, ranking women in Tonga made decorated barkcloth (*ngatu*). Today, women's organizations called *kautaha* produce it. The kautaha may have the honorary patronage of ranking women. In Tonga, men plant the paper mulberry tree and harvest it in two to three years. They cut the trees into about 10-foot lengths and allow them to dry for several days. Then the women strip off the outer bark and soak the inner bark in water to prepare it for further processing. They place these soaked inner bark strips over a wooden anvil and repeatedly strike them with a wooden beater until they spread out and flatten. Folding and layering the strips while beating them, a felting process, results in a wider piece of ngatu than the original strips. Afterward, the beaten barkcloth dries and bleaches in the sun.

The next stage of ngatu production involves the placement of the thin, beaten sheets over semicircular boards. The women then fasten embroidered design tablets (*kupesi*—usually produced by men) of coconut-leaf midribs and string patterns to the boards. They transfer the patterns on the design tablets to the outer barkcloth by rubbing. Then the women fill in the lines and patterns by painting, covering the large white spaces with colored figures. The Tongans use brown, red, and black pigments derived from various types of bark, clay, fruits, and soot to create the colored patterns on ngatu. Sheets, rolls, and strips of ngatu play an important role in weddings, funerals, and ceremonial presentations for ranking persons.

36-13 Mele Sitani, ngatu with manulua designs, Tonga, Polynesia, 1967. Barkcloth.

In Tonga, the production of decorated barkcloth, or ngatu, involves dyeing, painting, stenciling, and perfuming. Mele Sitani made this one with a two-bird design for the coronation of Tupou IV.

many scholars believe lineage chiefs or their sons erected the moai and the sculptures depict ancestral chiefs. The moai, however, are not individual portraits but generic images the Easter Islanders believed had the ability to accommodate spirits or gods. The statues thus mediate between chiefs and gods, and between the natural and cosmic worlds.

Archaeological surveys have documented nearly 1,000 moai erected on some 250 ahu. Most of the stones are soft volcanic tuff and came from the same quarry at Rano Raraku. Some of the sculptures are red scoria, basalt, or trachyte. After quarrying, the Easter Islanders dragged the moai to the ahu sites, and then positioned them vertically. Given the extraordinary size of these *monoliths,* their production and placement serve as testaments to the achievements of this Polynesian culture. According to one scholar, it would have taken 30 men one year to carve a moai, 90 men two months to transport it from the quarry to the ahu site (often several miles away), and 90 men three months to position it vertically on the platform.

Tonga

Tonga is the westernmost island group in Polynesia. One of its most distinctive products is barkcloth, which women have traditionally produced throughout Polynesia.

BARKCLOTH Artists produce barkcloth from the inner bark of the paper mulberry tree. The finished product goes by various names in Polynesia, but during the 19th century, when the production of barkcloth reached its zenith, *tapa* became the most widely used term. Although the primary use of tapa in Polynesia was for clothing and bedding, in Tonga, large sheets (FIG. 36-13) were (and

still are) produced for exchange (see "Tongan Barkcloth," page 1053). Barkcloth can also have a spiritual dimension and can serve to confer sanctity upon the object wrapped in it. Appropriately, the Polynesians traditionally wrapped the bodies of high-ranking deceased chiefs in barkcloth.

The use and decoration of tapa have varied over the years. In the 19th century, tapa used for everyday clothing was normally unadorned, whereas tapa used for ceremonial or ritual purposes was dyed, painted, stenciled, and sometimes even perfumed. The designs applied to the tapa differed depending upon the particular island group producing it and the function of the cloth. The production process was complex and time-consuming. Indeed, some Oceanic cultures, such as those of Tahiti and Hawaii, constructed buildings specifically for the beating stage in the production of barkcloth. Tapa production reached its peak in the early 19th century, partly as a result of the interest expressed by Western whalers and missionaries. By the late 19th century, the use of tapa for cloth had been abandoned throughout much of eastern Polynesia, although its use in rituals (for example, as a wrap for corpses of deceased chiefs or as a marker of tabooed sites) continued. Even today, tapa exchanges are still an integral part of funerals and marriage ceremonies, and even the coronation of kings.

The decorated *ngatu* (barkcloth) shown in FIG. 36-13 clearly demonstrates the richness of pattern, subtlety of theme, and variation of geometric forms characteristic of Tongan royal barkcloths. MELE SITANI made this ngatu for the accession ceremony of King Tupou IV (r. 1965–2006) of Tonga. She kneels in the middle of the ngatu, which features triangular patterns known as *manulua*. This pattern results from the intersection of three or four pointed triangles. *Manulua* means "two birds," and the design gives the illusion of two birds flying together. The motif symbolizes chieftain status derived from both parents.

36-14 Hair ornaments, from the Marquesas Islands, Polynesia, early to mid-19th century. Bone, $1\frac{1}{2}$″ high (*left*), $1\frac{2}{5}$″ high (*right*). University of Pennsylvania Museum of Archaeology and Anthropology, Philadelphia.

These hollow cylindrical bone ornaments representing deified ancestors adorned the hair of Marquesan warriors during the 19th century. The warriors wore them until they avenged the death of a kinsman.

Marquesas, Austral, and Cook Islands

Even though the Polynesians were skillful navigators, various island groups remained isolated from one another for centuries by the vast distances they would have had to cover in open outriggers. This geographical separation explains the development of distinct regional styles within a recognizable general Polynesian style.

MARQUESAS ISLANDS Although Marquesan chiefs trace their right to rule genealogically, the political system before European contact allowed for the acquisition of power by force. As a result, warfare was widespread through the late 19th century. Among the items produced by Marquesan artists were ornaments (FIG. 36-14) that often adorned the hair of warriors. The hollow, cylindrical bone or ivory ornaments (*ivi p'o*) functioned as protective amulets. Warriors wore them until they avenged the death of a kinsman. The ornaments are in the form of *tiki*—carvings of exalted, deified ancestor figures. The large, rounded eyes and wide mouths of the tiki are typically Marquesan, as is the use of a continuous line to outline both the nose, with its wide nostrils, and the oversized eyes.

Another important art form for Marquesan warriors during the 19th century was *tattoo,* which protected the individual, serving in essence as a form of spiritual armor, as did the hair ornaments. Body decoration in general is among the most pervasive art forms found throughout Oceania. Polynesians developed the painful but prestigious art of tattoo more fully than many other Oceanic peoples (see "Tattoo in Polynesia," page 1055), although tattooing also occurred in various parts of Micronesia. In Polynesia, with its hierarchical social structure, nobles and warriors in particular accumulated various tattoo patterns over the years to enhance their status, mana, and personal beauty. Largely as a result of missionary pressure in the 19th century, tattooing virtually disappeared in many Oceanic societies, but some Pacific peoples have revived tattooing as an expression of cultural pride.

An 1813 engraving (FIG. 36-15) depicts a Marquesan warrior from Nukahiva Island covered with elaborate tattoo patterns. The warrior holds a large wooden war club over his right shoulder and carries a decorated water gourd in his left hand. The various tattoo patterns marking his entire body seem to subdivide his body parts into zones on both sides of a line down the center. Some tattoos accentuate joint areas, whereas others separate muscle masses into horizontal and vertical geometric shapes. The warrior also covered his face, hands, and feet with tattoos.

RURUTU Deity images with multiple figures attached to their bodies are characteristic of Rurutu in the Austral Islands and of Rarotonga (FIG. 36-15A) and Mangaia in the Cook Islands. These carvings probably represented clan and district ancestors, honored for their protective and procreative powers. Ultimately, the images refer to the creator deities the Polynesians revere for their central role in human fertility.

Rurutu is the northernmost of the Austral Islands in French Polynesia. In August 1821, following an edict of its leaders, the entire population converted to Christianity. As a symbol of their embrace of the new monotheistic religion, the inhabitants presented statues of their gods to the British missionaries stationed on a neighboring island.

36-15A Rarotonga staff god, 19th or early 20th century.

Tattoo in Polynesia

Throughout Oceanic cultures, as in Africa (see Chapter 37), body decoration was an important means of representing cultural and personal identity. In addition to clothing and ornaments, body adornment most often took the form of tattoo. Although tattooing was a common practice in Micronesia, it was more pervasive in Polynesia. Indeed, the English term *tattoo* is Polynesian in origin, related to the Tahitian, Samoan, and Tongan word *tatau* or *tatu*. In New Zealand, the markings are called *moko*. Within Polynesian cultures, tattoo reached its zenith in the highly stratified societies of New Zealand, the Marquesas Islands, Tahiti, Tonga, Samoa, and Hawaii. Both sexes displayed tattoos. In general, men had more tattoos than women, and the location of tattoos on the body differed. For instance, in New Zealand, the face and buttocks were the primary areas of male tattoo, whereas tattoos appeared on the lips and chin of women.

Historically, tattooing served a variety of functions in Polynesia beyond personal beautification. It indicated status, because the quantity and quality of tattoos often reflected rank. In the Marquesas Islands, for example, tattoos completely covered the bodies of men of high status (FIG. 36-15). Certain patterns could be applied only to ranking individuals, but commoners also had tattoos, generally on a less extensive scale than elite individuals. For identification purposes, slaves had tattoos on their foreheads in Hawaii and on their backs in New Zealand. According to some accounts, victors placed tattoos on defeated warriors. In Polynesia, tattoos often identified clan or familial connections. Tattoos could also serve a protective function by in essence wrapping the body in a spiritual armor. On occasion, tattoos marked significant events. In Hawaii, for example, a tattooed tongue was a sign of grief. The pain the tattooed person endured was a sign of respect for the deceased.

36-15 Tattooed warrior with war club, Nukahiva, Marquesas Islands, Polynesia, early 19th century. Color engraving in Carl Bertuch, *Bilderbuch für Kinder* (Weimar, 1813).

In Polynesia, with its hierarchical social structure, noblemen and warriors accumulated tattoo patterns to enhance their status and beauty. Tattoos wrapped a warrior's body in spiritual armor.

Priests who were specially trained in the art form usually applied the tattoos. Rituals, chants, or ceremonies often accompanied the procedure, which took place in a special structure. Tattooing involves the introduction of black, carbon-based pigment under the skin with the use of a bird-bone tattooing comb or chisel and a mallet. In New Zealand, a distinctive technique emerged for tattooing the face. In a manner similar to Maori woodcarving, a serrated chisel created a groove in the skin to receive pigment, thereby producing a colored line.

Polynesian tattoo designs were predominantly geometric, and affinities with other forms of Polynesian art are evident. For example, the curvilinear patterns found on decorated wall panels (*poupou*) in Maori meetinghouses (FIGS. 36-1 and 36-19A) resemble and make reference to the patterns that predominate in Maori facial moko. Depending on their specific purpose, many tattoos could be "read" or deciphered. For facial tattoos, the Maori generally divided the face into four major, symmetrical zones: the left and right forehead down to the eyes, the left lower face, and the right lower face. The right-hand side conveyed information on the father's rank, tribal affiliations, and social position, whereas the left-hand side provided matrilineal information. Smaller secondary facial zones provided information about the tattooed individual's profession and position in society. Te Pehi Kupe (FIG. I-19) was the chief of the Ngati Toa tribe in the early 19th century. The upward and downward *koru* (unrolled spirals) in the middle of his forehead connote his descent from two paramount tribes. The small design in the center of his forehead documents the extent of his domain—north, south, east, and west. The five double koru in front of his left ear indicate the supreme chief (the highest rank in Maori society) was part of his matrilineal line. The designs on his lower jaw and the anchor-shaped koru nearby reveal Te Pehi Kupe was not only a master carver but descended from master carvers as well.

36-16 A'a, from Rurutu, Austral Islands, Polynesia, late 18th or early 19th century. Wood, 3′ 8″ high. British Museum, London.

A'a is the chief Rurutu ancestor god. Covering his body—and forming the features of his head—are relief figures of his progeny. A large cavity at the back of the statue held 24 more figures.

36-17 Kuka'ilimoku, from Hawaii, Polynesia, late 18th or early 19th century. Wood, 4′ 3¼″ high. British Museum, London.

This wooden statue of the Hawaiian war god comes from a temple. His muscular body is flexed to attack, and his wide mouth with bared teeth set in a large head conveys aggression and defiance.

The wooden statue illustrated here (FIG. 36-16), representing the god A'a, was one of those gifts to the London Missionary Society. A'a was the original inhabitant of Rurutu, the ancestor of all its people. He was deified after his death. Distributed over the front and back of the god's body—and forming the eyes, nose, mouth, and ears of the disk-shaped head—are tiny relief figures of the gods and men A'a created. The sculptor depicted them in a variety of positions, including head downward. At the back of the figure is a large cavity that once contained 24 additional miniature figures. The god places his hands on his belly, a gesture that calls attention to the interior compartment holding his progeny.

Hawaii

The Hawaiians developed the most highly stratified social structure in the Pacific. By 1795, the chief Kamehameha unified the major islands of the Hawaiian archipelago and ascended to the pinnacle

36-18 Head of Lono, from Hawaii, Polynesia, ca. 1775–1780. Human hair, dog's teeth, pearl shells, and feathers over wicker work, 2′ $\frac{3}{4}$″ high. British Museum, London.

Feather heads of the Hawaiian gods with grimacing mouths, such as this one of Lono with human hair, pearl-shell eyes, and dog's teeth, were mounted on poles and carried in processions and into battle.

of power as King Kamehameha I (r. 1810–1819). The kingdom he established did not endure, however, and Hawaii soon came under American control. The United States annexed Hawaii as a territory in 1898 and eventually conferred statehood on the island group in 1959.

KUKA'ILIMOKU As elsewhere in Oceania, the gods were a pervasive presence in Hawaiian society and were part of every person's life, regardless of status. Chiefs in particular invoked them regularly and publicized their genealogical links to the gods to reinforce their right to rule. One of the more prominent Hawaiian deities was Kuka'ilimoku, the war god. As chiefs in the prekingdom years struggled to maintain and expand their control, warfare was endemic—hence the god's importance. Indeed, Kuka'ilimoku served as Kamehameha's special tutelary deity, and the Kuka'ilimoku sculpture illustrated here (FIG. **36-17**) stood in a *heiau* (temple) on the island of Hawaii (Big Island), where Kamehameha I originally ruled before expanding his authority to the entire Hawaiian chain. This late-18th- or early-19th-century Hawaiian wooden temple image, which is more than four feet tall, confronts its audience with a ferocious expression. The war god's head comprises nearly a third of his entire body. His enlarged, angled eyes and wide-open figure-eight-shaped mouth, with its rows of teeth, convey aggression and defiance. His muscular body appears to stand slightly flexed, as if ready to attack. The artist realized this Hawaiian war god's overall athleticism through the full-volumed, faceted treatment of his arms, legs, and the pectoral area of the chest. In addition to sculptures of deities such as this, Hawaiians placed smaller versions of lesser deities and ancestral images in the heiau. Differing styles surface in the various islands of the Hawaiian chain, but the sculptured figures share a tendency toward athleticism and expressive defiance.

LONO Hawaiian artists also fashioned images of their gods from rare bird feathers and other natural materials placed over a wickerwork armature. The head illustrated here (FIG. **36-18**), which incorporates pearl shells for eyes as well as human hair and dog's teeth, is one of five heads in the British Museum that Captain James Cook (1728–1779) took back to England after his third voyage to the South Pacific from 1776 to 1779. The Hawaiian feather heads were sacred objects and costly to produce because they incorporated feathers from thousands of birds. The Hawaiians believed their gods had feathers covering their flesh. Feathers therefore connoted prestige, and the feather heads were also thought to be faithful reproductions of the deities' appearance. The Hawaiians mounted the gods' heads on poles, displayed them in religious processions, and carried them as standards into battle. When not in use, they were on exhibit in temples under the care of religious officials.

Although very different in material and overall character, the feather heads of the gods share many iconographical and stylistic traits with Hawaiian full-length wooden statues (FIG. 36-17) of gods, especially the larger-than-life grimacing mouths. Scholars believe the heads with large central crests of feathers represent the war god Kuka'ilimoku. The head in the British Museum instead has a crown of parted human hair and probably depicts Lono, the god of agriculture, fertility, and peace.

36-19 Feather cloak, from Hawaii, Polynesia, ca. 1824–1843. Feathers and fiber netting, 4′ 8⅓″ × 8′. Bishop Pauahi Museum, Honolulu.

Costly Hawaiian feather cloaks ('ahu 'ula) such as this one, which belonged to King Kamehameha III, provided the protection of the gods. Each cloak required the feathers of thousands of birds.

FEATHER CLOAKS Because perpetuation of the social structure was crucial to social stability, chiefs' regalia, which visualized and reinforced the hierarchy of Hawaiian society, were a prominent part of artistic production. For example, elegant feather cloaks (*'ahu 'ula*) such as the early-19th-century example shown here (FIG. 36-19) belonged to men of high rank. Every aspect of the 'ahu 'ula reflected the status of its wearer. The materials were exceedingly precious, particularly the red and yellow feathers from the 'i 'iwi, 'apapane, 'o 'o, and mamo birds. Some of these birds yield only six or seven suitable feathers, and because a full-length cloak could require up to 500,000 feathers, the resources and labor required to produce a cloak were extraordinary. The cloak also linked its owner to the gods. The Polynesians associated the plaited fiber base for the feathers with deities. Not only did these cloaks confer the protection of the gods on their wearers, but their dense fiber base and feather matting also provided physical protection. The artists who fashioned the cloaks chanted as they worked, believing the power of the sacred chants permeated the fabric lining. The cloak in FIG. 36-19 originally belonged to King Kamehameha III (r. 1824–1854), who gave it to Commodore Lawrence Kearny of the U.S. frigate *Constellation* in 1843 in gratitude for Kearny's assistance during a temporary occupation of Hawaii.

New Zealand

The Maori of Aotearoa (New Zealand) share many cultural practices with other Polynesian societies. Ancestors and lineage traditionally played an important role, as is evident in the form and decoration of Maori meetinghouses, such as those at Poverty Bay (FIG. 36-1) and at Whakatane (WEPIHA APANUI, lead sculptor; FIG. 36-19A) and in the design of Maori facial moko (see "Tattoo in Polynesia," page 1055, and FIG. 1-19). But as in many other Oceanic cultures, in New Zealand, largely as a result of colonial and missionary intervention in the 18th through 20th centuries, traditional practices were gradually abandoned, and production of many of the art forms illustrated in this chapter ceased. In recent years, however, a new confident cultural awareness has led many Pacific artists to reassert their inherited values with pride and to express them in a resurgence of traditional arts, such as weaving, painting, tattooing, and carving. Today's thriving tourist trade has also contributed to a resurgence of traditional art production.

36-19A Mataatua meetinghouse, Maori, 1871–1875.

CLIFF WHITING In New Zealand, CLIFF WHITING (TE WHANAU-A-APANUI, b. 1936) and others have carried on the historical Maori woodcarving craft. Whiting has achieved renown for his stunning "carved murals" (FIG. 31-11). He and other artists throughout the Pacific islands have championed not only the renewal of native cultural life and its continuity in art but also the education of the young in the values that made the Pacific cultures great. The preservation of native identity will depend on the success of the next generation in making the traditional Oceanic cultures once again their own.

OCEANIA BEFORE 1980

AUSTRALIA AND MELANESIA

- The westernmost Oceanic islands have been populated for at least 40,000 years, but most of the preserved art dates to the last several centuries.
- The Aboriginal art of Australia focuses on ancestral spirits called Dreamings, whom artists represented in an X-ray style showing the internal organs.
- The Asmat of New Guinea avenged a relative's death by headhunting. Before embarking on a raid, they erected bisj poles with carved and painted figures of ancestors and animals.
- The center of every Iatmul village was a saddle-shaped ceremonial men's house representing a woman. Images of clan ancestors decorated the interior.
- Masks figured prominently in many Melanesian cultures. The Elema celebrated water spirits in the festive cycle called Hevehe, which involved ornate masks up to 25 feet tall. The Abelam fashioned yam masks for rituals revolving around their principal crop. In New Ireland, dancers wore tatanua masks representing the spirits of the deceased.
- Seafaring was also a major theme of much Melanesian art. The Trobriand Islanders decorated their canoes with elaborately carved prows and splashboards.

Asmat bisj poles, Irian Jaya, early to mid-20th century

Tatanua mask, Papua New Guinea, 19th to 20th century

MICRONESIA

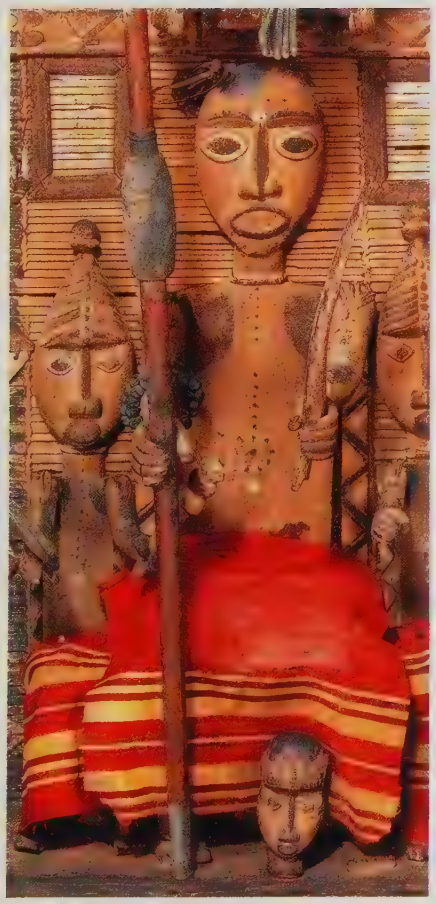
- The major themes of Melanesian art are also found in Micronesia. For example, in the Caroline Islands, many of the most skilled artists carved and painted wooden prow ornaments for their canoes.
- The Micronesian peoples also erected ceremonial men's houses. The bai of Belau are distinctive in having Dilukai figures in the gable of the eastern entrance. The Dilukai is a woman with splayed legs who faces the sun and serves as a symbol of procreation and as a guardian of the house.

Dilukai, Belau, late 19th or early 20th century

POLYNESIA

- Polynesia was one of the last areas of the world humans settled, but the oldest monumental art of Oceania is the series of moai on Rapa Nui (Easter Island). These colossal monolithic sculptures, which stood in rows on stone platforms, probably represent ancestors.
- Barkcloth is an important art form in Polynesia even today. The decorated barkcloth, or ngatu, of Tonga was used to wrap the corpses of deceased chiefs and for other ritual purposes, including the coronation of kings.
- Body adornment in the form of tattooing was widespread in Polynesia, especially in the Marquesas Islands and New Zealand. Beyond personal beautification, tattoos served to distinguish rank and provided warriors with a kind of spiritual armor.
- Meetinghouses played an important role in Polynesian societies, as elsewhere in the Pacific islands. The meetinghouses of the Maori of Aotearoa (New Zealand) are notable for their elaborate ornamentation featuring carved relief panels depicting ancestors.
- Images of named gods are common in Polynesia. Wood sculptures from Rurutu represent the chief ancestor god A'a. The Hawaiians erected statues of the war god Kuka'ilimoku in their temples and fashioned images of deities from rare bird feathers. Hawaiian artists also produced elite regalia using feathers, for example, in cloaks worn exclusively by kings and other men of high rank.

Maori meetinghouse, New Zealand, 1842–1845



Feather cloak, Hawaii, ca. 1824–1843

The name for these screens is *nduen fobara* ("foreheads of the deceased"). The chief's headdress is in the form of a 19th-century European sailing ship, a reference to the deceased's trading business.

To either side of the chief are his attendants and, at the top of the shrine, the heads of his slaves. Both attendants and slaves are smaller in size than the chief, as is appropriate for their lower rank.

Kalabari Ijaw ancestral screens are memorials to the chiefs of trading companies called canoe houses. The deceased, the central figure holding a long staff and curved knife, is also the largest.

1 ft.

37-1 **Ancestral screen (nduen fobara), Kalabari Ijaw, Nigeria, late 19th century. Wood, fiber, and cloth, 3′ 9½″ high. British Museum, London.**

The chief is bare-chested with colorful drapery covering the lower part of his body. At his feet are the heads of conquered rivals, completing the exceptionally rich iconographical program.

37

AFRICA, 1800 TO 1980

KALABARI IJAW ANCESTRAL SCREENS

Throughout the continent, Africans venerate ancestors for the continuing aid they believe they provide the living, including help in maintaining the productivity of the earth for bountiful crop production and ensuring successful hunts. In some African societies, for example, the Fang and Kota, people place the bones of their ancestors in containers guarded by sculptured figures (FIGS. 37-4 and 37-5) in order to protect these treasured relics from theft or harm. In highly stratified societies headed by a monarch, for example, the Benin kingdom, the royal family maintains altars (FIG. 37-13) at which the current king offers animal sacrifices to honor his ancestors and enlist their help in protecting the living and assuring prosperity.

The Kalabari Ijaw peoples have hunted and fished in the eastern delta of the Niger River in present-day Nigeria for several centuries. As in so many other African cultures, Kalabari artists and patrons have lavished attention on memorials to ancestors. Their shrines, however, take a unique form because a cornerstone of the Kalabari economy has long been trade, and trading organizations known locally as "canoe houses" play a central role in Kalabari society. Kalabari ancestor shrines are elaborate screens of wood, fiber, textiles, and other materials. An especially elaborate example (FIG. **37-1**) is the almost four-foot-tall *nduen fobara* (foreheads of the deceased) honoring a former chief of a trading company. The chief's family usually commissioned these memorial screens on or about the one-year anniversary of his death. Displayed in the house in which the chief lived, the screen represents the deceased himself at the center, holding a long silver-tipped staff in his right hand and a curved knife in his left hand. His chest is bare and drapery covers the lower part of his body. His impressive headdress is in the form of a 19th-century European sailing ship, a reference to the chief's successful trading business. Flanking him are his attendants, smaller in size as is appropriate for their lower rank. The heads of his slaves are at the top of the screen and those of his conquered rivals are at the bottom. The hierarchical composition and the stylized rendition of human anatomy and facial features are common in African art, but the richness and complexity of this shrine are exceptional.

Unusual, too, is the way the sculptor created the shrine by assembling it from separately carved sections and then painting it. Most African sculptors fashioned their works from a single block of wood. The carpentry technique employed for the Kalabari screens may be the result of sustained contact with European traders and firsthand knowledge of European woodworking techniques.

19TH CENTURY

Africa (MAP **37-1**) was one of the first art-producing regions of the world (see Chapters 1 and 19), but its early history remains largely undocumented. In fact, a generation ago, scholars still often presented African art as if it had no history. For the period treated in this chapter, however, art historians are on firmer ground. Information gleaned from archaeology and field research in Africa (mainly interviews with local people) has provided much more detail on the use, function, and meaning of art objects produced during the past two centuries than for the period before 1800. As in earlier eras, the arts in Africa are integral to a great variety of human situations, and knowledge of these contexts is essential for understanding the artworks. In Africa, art is nearly always an active agent in the lives of its diverse peoples. This chapter presents a sample of characteristic works from different regions of the continent from the early 19th century to 1980. Chapter 31 treats African art of the past few decades in its worldwide context.

MAP 37-1 Africa in the early 21st century.

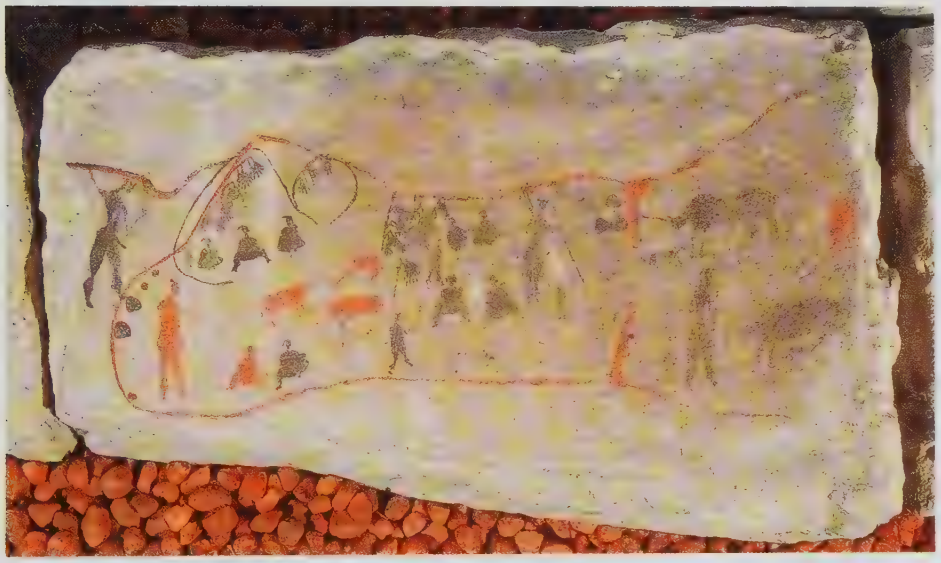
AFRICA, 1800 TO 1980

1800

- San rock paintings record contemporaneous events
- Fang, Kota, and Kalabari Ijaw artists produce reliquary guardian figures and memorial screens to venerate ancestors
- Royal arts include the throne of Bamum king Ngansu and Fon king Glele's bocio of the god Gu
- Yombe, Dogon, and Baule sculptors carve wood groups of mother and child or man and woman

1900

- Royal arts continue to flourish in highly stratified societies, such as the Benin kingdom
- The recording of artists' names becomes more common. Osei Bonsu and Ilowe of Ise achieve wide renown as sculptors
- Throughout the continent, African peoples produce elaborate masks to be danced at masquerades
- Personal adornment is a major art form, including body painting, complex coiffures, rich textiles, and the lavish regalia of kings



1980

San

Rock paintings are among the most ancient arts of Africa (FIGS. 1-3 and 19-2). Yet the tradition also continued well into the historical period. The latest examples date as recently as the 19th century, and some of these depict events involving Europeans. Many examples have been found in South Africa. Some of the most interesting are those produced by the peoples scholars refer to as San, who occupied parts of southwestern Africa in present-day Namibia and Botswana at the time of the earliest European colonization. The San were hunters and gatherers, and their art often centered on the animals they pursued.

BAMBOO MOUNTAIN One of the most impressive preserved San rock paintings (FIGS. **37-2** and **37-3**), originally about eight feet long but now regrettably in fragments, comes from near the source of the Mzimkhulu River at Bamboo Mountain and dates to the mid-19th century. At that time, the increasing development of colonial ranches and the settlements of African agriculturists had greatly affected the lifestyle and movement patterns of San hunters and gatherers, often displacing them from their ancestral lands. In some regions, the San began to raid local ranches for livestock and horses as an alternate food source. The Bamboo Mountain rock painting probably depicts one of a series of stock raids carried out between about 1838 and 1848. Various South African military and police forces unsuccessfully pursued the San raiders. Poor weather, including frequent rains and fog, added to the difficulty of capturing a people who had lived in the region for many generations and knew its terrain intimately.

Reproduced here are two details of the larger, fragmentary composition. On the right side (not illustrated), two San riders on horses laden with meat drive a large herd of cattle and horses toward a San encampment located left of center (FIG. 37-2) and encircled by an outline. Within the camp are various women and children. To the far left (FIG. 37-3), a single figure (perhaps a diviner or rainmaker) leads an eland, an animal the San considered effective in rainmaking and ancestor rituals, toward the encampment. The similarity of this scene to other rock paintings with spiritual interpretations (a human leading an animal) suggests this may represent a ritual leader in a trance state. The leader calls on rain—brought by the intervention of the sacred eland—to foil the attempts of the government soldiers and police to locate and punish the San raiders. The close correspondence between the painting's imagery and the raids of 1838–1848 adds to the likelihood San painters created this work to record contemporaneous events as well as to facilitate rainmaking.

37-2 Stock raid with cattle, horses, and encampment, rock painting, San, from Bamboo Mountain, South Africa, mid-19th century. Natal Museum, Pietermaritzburg.

Rock paintings are among the most ancient arts in Africa, and the tradition continued into the 19th century. This example depicts the 1838–1848 stock raids by San hunters.

37-3 Magical "rain animal," rock painting, San, from Bamboo Mountain, South Africa, mid-19th century. Natal Museum, Pietermaritzburg.

Another fragment of the eight-foot-long rock painting from Bamboo Mountain depicts a man, possibly a diviner in a trance, leading an eland, an animal believed to facilitate rainmaking.

Fang and Kota

Although African works of art are often difficult to date precisely (see "Dating African Art," Chapter 19, page 523), art historians have been able to assign to the 19th century with some confidence a large number of objects that, unlike the Bamboo Mountain rock paintings, lack historical references. These include the Kalabari Ijaw nduen fobara (FIG. 37-1) already discussed and the *reliquary* guardian figures of the Fang and several other migratory peoples just south of the equator in Gabon and Cameroon. The reliquary figures play an important role in ancestor worship. Among both the Fang and the peoples scholars usually refer to as Kota in neighboring areas, ancestor veneration takes material form as collections of cranial and other bones (*relics*) gathered in special containers. These portable reliquaries were ideal for African nomadic population groups such as the Fang and Kota.

FANG BIERI Stylized carved wood human figures (FIG. **37-4**), or in some cases simply heads, protected the Fang relic containers. The sculptors of these Fang guardian figures, or *bieri*, designed them to sit on the edge of cylindrical bark boxes of ancestral bones, ensuring no harm would befall the ancestral spirits. The wood figures are symmetrical, with proportions greatly emphasizing the head, and they feature a rhythmic buildup of forms suggestive of contained power. Particularly striking are the proportions of the bodies of the bieri, which resemble those of an infant, although the muscularity of the figures implies an adult. Scholars believe Fang sculptors chose this combination of traits to suggest the cycle of life, appropriate for an art form connected with the cult of ancestors.

KOTA MBULU NGULU The Kota of Gabon also produced reliquary guardian figures, called *mbulu ngulu* (FIG. **37-5**), but they differ markedly from the Fang bieri. The Kota figures have severely

37-4 Reliquary guardian figure (bieri), Fang, Gabon, late 19th century. Wood, 1′ 8⅜″ high. Philadelphia Museum of Art, Philadelphia.

Bieri guard cylindrical bark boxes of Fang ancestor bones (reliquaries). The figures have the bodies of infants and the muscularity of adults, a combination of traits suggesting the cycle of life.

37-5 Reliquary guardian figure (mbulu ngulu), Kota, Gabon, 19th or early 20th century. Wood, copper, iron, and brass, 1′ 9 1/16″ high. Musée Barbier-Mueller, Geneva.

Kota guardian figures have large heads and bodies in the form of an open diamond. Polished copper and brass sheets cover the wood forms. The Kota believe gleaming surfaces repel evil.

37-6 Throne and footstool of King Nsangu, Bamum, Cameroon, ca. 1870. Wood, textile, glass beads, and cowrie shells, 5′ 9″ high. Museum für Völkerkunde, Staatliche Museen zu Berlin, Berlin.

King Nsangu's throne features luminous beads and shells and richly colored textiles. The decoration includes intertwining serpents, male and female retainers, and bodyguards with European rifles.

stylized bodies in the form of an open diamond below a wood head. The sculptors of these reliquary guardians covered both the head and the abstract body with strips and sheets of polished copper and brass. The Kota believed the gleaming surfaces repel evil. The simplified heads have hairstyles flattened out laterally above and beside the face. Geometric ridges, borders, and subdivisions add a textured elegance to the shiny forms. The copper alloy on most of these images is reworked sheet brass (or copper wire) taken from brass basins originating in Europe and traded into this area of equatorial Africa in the 18th and 19th centuries. The Kota inserted the lower portion of the image into a basket or box of ancestral relics.

Bamum

In addition to celebrating ancestors, much African art glorifies living rulers (see "Art and Leadership in Africa," Chapter 19, page 526). In the kingdom of Bamum in present-day Cameroon, the ruler lived in a palace compound at the capital city of Foumban until its destruction in 1910. Some items of royal regalia survive.

THRONE OF NSANGU The royal arts of Bamum make extensive use of richly colored textiles and luminous materials, such as glass beads and cowrie shells. The ultimate status symbol was the king's throne. The throne illustrated here (FIG. **37-6**), a masterpiece of Bamum art, belonged to King Nsangu (r. 1865–1872 and 1885–1887). Intertwining blue and black serpents decorate the cylindrical seat. Above are the figures of two of the king's retainers, perpetually at his service. One, a man, holds the royal drinking horn. The other is a woman holding a serving bowl in her hands. Below are two of the king's bodyguards wielding European rifles. Dancing figures decorate the rectangular footstool. When the king sat on this throne (compare FIG. 37-23), his rich garments complemented the bright colors of his seat, advertising his wealth and power to all who were admitted to his palace.

Fon

The founding of the Fon kingdom in the present-day Republic of Benin dates to around 1600. Under King Guezo (r. 1818–1858), the Fon became a regional power with an economy based largely on trade in palm oil. In 1900, the French dismantled the kingdom and brought many artworks to Paris, where they inspired several prominent early-20th-century Western artists (see "Primitivism and Colonialism," Chapter 29, page 846).

KING GLELE After his first military victory, Guezo's son Glele (r. 1858–1889) commissioned a prisoner of war, Akati Akpele Kendo, to make a life-size iron statue (FIG. 37-7) of a warrior, probably Gu, the Fon god of war and iron, for a battle shrine in Glele's palace at Abomey. This *bocio,* or empowerment figure, was the centerpiece of a circle of iron swords and other weapons set vertically into the ground. The warrior strides forward with swords in both hands, ready to do battle. He wears a crown of miniature weapons and tools on his head. The form of the crown echoes the circle of swords around the statue. The Fon believed the bocio protected their king, and they transported it to the battlefield whenever they set out to fight an enemy force. King Glele's iron warrior is remarkable for its size and for the fact that not only is the patron's name known but so too is the artist's name—a rare instance in Africa before the 20th century (see "African Artists," page 1071).

Kongo

The Congo River formed the principal transportation route for the peoples of central Africa during the 19th century, fostering cultural exchanges as well as trade, both among Africans and with Europeans.

YOMBE PFEMBA Some scholars have suggested the mother-and-child groups (*pfemba*) of the Yombe in the Democratic Republic of Congo may reflect the influence of Christian Madonna-and-Child imagery. The Yombe pfemba are not deities, however, but images of Kongo royalty. One masterful 19th-century example (FIG. 37-8) represents a woman with a royal cap, chest scarification, and jewelry. The image may commemorate an ancestor or, more likely, a legendary founding clan mother. The Kongo call some of these figures "white chalk," a reference to the medicinal power of white kaolin clay. Diviners own some of them, and others have been used by women's organizations to treat infertility, but the function of this 19th-century pfemba is uncertain.

NKISI N'KONDI Among the most distinctive African sculptures of the 19th century are Kongo power figures (*nkisi n'kondi*), such as the statue illustrated here (FIG. 37-9), which depicts a man bristling with nails and blades. These images, which trained priests consecrated using precise ritual formulas, embodied spirits believed to heal and give life, or sometimes to inflict harm, disease, or even death. Each figure had its specific role, just as it wore particular medicines—here protruding from the abdomen and featuring a large cowrie shell. The Kongo also activated every image differently. Owners appealed to a figure's forces every time they inserted a nail or blade, as if to prod the spirit to do its work. People invoked other spirits by repeating specific chants, by rubbing the images, or by applying special powders. The roles of power figures varied enormously, from curing minor ailments to stimulating crop growth, from punishing thieves to weakening enemies. Very large standing Kongo figures, such as this one, which is nearly four feet tall, had exceptional ascribed powers and aided entire communities. Although benevolent for their owners, the figures stood at the boundary between life and death, and most villagers held them in awe. As

37-7 Akati Akpele Kendo, Warrior figure (Gu?), from the palace of King Glele, Abomey, Fon, Republic of Benin, 1858–1859. Iron, 5′ 5″ high. Musée du quai Branly, Paris.

This bocio, or empowerment figure, probably representing the war god Gu, was the centerpiece of a circle of iron swords. The Fon believed it protected their king, and they set it up on the battlefield.

37-8 Yombe mother and child (pfemba), Kongo, Democratic Republic of Congo, late 19th century. Wood, glass, glass beads, brass tacks, and pigment, $10\frac{1}{8}''$ high. National Museum of African Art, Washington, D.C.

The mother in this Yombe group wears a royal cap and jewelry and displays her chest scarification. The image may commemorate an ancestor or, more likely, a legendary founding clan mother.

37-9 Nail figure (nkisi n'kondi), Kongo, from Shiloango River area, Democratic Republic of Congo, ca. 1875–1900. Wood, nails, blades, medicinal materials, and cowrie shell, $3'\ 10\frac{3}{4}''$ high. Detroit Institute of Arts, Detroit.

Only priests using ritual formulas could consecrate Kongo power figures, which embody spirits that can heal or inflict harm. The statue has simplified anatomical forms and an oversized head.

is true of the Yombe pfemba group (FIG. 37-8), compared with the sculptures of other African peoples, this Kongo figure is relatively naturalistic, although the carver simplified the facial features and magnified the size of the head for emphasis.

Chokwe

The Chokwe occupy the area of west-central Africa corresponding to parts of northeastern Angola and southwestern Democratic Republic of Congo.

CHIBINDA ILUNGA Local legend claims the Chokwe are the descendants of the widely traveled Chibinda Ilunga, who won fame as a hunter. He married a princess named Lueji, who was a hereditary ruler of one of the kingdoms of the Lunda Empire, an important regional power during the 16th through 19th centuries. Lueji gave Chibinda a sacred bracelet, the basis and symbol of her rule, and he taught the Lunda to be great hunters, enriched the kingdom, and extended its territory. The Chokwe, one of the population groups resulting from that territorial expansion, became skilled elephant hunters and ivory traders. They eventually revolted against the Lunda kings and brought about the collapse of the Lunda Empire in the mid-19th century.

The Chokwe revere Chibinda Ilunga as founder, hunter, and civilizing hero, and he figures prominently in their royal arts. The statue illustrated here (FIG. 37-10) is one of the finest examples. It shows the legendary hunter-king wearing a chief's barkcloth-and-rattan headdress and holding a staff in his right hand and, in his left hand, a medicine horn containing powerful substances to aid hunters. The sculptor portrayed Chibinda with a muscular body and oversized arms and feet to underscore the hunter's manual dexterity and ability to undertake long journeys. A rare feature of this and other Chokwe figures is the use of human hair for Chibinda's beard.

1 in.

37-10 Chibinda Ilunga, Chokwe, from Angola or Democratic Republic of Congo, late 19th to 20th century. Wood and human hair, 1′ 4″ high. Kimbell Art Museum, Fort Worth.

The Chokwe claim descent from the legendary hunter Chibinda Ilunga, portrayed in art as a muscular man with a chief's headdress, oversized hands and feet, and a beard of human hair.

Dogon

The Dogon live in the Bandiagara escarpment south of the inland delta region of the great Niger River in what is today Mali. Numbering almost 300,000, spread among hundreds of small villages, the Dogon practice farming as their principal occupation.

LINKED MAN AND WOMAN One of the most common themes in African art is the human couple. A Dogon example of exceptional quality is the statue of a linked man and woman reproduced here (FIG. 37-11). It dates to the early 19th century and is probably a shrine or altar, although contextual information is

37-11 Seated couple, Dogon, Mali, ca. 1800–1850. Wood, 2′ 4″ high. Metropolitan Museum of Art, New York (gift of Lester Wunderman).

This Dogon carving of a linked man and woman documents gender roles in traditional African society. The protective man wears a quiver on his back. The nurturing woman carries a child on hers.

1 in.

37-12 Male and female figures, probably bush spirits (asye usu), Baule, Côte d'Ivoire, late 19th or early 20th century. Wood, beads, and kaolin, man 1′ $9\frac{3}{4}$″ high, woman 1′ $8\frac{5}{8}$″ high. Metropolitan Museum of Art, New York (Michael C. Rockefeller Memorial Collection, gift of Nelson A. Rockefeller).

In contrast to the Dogon couple (FIG. 37-11), this pair includes many naturalistic aspects of human anatomy, but the sculptor enlarged the necks, calves, and heads, a form of idealization in Baule culture.

lacking. Interpretations vary, but the image vividly documents primary gender roles in traditional African society. The man wears a quiver on his back. The woman carries a child on hers. Thus, the man assumes a protective role as hunter or warrior, the woman a nurturing role. The slightly larger man reaches behind his mate's neck and touches her breast, as if to protect her. His left hand points to his genitalia. Four stylized figures support the stool upon which they sit. They are probably either spirits or ancestors, but the identity of the larger figures is uncertain.

The strong stylization of Dogon sculptures contrasts sharply with the organic, relatively realistic treatment of the human body in Kongo and Chokwe art (FIGS. 37-8 to 37-10). The artist who carved the Dogon couple (FIG. 37-11) based the forms more on the idea or concept of the human body than on observation of individual heads, torsos, and limbs. The linked body parts are tubes and columns articulated inorganically. The carver reinforced the almost abstract geometry of the overall composition by incising rectilinear and diagonal patterns on the surfaces. The Dogon artist also understood the importance of space, and charged the voids, as well as the sculptural forms, with rhythm and tension.

Baule

The Baule of present-day Côte d'Ivoire do not have kings, and their societies are relatively egalitarian, especially compared with other highly stratified African population groups, but Baule art encompasses many of the same basic themes seen elsewhere on the continent.

BUSH SPIRITS The Baule statues of a man and woman illustrated here (FIG. **37-12**) probably portray bush spirits (*asye usu*). The sculptor most likely carved the pair of wood figures for a trance diviner, a religious specialist who consulted the spirits symbolized by the statues on behalf of clients who were either sick or in some way troubled. In Baule thought, bush spirits are short, horrible-looking, and sometimes deformed creatures, yet Baule sculptors represent them in the form of beautiful, ideal human beings, because ugly figures would offend the spirits and refuse to work for the diviner. Among the Baule, as among many West African peoples, bush or wilderness spirits not only cause difficulties in life but, if properly addressed and placated, also may solve problems or cure sickness. In dance and trance performances—with wood figures and other objects displayed nearby—the diviner can divine, or understand, the will of unseen spirits as well as their needs or prophecies, which the diviner passes on to clients. When not set up outdoors for a performance, the figures and other objects remain in the diviner's house or shrine, where more private consultations take place. In striking contrast to the Dogon sculptor of the seated man and woman (FIG. 37-11), the artist who created this matched pair of Baule male and female images recorded many naturalistic aspects of human anatomy, skillfully translating them into finished sculptural form. At the same time, the sculptor was well aware of creating *waka sran* (people of wood) rather than living beings. Thus, the artist freely exaggerated the length of the figures' necks and the size of their heads and calf muscles, all of which are forms of idealization in Baule culture.

20TH CENTURY

The art of Africa during the past 100 years ranges from traditional works depicting age-old African themes to modern works that are international in both content and style (for example, FIGS. 31-9A and 31-12). Both men and women have long been active in African art production, usually specializing in different types of objects (see "Gender Roles in African Art Production," page 1070).

Benin

Some of the most important 20th-century African artworks come from areas with strong earlier artistic traditions. The kingdom of Benin (see Chapter 19 and FIGS. I-1, 19-1, 19-13, and 19-13A) in present-day Nigeria is a prime example.

SHRINE OF EWEKE II In 1897, when the British sacked Benin City, there were still 17 shrines to ancestors in the Benin

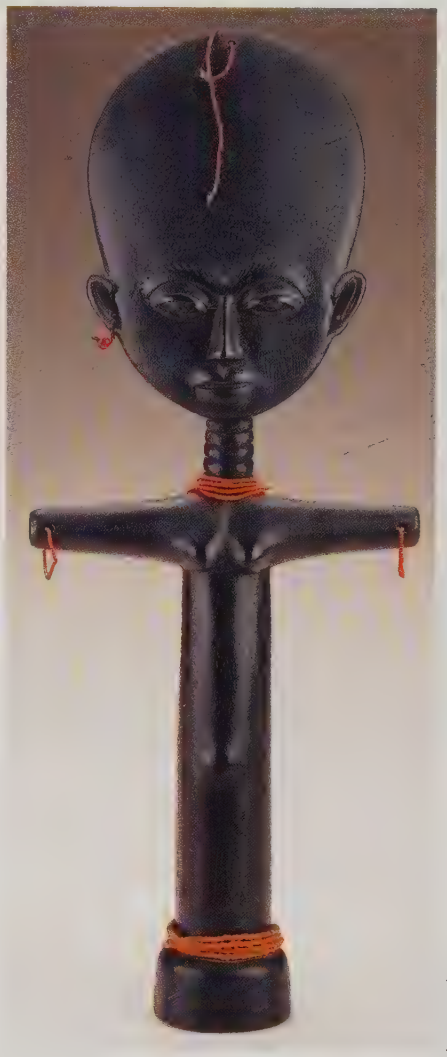
Gender Roles in African Art Production

Until the late 20th century, art production in Africa has been quite rigidly gender-specific. Men have been, and largely still are, ironsmiths and gold and copper-alloy casters. Men were architects, builders, and carvers of both wood and ivory. Women were, and for the most part remain, wall and body painters, calabash decorators, potters, and often clay sculptors, although men make clay figures in some areas. Both men and women work with beads and weave baskets and textiles, with men executing narrow strips (later sewn together) on horizontal looms and women working wider pieces of cloth on vertical looms.

Much African art, however, is collaborative. Men may build a clay wall, for example, but women will normally decorate it. The Igbo people build *mbari* houses (FIG. 37-25)—for ceremonies to honor the earth goddess—that are truly collaborative despite the fact professional male artists model the figures displayed in the houses. Festivals, invoking virtually all the arts, are also collaborative. Masquerades (see "African Masquerades," page 1073) are largely the province of men, yet in some cases women contribute costume elements such as skirts, wrappers, and scarves. Even though women dance masks among the Mende and related peoples (see "Mende Women as Maskers," page 1075), men have always carved the masks themselves.

In late colonial and especially in postcolonial times, earlier gender distinctions in art production began breaking down. Today, women as well as men weave *kente* cloth (FIG. 37-13A), and a number of women are now sculptors in wood, metal, stone, and composite materials. Men are making pottery, once the exclusive prerogative of women. Both women and men make international art forms in urban and university settings, although male artists are more numerous. One well-known Nigerian woman artist, Sokari Douglas Camp (b. 1958), produces welded metal sculptures, sometimes of masqueraders. Douglas Camp is thus doubly unusual. She might find it difficult to do this work in her traditional home in the Niger River delta, but because she lives and works in London, she encounters no adverse response. In the future there will undoubtedly be a further breaking down of restrictive barriers and greater mobility for artists.

royal palace. Today, only one 20th-century altar (FIG. **37-13**) remains. According to oral history, it is similar to centuries-earlier versions. With a base of sacred riverbank clay, it is an assemblage of varied materials, objects, and symbols: a central copper-alloy altarpiece depicting a sacred king flanked by members of his entourage, plus copper-alloy heads, each fitted on top with an ivory tusk carved in relief. Behind are wood staffs and metal bells. The heads represent both the kings themselves and, through the durability of the material, the enduring nature of kingship. Their glistening surfaces, seen as red and signaling danger, repel evil forces that might adversely affect the shrine and thus the king and kingdom. Elephant-tusk relief carvings atop the heads commemorate important events and personages in Benin history. Their bleached white color signifies purity and goodness (probably of royal ancestors), and the tusks themselves represent male physical power. The carved wood rattle-staffs standing at the back refer to generations of dynastic ancestors by their bamboolike, segmented forms. The rattle-staffs and the pyramidal copper-alloy bells serve the important function of calling royal ancestral spirits to rituals performed at the altar.



37-13 Royal ancestral altar of King Eweka II, in the palace in Benin City, Nigeria, photographed in 1970. Clay, copper alloy, wood, and ivory.

This shrine to the heads of royal ancestors is an assemblage of materials, objects, and symbols. By sacrificing animals at this altar, the Benin king annually invokes the collective strength of his ancestors.

African Artists and Apprentices

Traditionally, Africans have tended not to exalt artistic individuality as much as Westerners have. Many people, in fact, still consider African art as anonymous, primarily because early researchers rarely asked for artists' names (see "Dating African Art and Identifying African Artists," Chapter 19, page 523). Nonetheless, art historians can recognize many individual hands or styles even when an artist's name has not been recorded. During the past century, art historians and anthropologists have been systematically noting the names and life histories of specific individual artists, many of whom have strong regional reputations. One of the earliest recorded names is that of the mid-19th-century Fon sculptor and metalsmith Akati Akpele Kendo (FIG. 37-7). Two 20th-century artists, renowned even from one kingdom to another, were Osei Bonsu (FIGS. 37-14 and 37-15), based in the Asante capital of Kumasi, and the Yoruba sculptor called Olowe of Ise (FIGS. 37-16 and 37-16A) because he came from the town of Ise. Both artists were master carvers, producing sculptures for kings and commoners alike.

As did other great artists in other places and times, both Bonsu and Olowe had apprentices to assist them for several years while learning their trade. Although there are various kinds of apprenticeship in Africa, novices typically lived with their masters and were household servants as well as assistant carvers. They helped fell trees, carry logs, and rough out basic shapes the master later transformed into finished work. African sculptors typically worked on commission. Sometimes, as in Bonsu's case, patrons traveled to the home of the artist. But other times, even Bonsu moved to the home of a patron for weeks or months while working on a commission. Masters, and in some instances also apprentices, lived and ate in the patron's compound. Olowe, for example, resided with different kings for many months at a time while he carved doors (FIG. 37-16), veranda posts (FIG. 37-16A), and other works for royal families.

37-14 OSEI BONSU, Akua'ba (Akua's child), Asante, Ghana, ca. 1960. Wood and glass beads, 1′ 2½″ high. National Museum of African Art, Washington, D.C. (gift of Herbert C. Madison).

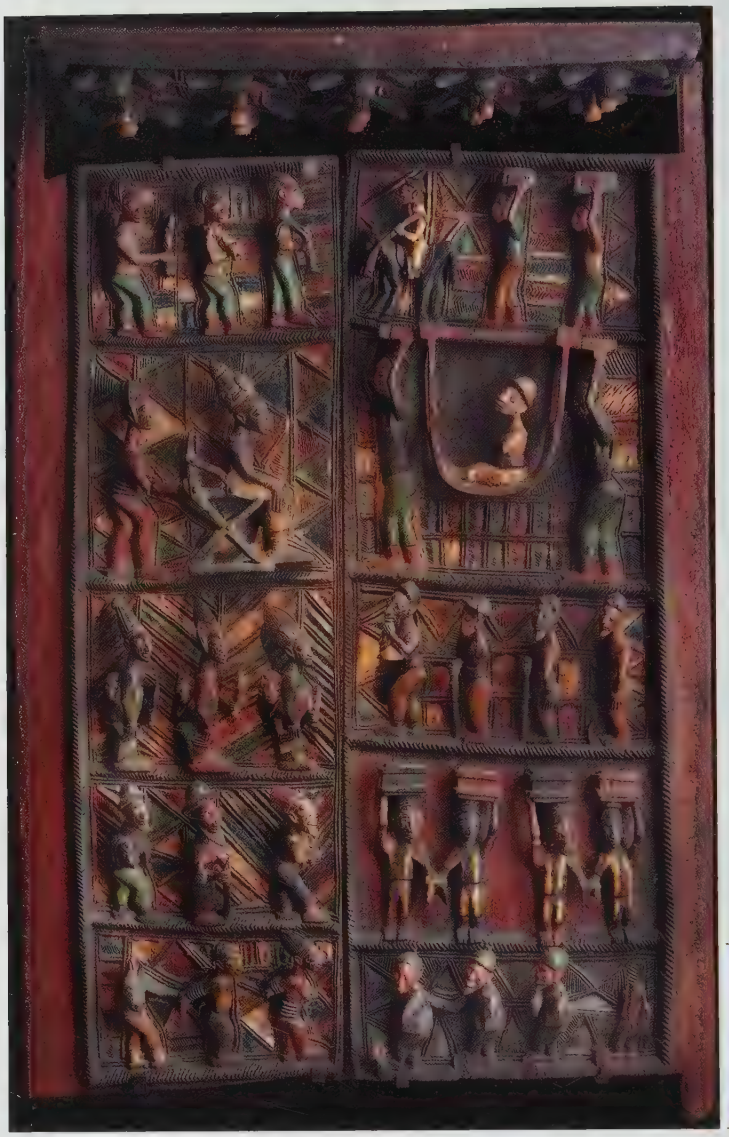
Osei Bonsu was one of Africa's leading sculptors. This figure, carried by women hoping to conceive a child, has a flattened face and crosshatched eyebrows, typical features of the artist's style.

The Benin king's head stands for wisdom, good judgment, and divine guidance for the kingdom. The several heads in the ancestral altar multiply these qualities. By means of animal sacrifices at this site, the living king annually purifies his own head (and being) by invoking the collective strength of his ancestors. Thus the varied objects, symbols, colors, and materials comprising this shrine contribute both visually and ritually to the imaging of royal power, as well as to its history, renewal, and perpetuation. The composition of the shrine, like that of the altar at its center and the mid-18th-century Altar to the Hand and Arm (FIG. 19-1), is hierarchical. At the center of all Benin hierarchies stands the king (FIG. I-1).

Asante

The Asante of modern Ghana formed a strong confederacy around 1700. They are one of several peoples, including the Baule of Côte d'Ivoire, who speak an Akan dialect. Asante artists work in many media but are probably most famous today for vividly colored and patterned *kente* cloth robes (FIG. **37-13A**).

OSEI BONSU A common stylistic characteristic of Asante figural art is the preference for conventionalized, flattened heads. Many Akan peoples considered long, slightly flattened foreheads to be emblems of beauty, and mothers gently molded their children's cranial bones to reflect this value. These anatomical features occur in a wooden image of a young girl (FIG. **37-14**), or *akua'ba* (Akua's child), carved by OSEI BONSU (1900–1976), one of the 20th century's leading African sculptors (see "African Artists and Apprentices," above). After consecrating a simplified wood akua'ba sculpture at a shrine, a young woman hoping to conceive carried it with her. Once pregnant, she continued to carry the figure to ensure the safe delivery of a healthy and handsome child—among these matrilineal people, preferably a girl. Compared with



37-13A Asante noblemen in kente cloth robes, 1972.

37-15 Osei Bonsu, two men sitting at a table of food (linguist's staff), Asante, Ghana, mid-20th century. Wood and gold leaf, section shown 10″ high. Collection of the Paramount Chief of Offinso, Asante.

Bonsu carved this gold-covered wood linguist's staff for someone who could speak for the Asante king. At the top are two men sitting at a table of food—a metaphor for the office of the king.

37-16 Olowe of Ise, doors from the shrine of the king's head in the royal palace, Ikere, Yoruba, Nigeria, 1910–1914. Painted wood, 6′ high. British Museum, London.

These masterfully carved and painted doors to the shrine of the king's head in the Ikere palace are the work of Olowe of Ise, one of the few African artists whose name and career have been recorded.

traditional sculptures of this type, the more naturalistic rendering of the face and crosshatched eyebrows in Osei Bonsu's sculpture are distinctive features of his personal style.

LINGUIST'S STAFF Bonsu also carved the gold-covered wood sculpture (FIG. **37-15**) depicting two men sitting at a table of food. This object, commonly called a *linguist's staff* because its carrier often speaks for a king or chief, has a related proverb: "Food is for its rightful owner, not for the one who happens to be hungry." Food is a metaphor for the office the king or chief rightfully holds. The "hungry" man lusts for the office. The linguist, who is an important counselor and adviser to the king, might carry this staff to a meeting at which a rival contests the king's title to the stool (his throne, the office). Many hundreds of sculptures from this region have proverbs or other sayings associated with them, which has created a rich verbal tradition relating to the visual arts of the Akan peoples.

Yoruba

The Yoruba have a long history in southwestern Nigeria and the southern Republic of Benin going back to the founding of Ile-Ife in the 11th century (see Chapter 19). In the 20th century, Yoruba artists were among the most skilled on the continent. One who achieved international recognition was Olowe of Ise (ca. 1873–1938).

OLOWE OF ISE In 1925, the British Museum acquired directly from the *ogoga* (king) of Ikere (in exchange for a British throne) the elaborately carved and painted doors (FIG. **37-16**) of the shrine of the king's head in his palace in northeastern Yorubaland. At the time, the museum did not inquire about the artist's name. Not until after World War II, when art historians began to document the careers of individual African artists (see "African Artists and Apprentices," page 1071), did the British curators learn the master carver was Olowe of Ise, the most famous Yoruba sculptor of the early 20th century. Kings and aristocrats throughout Yorubaland employed Olowe to carve reliefs, masks, bowls, veranda posts (FIG. **37-16A**), and other works for them, and he traveled widely in

37-16A Olowe of Ise, veranda post, Akure, 1920s.

African Masquerades

The art of masquerade has long been a quintessential African expressive form, laden with meaning and of the highest importance culturally. This is so today, but was even more critically true in colonial times and earlier, when African masking societies boasted extensive regulatory and judicial powers. In stateless societies, such as those of the Senufo (FIGS. 37-17 and 37-18), Dogon (FIG. 37-19), and Mende (FIG. 37-20), masks sometimes became so influential they had their own priests and served as power sources or as oracles. Societies empowered maskers to levy fines and to apprehend witches (usually defined as socially destructive people) and criminals, and to judge and punish them. Normally, however—especially today—masks are less threatening and more secular and educational and serve as diversions from the humdrum of daily life. Masked dancers usually embody either ancestors, seen as briefly returning to the human realm, or various nature spirits called upon for their special powers.

The mask, a costume ensemble's focal point, combines with held objects, music, and dance gestures to invoke a specific named character, almost always considered a spirit. A few masked spirits appear by themselves, but more often several characters come out together or in turn. Maskers enact a broad range of human, animal, and fantastic otherworldly behavior that is usually both stimulating and didactic. Masquerades, in fact, vary in function or effect along a continuum from weak spirit power and strong entertainment value to those rarely seen but possessing vast executive powers backed by powerful shrines. Most operate between these extremes, crystallizing varieties of human and animal behavior—caricatured, ordinary, comic, bizarre, serious, or threatening. Such actions inform and affect audience members because of their dramatic staging. It is the purpose of most masquerades to move people, to affect them, to effect change.

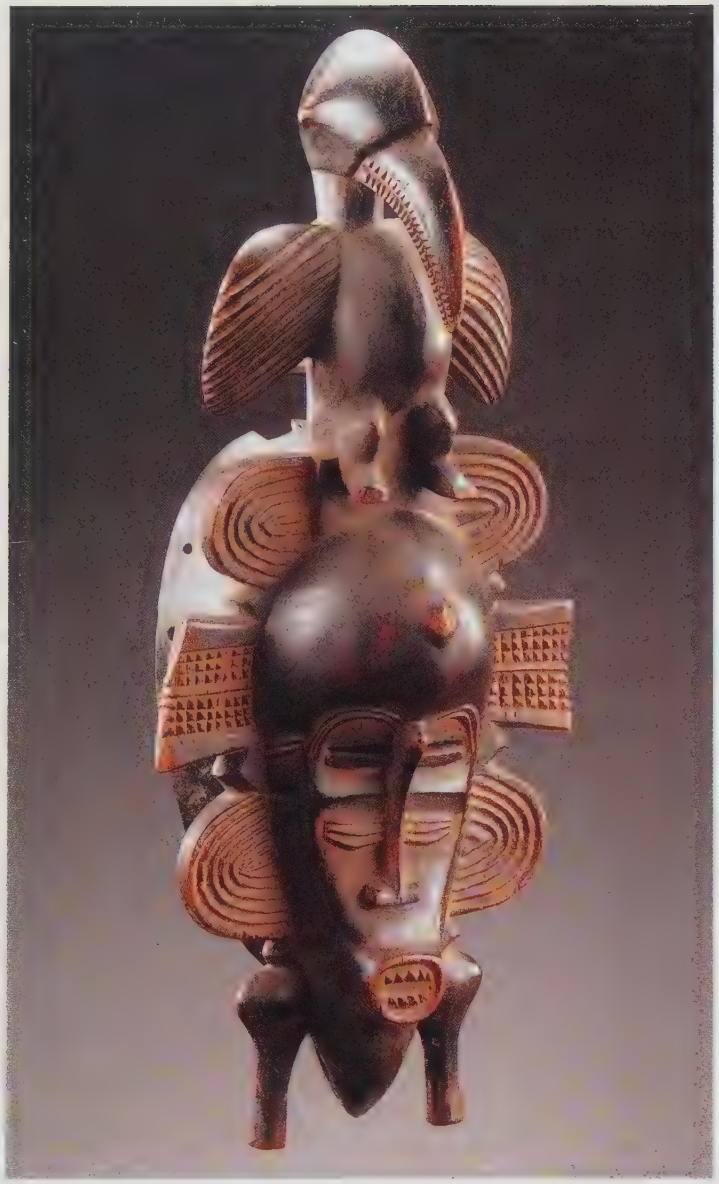
Thus, masks and masquerades are mediators—between men and women, youths and elders, initiated and uninitiated, powers of nature and those of human agency, and even life and death. For many groups in West and Central Africa, masking plays (or once played) an active role in the socialization process, especially for men, who control most masks. Maskers carry boys (and, more rarely, girls) away from their mothers to bush initiation camps, put them through ordeals and schooling, and welcome them back to society as men months or even years later. A second major role is in aiding the transformation of important deceased persons into productive ancestors who, in their new roles, can bring benefits to the living community. Because most masking cultures are agricultural, it is not surprising Africans often invoke masquerades to increase the productivity of the fields, to stimulate the growth of crops, and later to celebrate the harvest.

37-17 Senufo masqueraders, Côte d'Ivoire, photographed ca. 1980–1990.

Senufo masqueraders are always men. Their masks often represent composite creatures incarnating both ancestors and bush powers. They fight malevolent spirits with their aggressively powerful forms.

his homeland to execute those commissions. Between 1910 and 1914 he resided at Ikere while working for the ogoga. The palace shrine doors date from that time.

Departing from convention, Olowe made the two doors of unequal width to accommodate a rare historical narrative in 10 panels in five registers. The reliefs recount the 1897 visit of the representative of the British Empire, Captain Ambrose, commissioner of Ondo province. Litter-bearers carry Ambrose into the palace compound, where the enthroned king, far larger than the British emissary, and his principal wife receive him. The other panels on each door depict the entourage of the two protagonists including, at the left, the king's bodyguards and other wives, and, on the right door, shackled slaves carrying chests. Characteristically for Olowe, the relief is so high some of the figures project as much as six inches from the surface, which has a vividly colored patterned background. Olowe also carved the veranda posts of the courtyard in front of the shrine.



Senufo

The Senufo of the western Sudan region in what is now northern Côte d'Ivoire have a population today of more than a million. They speak several different languages, sometimes even in the same village. Not surprisingly, there are many different Senufo art forms, including mask-making (FIGS. 37-17 and 37-18) and woodcarving (FIG. 37-17A), all closely tied to community life.

MASQUERADES Senufo men dance many masks (see "African Masquerades," above), mostly in the context of Poro, the main association for socialization and initiation, a protracted process taking nearly 20 years for men to complete. Maskers also perform at funerals and other public spectacles. Large Senufo masks (for example,

37-17A Ancient Mother, Senufo, early 20th century.

1 in.

37-18 "Beautiful Lady" dance mask, Senufo, Côte d'Ivoire, late 20th century. Wood, 1′ ½″ high. Musée Barbier-Mueller, Geneva.

Some Senufo men dance female masks such as this one with a hornbill bird rising from the forehead. The female characters are sometimes the wives of the terrorizing male masks (FIG. 37-17).

37-19 Satimbe masquerader, Dogon, Mali, mid- to late 20th century.

Satimbe (sister on the head) masks commemorate the legend describing women as the first masqueraders. The mask's crown is a woman with large breasts and sticklike bent arms.

FIG. 37-17) are composite creatures, combining characteristics of antelope, crocodile, warthog, hyena, and human: sweeping horns, a head, and an open-jawed snout with sharp teeth. These masks incarnate both ancestors and bush powers that combat witchcraft and sorcery, malevolent spirits, and the wandering dead. They are protectors who fight evil with their aggressively powerful forms and their medicines.

At funerals Senufo maskers attend the corpse and help expel the deceased from the village. This is the deceased individual's final transition, a rite of passage parallel to that undergone by all men during their years of Poro socialization, when masks also play a role. When an important person dies, the convergence of several masking groups, as well as the music, dancing, costuming, and feasting of many people, constitute a festive and complex work of art that transcends any one mask or character.

Some men also dance female masks. The most recurrent type has a small face with fine features, several extensions, and varied motifs—a hornbill bird in the illustrated example (FIG. **37-18**)—rising from the forehead. The men who dance these feminine characters also wear knitted body suits or trade-cloth costumes to indicate their beauty and their ties with the order and civilization of the village. They may be called "pretty young girl," "beautiful lady," or "wife" of one of the heavy, terrorizing masculine masks (FIG. 37-17) appearing before or after them.

Dogon

The Dogon (FIG. 37-11) continue to excel at carving wood figures, but many Dogon artists are specialists in fashioning large masks for elaborate cyclical masquerades.

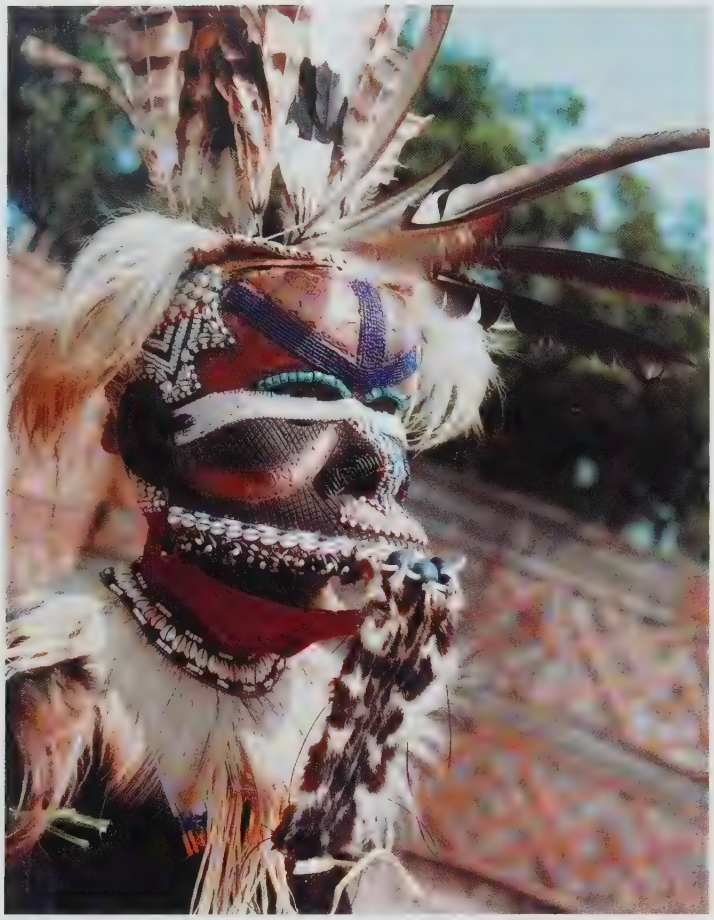
SATIMBE MASKS Dogon masquerades dramatize creation legends. These stories say women were the first ancestors to imitate spirit maskers and thus the first human masqueraders. Men later took over the masks, forever barring women from direct involvement with masking processes. A mask called *Satimbe* (FIG. **37-19**), that is, "sister on the head," seems to represent all women and commemorates this legend. Satimbe masks consist of a roughly rectangular covering for the head with narrow rectangular openings

Mende Women as Maskers

The Mende and neighboring peoples of Sierra Leone, Liberia, and Guinea are distinctive in Africa because the women perform masquerades. The masks (FIG. 37-20) and costumes they wear conceal the women's bodies from the audience attending their performance. The Sande society of the Mende controls the initiation, education, and acculturation of Mende girls. Women leaders who dance the Sande masks serve as priestesses and judges during the three years the women's society controls the ritual calendar (alternating with the men's society in this role), thus serving the community as a whole. Women maskers, who function as initiators, teachers, and mentors, help girl novices with their transformation into educated and marriageable women. Sande women associate their Sowie masks with water spirits and the color black, which the society, in turn, connects with human skin color and the civilized world. The women wear these helmet masks on top of their heads as headdresses, with black raffia and cloth costumes to hide the wearers' identity during public performances. Elaborate coiffures, shiny black color, dainty triangular-shaped faces with slit eyes, rolls around the neck, and real and carved versions of amulets and various emblems on the top commonly characterize Sowie masks (FIG. 37-20). These symbolize the adult women's roles as wives, mothers, providers for the family, and keepers of medicines for use within the Sande association and the society at large.

Sande members commission the masks from male carvers, with the carver and patron together determining the type of mask needed for a particular societal purpose. The Mende often keep, repair, and reuse masks for many decades, thereby preserving them as models for subsequent generations of carvers.

37-20 Female mask, Mende, Sierra Leone, mid- to late 20th century. Painted wood, 1′ 2½″ high. Fowler Museum of Cultural History, University of California, Los Angeles (gift of the Wellcome Trust).



This Mende mask refers to ideals of female beauty, morality, and behavior. The large forehead signifies wisdom, the neck design beauty and health, and the plaited hair the order of ideal households.

for the eyes and a crowning element, much larger than the mask proper, depicting a schematic woman with large protruding breasts and sticklike bent arms. In ceremonies called Dama, held every several years to honor the lives of people who have died since the last Dama, Satimbe is among the dozens of different masked spirit characters escorting dead souls away from the village. The deceased are sent off to the land of the dead where, as ancestors, they will be enjoined to benefit their living descendants and stimulate agricultural productivity.

Mende

The Mende are farmers who occupy the Atlantic coast of Africa in Sierra Leone. Although men own and perform most masks in Africa, in Mende society women control and dance Sande society masks (see "Mende Women as Maskers," above), while Mende men perform the Poro society masks.

SOWIE MASKS The glistening black surface of Mende Sowie masks (FIG. 37-20) evokes female spirits newly emergent from their underwater homes (also symbolized by the turtle on top). The mask and its parts refer to ideals of female beauty, morality, and behavior. A high broad forehead signifies wisdom and success. The neck ridges have multiple meanings. They are signs of beauty, good health, and prosperity and also reference the ripples in the water from which the water spirits emerge. Intricately woven or plaited hair is the essence of harmony and order found in ideal households. A small closed mouth and downcast eyes indicate the silent, serious demeanor expected of recent initiates.

37-21 Bwoom masquerader, Kuba, Democratic Republic of Congo, photographed ca. 1950.

At Kuba festivals, masqueraders reenact creation legends involving Bwoom, Mwashamboy, and Ngady Amwaash. The first two characters are males who vie for the attention of Ngady, the first female ancestor.

37-22 Ngady Amwaash mask, Kuba, Democratic Republic of Congo, late 19th or early 20th century. Peabody Museum of Archaeology and Ethnology, Harvard University, Cambridge.

Ngady's mask incorporates beads, shells, and feathers in geometric patterns. The stripes on her cheeks are tears from the pain of childbirth after incest with her father, represented by the Mwashamboy mask.

Kuba

The Kuba have been well established in the Democratic Republic of Congo since at least the 16th century. They represent almost 20 different ethnic groups who all recognize the authority of a single king.

BWOOM AND NGADY AMWAASH At the court of Kuba kings, three masks, known as Mwashamboy, Bwoom, and Ngady Amwaash, represent legendary royal ancestors. Mwashamboy symbolizes the founding ancestor, Woot, and embodies the king's supernatural and political powers. Bwoom (FIG. 37-21), with its bulging forehead, represents a legendary dwarf or pygmy who signifies the indigenous peoples on whom kingship was imposed. Bwoom also vies with Mwashamboy for the attention of the beautiful ancestress, Ngady Amwaash (FIG. 37-22), who symbolizes both the first woman and all women. On her cheeks are striped tears from the pain of childbirth, and because to procreate, Ngady must commit incest with her father, Woot. These three characters reenact creation stories during royal initiation ceremonies. The masks and their costumes, with elaborate beads, feathers, animal pelts, cowrie shells, cut-pile cloth, and ornamental trappings, as well as geometric patterning, make for a sumptuous display at Kuba festivals.

KING KOT A-MBWEEKY III Throughout history, African costumes have been laden with meaning and have projected messages all members of the society could read. A photograph (FIG. 37-23) taken in 1970 shows Kuba King Kot a-Mbweeky III (r. 1969–) seated in state before his court, bedecked in a dazzling multimedia costume with many symbolic elements. The king commissioned the costume he wears and now has become art himself. Eagle feathers, leopard skin, cowrie shells, imported beads, raffia, and other materials combine to overload and expand the image of the man, making him larger than life and most certainly a work of art. He is an assemblage. He holds not one but two weapons, symbolic of his military might and underscoring his wealth, dignity, and grandeur. The man, with his regalia, embodies the office of sacred kingship. He is a superior being, in fact and figuratively, raised upon a dais, flanked by ornate drums, with a treasure basket of sacred relics by his left foot. The geometric patterns on the king's costume and nearby objects, and the abundance and redundancy of rich materials, epitomize the opulent style of Kuba court arts.

Samburu

In addition to wearing masks and costumes on special occasions, people in many rural areas of eastern Africa, including the Samburu in northern Kenya, continue to embellish their own bodies.

BODY ADORNMENT The Samburu men and women shown in FIG. 37-24 at a spontaneous dance have distinct styles of personal decoration. Men, particularly warriors who are not yet married, expend hours creating elaborate hairstyles for one another. They paint their bodies with red ocher and wear bracelets, necklaces, and other bands of beaded jewelry made for them by young women. For themselves, women fashion more lavish constellations

37-23 Kuba King Kot a-Mbweeky III during a display for photographer and filmmaker Eliot Elisofon in 1970, Mushenge, Democratic Republic of Congo.

Eagle feathers, leopard skin, cowrie shells, imported beads, raffia, and other materials combine to make the Kuba king larger than life. He is a collage of wealth, dignity, and military might

of beaded collars, which they mass around their necks. As if to help separate the genders, women shave their heads and adorn them with beaded headbands. Personal decoration begins in childhood, increasing to become lavish and highly self-conscious in young adulthood and diminishing as people age. Much of the decoration contains coded information—age, marital or initiation status, parentage of a warrior son—that can be read by those who know the codes. Dress ensembles have evolved over time. Different colors and sizes of beads became available, as did plastics and aluminum, and specific fashions have changed, but the overall concept of fine personal adornment—that is, dress raised to the level of art—remains much the same today as it was centuries ago.

Igbo

The Igbo of the Lower Niger region in present-day Nigeria have a distinguished artistic tradition dating back more than a thousand years (see Chapter 19). The arts still play a vital role in Igbo society today.

MBARI HOUSES The powerful nature gods of the Igbo demand about every 50 years that a community build an *mbari* house. The Igbo construct these houses from mud as sacrifices to major deities, often Ala, goddess of the earth. The houses are elaborate unified artistic complexes incorporating numerous unfired clay sculptures and paintings—occasionally more than a hundred in a single mbari house. At Umugote Orishaeze, near Owerri,

37-24 Samburu men and women dancing, northern Kenya, photographed in 1973.

Men and women in many rural areas of Africa paint their bodies and wear elaborate hairstyles and beaded jewelry. This personal adornment reveals their age, marital status, and parentage.

37-25 Ala and Amadioha, painted clay sculptures in an mbari house, Igbo, Umugote Orishaeze, Nigeria, photographed in 1966.

The Igbo build mud mbari houses to the earth goddess Ala. The painted statues inside this one represent Ala in traditional dress with body paint and the thunder god Amadioha in modern dress.

one mbari house contains, among many others, two sculptures (FIG. 37-25) depicting Ala and her consort, the thunder god Amadioha. The god wears modern clothing, whereas Ala appears with traditional body paint and a fancy hairstyle. These differing modes of dress relate to Igbo concepts of modernity and tradition, both viewed as positive by the men who control the ritual and art. They allow themselves modern attire but want their women to remain traditional. The artist enlarged and extended the torso, neck, and head of both figures to express their aloofness, dignity, and power. More informally posed figures and groups appear on the other sides of the house, including beautiful, amusing, or frightening figures of animals, humans, and spirits taken from mythology, history, dreams, and everyday life—a kaleidoscope of subjects and meanings. The mbari construction process, veiled in secrecy behind a fence, is a stylized world-renewal ritual. Ceremonies for unveiling the house to public view indicate Ala has accepted the sacrificial offering (of the mbari) and, for a time at least, will be benevolent. An mbari house never undergoes repair. Instead, the Igbo allow it to disintegrate and return to its source, the earth.

Contemporary Art

The art forms of contemporary Africa vary immensely and defy easy classification. Those of international character with strong Western influence are discussed in Chapter 31. Others, for example, the Dogon men's house treated here, testify to the continuing vitality of traditional African art in the 21st century.

DOGON TOGU NA Traditionalism and modernism unite in the Dogon *togu na,* or "men's house of words." The togu na is so called because men's deliberations vital to community welfare take place under its sheltering roof. The Dogon consider it the "head" and the most important part of the community, and they characterize the togu na with human attributes. The Dogon build the men's houses over time. Earlier posts, such as the central one in the illustrated togu na (FIG. 37-26), show schematic renderings of legendary female ancestors, similar to stylized ancestral couples (FIG. 37-11) or masked figures (FIG. 37-19). Recent replacement posts display narrative and topical scenes of varied subjects, such as horsemen or hunters or women preparing food, and feature abundant descriptive detail, bright polychrome painting in enamels, and even some writing. Unlike earlier traditional sculptors, the contemporary artists who made these posts want to be recognized, and they are eager to sell their work (other than these posts) to tourists.

AFRICAN ART TODAY During the past two centuries and especially in recent decades, the encroachments of Christianity, Islam, Western education, and market economies have led to increasing secularization in all the arts of Africa. Many figures and masks earlier commissioned for shrines or as incarnations of ancestors or spirits are now made mostly for sale to outsiders, essentially as tourist arts. They are also sold in art galleries abroad as collector's items for display. In towns and cities, painted murals and cement sculptures appear frequently, often making implicit comments about modern life. Nonetheless, despite the growing importance of urbanism, most African people still live in rural communities. Traditional values, although under pressure, hold considerable force in villages especially, and some people adhere to spiritual beliefs that uphold traditional art forms. African art remains as varied as the vast continent itself and continues to evolve.

37-26 Togu na (men's house of words), Dogon, Mali, photographed in 1989.

Dogon men hold their communal deliberations in a togu na. The posts of this one are of varied date. The oldest have traditional carvings, and the newest feature polychrome narrative or topical paintings.

AFRICA, 1800 TO 1980

19TH CENTURY

Throne of King Nsangu, Bamum, ca. 1870

- Most of the traditional forms of African art continued into the 19th century. Among these are sculptures and shrines connected with the veneration of ancestors. Wood or metal-covered wood figures guarded Fang and Kota reliquaries. Especially elaborate are some Kalabari Ijaw screens with figures of a deceased chief, his retainers, and the heads of his slaves and conquered rivals.

- The royal arts also flourished in the 19th century. The ultimate status symbol was the ruler's throne, for example the throne of King Nsangu of Bamum, which makes extensive use of richly colored textiles and glass beads, cowrie shells, and other luminous materials.

Kongo power figure, ca. 1875–1900

- One of the earliest African artists whose name survives is Akati Akpele Kendo, who worked for the Fon king Glele around 1858, but until the later 20th century, most African art remains anonymous.

- Throughout history, African artists have been masters of woodcarving. Especially impressive examples are the Kongo power figures bristling with nails and blades, and the Dogon and Baule sculptures of male and female couples. Although stylistically diverse, most African sculpture exhibits hierarchy of scale, both among figures and within the human body. For example, enlarged heads are common features of African statues.

20TH CENTURY

Benin ancestral altar, photographed in 1970

- As in the 19th century, traditional arts flourished in 20th-century Africa. These include multimedia shrines, such as the ancestral altar of King Eweka II of Benin.

- The names of many more individual 20th-century artists are known. Two of the most famous are the Asante sculptor Osei Bonsu and the Yoruba sculptor Olowe of Ise.

Bonsu, linguist's staff, mid-20th century

- Osei Bonsu worked for kings and commoners alike, carving both single figures and groups, sometimes for the linguist's staff of a leader's spokesman. The distinctive features of his style are the flattened faces and crosshatched eyebrows of his figures.

- Olowe of Ise won renown for the painted wood doors and multifigure veranda posts he carved for houses and palaces. Elongated bodies and finely textured detail characterize his sculptures, both in relief and in the round.

Mende female mask, mid- to late 20th century

- In Africa, art is nearly always an active agent in the lives of its peoples. A major African art form is the fashioning of masks for festive performances. Masqueraders are almost always men, even when the masks they dance are female, as among the Senufo, Dogon, and Kuba, but in Mende society, women are maskers too.

- Africans have also traditionally lavished attention on costume and jewelry and other forms of body adornment such as elaborate coiffures and body painting. The decoration often contains coded information about age, status, and parentage. Royal costumes consisting of animal skins, feathers, shells, beads, and raffia, and symbols of power such as crowns, swords, and scepters make kings seem larger than they really are in life.

NOTES

Introduction

1. Quoted in George Heard Hamilton, *Painting and Sculpture in Europe, 1880–1940,* 6th ed. (New Haven, Conn.: Yale University Press, 1993), 345.
2. Quoted in *Josef Albers: Homage to the Square* (New York: Museum of Modern Art, 1964), n.p.

Chapter 2

1. Translated by Françoise Tallon, in Prudence O. Harper et al., *The Royal City of Susa* (New York: Metropolitan Museum of Art, 1991), 132.

Chapter 3

1. The chronology adopted in this chapter is that of John Baines and Jaromír Malék, *Atlas of Ancient Egypt* (Oxford: Oxford University Press, 1980), 36–37. The division of kingdoms is that of, among others, Mark Lehner, *The Complete Pyramids* (New York: Thames & Hudson, 1997), 89, and David P. Silverman, ed., *Ancient Egypt* (New York: Oxford University Press, 1997), 20–39.
2. Translated by James P. Allen, *The Ancient Egyptian Pyramid Texts* (Atlanta, Ga.: Society of Biblical Literature, 2005), 31.
3. Allen, 57.
4. Allen, 56.

Chapter 4

1. Homer, *Iliad,* 2.466–649.

Chapter 5

1. Diodorus Siculus, *Library of History,* 1.91.
2. Pausanias, *Description of Greece,* 5.16.1.
3. Plutarch, *Life of Pericles,* 12.
4. Pliny, *Natural History,* 34.74.
5. Ibid., 36.20.
6. Lucian, *Amores,* 13–14; *Imagines,* 6.
7. Plutarch, *Moralia,* 335A–B. Translated by J. J. Pollitt, *The Art of Ancient Greece: Sources and Documents* (New York: Cambridge University Press, 1990), 99.
8. Pliny, *Natural History,* 35.110.
9. Ibid., 34.88.

Chapter 7

1. Livy, *History of Rome,* 25.40.1–3.
2. Juvenal, *Satires,* 3.225, 232.

Chapter 8

1. Translated by Raymond Davis, *The Book of Pontiffs* (Liverpool: Liverpool University Press, 1989), 18–19.

Chapter 9

1. Paulus Silentiarius, *Descriptio Sanctae Sophiae,* 617–646. Translated by Cyril Mango, *The Art of the Byzantine Empire, 312–1453: Sources and Documents* (reprint of 1972 ed., Toronto: University of Toronto Press, 1986), 85–86.
2. Procopius, *De aedificiis,* 1.1.23ff. Translated by Mango, 74.
3. Paulus Silentiarius, *Descriptio,* 489, 668. Translated by Mango, 83, 86.
4. Translated by Colin Luibheid, *Pseudo-Dionysius: The Complete Works* (New York: Paulist Press, 1987), 68ff.
5. Procopius, 1.1.23ff. Translated by Mango, 75.
6. *Libri Carolini,* 4.2. Translated by Herbert L. Kessler, *Spiritual Seeing: Picturing God's Invisibility in Medieval Art* (Philadelphia: University of Pennsylvania Press, 2000), 119.
7. Nina G. Garsoïan, "Later Byzantium," in John A. Garraty and Peter Gay, eds., *The Columbia History of the World* (New York: Harper & Row, 1972), 453.
8. Garsoïan, 460.

Chapter 11

1. Translated by Françoise Henry, *The Book of Kells* (New York: Alfred A. Knopf, 1974), 165.
2. *Beowulf,* 3162–3164. Translated by Kevin Crossley-Holland (New York: Farrar, Straus & Giroux, 1968), 119.
3. *Beowulf,* 33.
4. Translated by John W. Williams, in *The Art of Medieval Spain A.D. 500–1200* (New York: Metropolitan Museum of Art, 1993), 156.
5. Translated by Adam S. Cohen, *The Uta Codex* (University Park: Pennsylvania University Press, 2000), 11, 41.

Chapter 12

1. Translated by Calvin B. Kendall, *The Allegory of the Church: Romanesque Portals and Their Verse Inscriptions* (Toronto: University of Toronto Press, 1998), 207.
2. Translated by John Williams, *A Spanish Apocalypse: The Morgan Beatus Manuscript* (New York: George Braziller, 1991), 223.
3. Translated by Charles P. Parkhurst Jr., in Elizabeth G. Holt, *A Documentary History of Art* (Princeton, N.J.: Princeton University Press, 2d ed., 1981), 1: 18.
4. Translated by Giovanna De Appolonia, Boston University.
5. Bernard of Clairvaux, *Apologia* 12.28. Translated by Conrad Rudolph, *The "Things of Greater Importance": Bernard of Clairvaux's* Apologia *and the Medieval Attitude toward Art* (Philadelphia: University of Pennsylvania Press, 1990), 281, 283.
6. *Rule of Saint Benedict,* 57.1. Translated by Timothy Fry, *The Rule of St. Benedict* (Collegeville, Minn.: Liturgical Press, 1981), 265.

Chapter 13

1. Giorgio Vasari, "Introduzione alle tre arti del disegno" (1550), ch. 3, in Paul Frankl, *The Gothic: Literary Sources and Interpretation through Eight Centuries* (Princeton, N.J.: Princeton University Press, 1960), 290–291, 859–860.
2. Dante, *Divine Comedy,* Purgatory, 11.81.
3. Translated by Roland Behrendt, *Johannes Trithemius, In Praise of Scribes: De laude scriptorum* (Lawrence, Kansas: Coronado Press, 1974), 71.
4. Frankl, *The Gothic,* 55.

Chapter 20

1. Francisco de Hollanda, *De pintura antigua* (1548), quoted in Robert Klein and Henri Zerner, *Italian Art, 1500–1600: Sources and Documents* (Englewood Cliffs, N.J.: Prentice-Hall, 1966), 33.

Chapter 21

1. Ghiberti, *I commentarii,* II. Quoted in Elizabeth Gilmore Holt, ed., *A Documentary History of Art, I: The Middle Ages and the Renaissance* (Princeton, N.J.: Princeton University Press, 1981), 157–158.
2. Translated by Catherine Enggass, in Howard Saalman, ed., *Antonio Manetti, Life of Brunelleschi* (University Park: Pennsylvania State University Press, 1970), 42.
3. Giorgio Vasari, *Life of Lorenzo Ghiberti.* Translated by Gaston du C. de Vere, ed., *Giorgio Vasari, Lives of the Painters, Sculptors, and Architects* (New York: Knopf, 1996), 1: 304.
4. Ghiberti, *I commentarii,* II. Quoted in Holt, 161.
5. Quoted in H. W. Janson, *The Sculpture of Donatello* (Princeton, N.J.: Princeton University Press, 1965), 154.
6. Vasari, *Life of Masaccio.* Translated by Gaston du C. de Vere, 1: 318.
7. Martial, *Epigrams,* 10.32.

Chapter 22

1. Plato, *Ion,* 534. Translated by Benjamin Jowett, *The Dialogues of Plato,* 4th ed., vol. 1 (Oxford: Clarendon Press, 1953), 107–108.
2. Da Vinci to Ludovico Sforza, ca. 1480–1481. In Elizabeth Gilmore Holt, ed., *A Documentary History of Art* (Princeton: Princeton University Press, 1981), I: 274–275.
3. Quoted in Anthony Blunt, *Artistic Theory in Italy,* 1450–1600 (London: Oxford University Press, 1964), 34.
4. Quoted in James M. Saslow, *The Poetry of Michelangelo: An Annotated Translation* (New Haven, Conn.: Yale University Press, 1991), 407.
5. Giorgio Vasari, *Lives of the Painters, Sculptors, and Architects.* Translated by Gaston du C. de Vere (New York: Knopf, 1996), 2: 736.
6. Quoted in A. Richard Turner, *Renaissance Florence: The Invention of a New Art* (New York: Abrams, 1997), 163.
7. Quoted in Bruce Boucher, *Andrea Palladio: The Architect in His Time* (New York: Abbeville Press, 1998), 229.
8. Quoted in Robert J. Clements, *Michelangelo's Theory of Art* (New York: New York University Press, 1961), 320.

Chapter 23

1. Translated by Erwin Panofsky, in Wolfgang Stechow, *Northern Renaissance Art 1400–1600: Sources and Documents* (Evanston, Ill.: Northwestern University Press, 1989), 123.
2. Translated by Bernhard Erling, in Stechow, 129–130.
3. Giorgio Vasari, *Lives of the Painters, Sculptors, and Architects.* Translated by Gaston du C. de Vere (New York: Knopf, 1996), 2: 863.

Chapter 24

1. Filippo Baldinucci, *Vita del Cavaliere Giovanni Lorenzo Bernini* (1681). Translated by Robert Enggass, in Enggass and Jonathan Brown, *Italian and Spanish Art 1600–1750: Sources and Documents* (Evanston, Ill.: Northwestern University Press, 1992), 116.
2. John Milton, *Il Penseroso* (1631, published 1645), 166.

Chapter 25

1. Quoted in Julie Berger Hochstrasser, *Still Life and Trade in the Dutch Golden Age* (New Haven, Conn.: Yale University Press, 2007), 16.
2. Translated by Kristin Lohse Belkin, *Rubens* (London: Phaidon, 1998), 47.
3. Albert Blankert, *Johannes Vermeer van Delft 1632–1675* (Utrecht: Spectrum, 1975), 133, no. 51. Translated by Bob Haak, *The Golden Age: Dutch Painters of the Seventeenth Century* (New York: Abrams, 1984), 450.

Chapter 26

1. Translated by Robert Goldwater and Marco Treves, eds., *Artists on Art,* 3d ed. (New York: Pantheon Books, 1958), 157.
2. Quoted in Thomas A. Bailey, *The American Pageant: A History of the Republic,* 2d ed. (Boston: Heath, 1961), 280.
3. Translated by Elfriede Heyer and Roger C. Norton, in Charles Harrison, Paul Wood, and Jason Gaiger, eds., *Art in Theory 1648–1815: An Anthology of Changing Ideas* (Oxford: Blackwell, 2000), 451–453.

Chapter 27

1. Théophile Gautier, *Histoire de Romantisme* (Paris: Charpentier, 1874), 204.
2. Quoted in Helmut Borsch-Supan, *Caspar David Friedrich* (New York: Braziller, 1974), 7.
3. Translated by Jason Gaiger, in Charles Harrison, Paul Wood, and Jason Gaiger, eds., *Art in Theory 1815–1900: An Anthology of Changing Ideas* (Oxford: Blackwell, 1998), 54.
4. Quoted by Brian Lukacher, in Stephen F. Eisenman, ed., *Nineteenth Century Art: A Critical History* (New York: Thames & Hudson, 2007), 126.
5. Quoted in John W. McCoubrey, *American Art 1700–1960: Sources and Documents* (Upper Saddle River, N.J.: Prentice Hall, 1965), 98.
6. Quoted in Thomas A. Bailey, *The American Pageant: A History of the Republic,* 2d ed. (Boston: Heath, 1961), 280.
7. Quoted in Linda Nochlin, *Realism and Tradition in Art 1848–1900* (Upper Saddle River, N.J.: Prentice Hall, 1966), 42.
8. Quoted in George Heard Hamilton, *Manet and His Critics* (New Haven, Conn.: Yale University Press, 1954), 45.
9. Quoted in Eisenman, ed., *Nineteenth Century Art,* 336.
10. *New York Weekly Tribune,* September 30, 1865.
11. Quoted in Nikolai Cikovsky Jr. and Franklin Kelly, *Winslow Homer* (Washington, D.C.: National Gallery of Art, 1995), 26.
12. Quoted in Lloyd Goodrich, *Thomas Eakins, His Life and Work* (New York: Whitney Museum of American Art, 1933), 51–52.
13. Quoted in Nicholas Pevsner, *An Outline of European Architecture* (Baltimore: Penguin, 1960), 627.
14. Letter from Delaroche to François Arao, quoted in Helmut Gernsheim, *Creative Photography* (New York: Bonanza Books, 1962), 24.
15. Quoted in Naomi Rosenblum, *A World History of Photography,* 4th ed. (New York: Abbeville Press, 2007), 69.
16. Quoted in Kenneth MacGowan, *Behind the Screen* (New York: Delta, 1965), 49.

Chapter 28

1. Quoted in Linda Nochlin, *Realism* (Harmondsworth: Penguin, 1971), 28.
2. Clement Greenberg, "Modernist Painting," *Art and Literature,* no. 4 (Spring 1965): 193–194.
3. Quoted in Linda Nochlin, *Impressionism and Post-Impressionism 1874–1904: Sources and Documents* (Englewood Cliffs, N.J.: Prentice Hall, 1966), 35.
4. Translated by Carola Hicks, in Charles Harrison, Paul Wood, and Jason Gaiger, *Art in Theory 1815–1900* (Oxford: Blackwell, 1998), 595.
5. Quoted in John McCoubrey, *American Art 1700–1960: Sources and Documents* (Englewood Cliffs, N.J.: Prentice Hall, 1965), 184.
6. Quoted in Robert Goldwater and Marco Treves, eds., *Artists on Art, from the XIV to the XX Century* (New York: Pantheon, 1945), 322.
7. Ibid., 375.
8. Vincent van Gogh to Theo van Gogh, September 1888, in J. van Gogh–Bonger and V. W. van Gogh, eds., *The Complete Letters of Vincent van Gogh* (Greenwich, Conn.: New York Graphic Society, 1979), 3: 534.

GLOSSARY

Note: *Text page references are in parentheses. References to bonus image online essays are in blue.*

a secco—Italian, "dried." See *fresco.* (603)

abacus—The uppermost portion of the *capital* of a *column,* usually a thin slab. (116)

abbess—See *abbey.* (322)

abbey—A religious community under the direction of an abbot (for monks) or an abbess (for nuns). (322)

abbot—See *abbey.* (322)

abhaya—See *mudra.* (427, 984)

abrasion—The rubbing or grinding of stone or another material to produce a smooth finish. (64)

abstract—Non-representational; forms and colors arranged without reference to the depiction of an object. (5)

Abstract Expressionism—The first major American avant-garde movement, Abstract Expressionism emerged in New York City in the 1940s. The artists produced *abstract* paintings that expressed their state of mind and that they hoped would strike emotional chords in viewers. The movement developed along two lines: *gestural abstraction* and *chromatic abstraction.* (902, 1046)

acropolis—Greek, "high city." In ancient Greece, usually the site of the city's most important temple(s). (117)

action painting—Also called *gestural abstraction.* The kind of *Abstract Expressionism* practiced by Jackson Pollock, in which the emphasis was on the creation process, the artist's gesture in making art. Pollock poured liquid paint in linear webs on his canvases, which he laid out on the floor, thereby physically surrounding himself in the painting during its creation. (905, 1019)

additive light—Natural light, or sunlight, the sum of all the wavelengths of the visible *spectrum.* See also *subtractive light.* (7)

additive sculpture—A kind of sculpture *technique* in which materials (for example, clay) are built up or "added" to create form. (11)

adobe—The clay used to make a kind of sun-dried mud brick of the same name; a building made of such brick. (508, 529)

aerial perspective—See *perspective.* (567)

agora—An open square or space used for public meetings or business in ancient Greek cities. (138)

ahu—A stone platform on which the *moai* of Easter Island stand. Ahu marked burial sites or served ceremonial purposes. (1052)

'ahu 'ula—A Hawaiian feather cloak. (1058)

airbrush—A tool that uses compressed air to spray paint onto a surface. (918)

aisle—The portion of a *basilica* flanking the *nave* and separated from it by a row of *columns* or *piers.* (12, 189, 243)

akua'ba—"Akua's child." A Ghanaian image of a young girl. (1071)

ala (pl. **alae**)—One of a pair of rectangular recesses at the back of the *atrium* of a Roman house. (190)

album leaf—A painting on a single sheet of paper for a collection stored in an album. (459, 999)

alchemy—The study of seemingly magical changes, especially chemical changes. (645)

altar frontal—A decorative panel on the front of a church altar. (367)

altarpiece—A panel, painted or sculpted, situated above and behind an altar. See also *retable.* (392, 404)

alternate-support system—In church architecture, the use of alternating wall supports in the *nave,* usually *piers* and *columns* or *compound piers* of alternating form. (324)

amalaka—In Hindu temple design, the large flat disk with ribbed edges surmounting the beehive-shaped tower (*shikara*). (439)

Amazonomachy—In Greek mythology, the battle between the Greeks and Amazons. (136)

ambo—A church *pulpit* for biblical readings. (392)

ambulatory—A covered walkway, outdoors (as in a church *cloister*) or indoors; especially the passageway around the *apse* and the *choir* of a church. In Buddhist architecture, the passageway leading around the *stupa* in a *chaitya hall.* (244, 430)

amphiprostyle—A *classical* temple *plan* in which the *columns* are placed across both the front and back but not along the sides. (115)

amphitheater—Greek, "double theater." A Roman building type resembling two Greek theaters put together. The Roman amphitheater featured a continuous elliptical *cavea* around a central *arena.* (189, 401)

amphora—An ancient Greek two-handled jar used for general storage purposes, usually to hold wine or oil. (110)

amulet—An object worn to ward off evil or to aid the wearer. (61)

Analytic Cubism—The first phase of *Cubism,* developed jointly by Pablo Picasso and Georges Braque, in which the artists analyzed form from every possible vantage point to combine the various views into one pictorial whole. (847)

anamorphic image—A distorted image that must be viewed by some special means (such as a mirror) to be recognized. (656)

ancien régime—French, "old order." The term used to describe the political, social, and religious order in France before the Revolution at the end of the 18th century. (736)

antae—The molded projecting ends of the walls forming the *pronaos* or *opisthodomos* of an ancient Greek temple. (115)

ante legem—Latin, "before the law." In Christian thought, the period before Moses received the Ten Commandments. See also *sub lege.* (392)

apadana—The great audience hall in ancient Persian palaces. (51)

apostle—Greek, "messenger." One of the 12 disciples of Jesus. (240)

apotheosis—Elevated to the rank of gods, or the ascent to heaven. (206, 18-10A)

apotropaic—Capable of warding off evil. (118)

apoxyomenos—Greek, "athlete scraping oil from his body." (147)

apse—A recess, usually semicircular, in the wall of a building, commonly found at the east end of a church. (28, 134, 208, 243, 413, 1031)

apsidal—Rounded; *apse*-shaped. (429)

arcade—A series of *arches* supported by *piers* or *columns.* (52, 243, 287, 290, 413, 20-4A)

Arcadian (adj.)—In Renaissance and later art, depictions of an idyllic place of rural peace and simplicity. Derived from Arcadia, an ancient district of the central Peloponnesos in southern Greece. (625)

arch—A curved structural member that spans an opening and is generally composed of wedge-shaped blocks (*voussoirs*) that transmit the downward pressure laterally. See also *thrust.* (48, 12-10A)

Archaic—The artistic style of 600–480 BCE in Greece, characterized in part by the use of the *composite view* for painted and *relief* figures and of Egyptian stances for statues. (111)

Archaic smile—The smile that appears on all *Archaic* Greek statues from about 570 to 480 BCE. The smile is the Archaic sculptor's way of indicating that the person portrayed is alive. (112)

architrave—The *lintel* or lowest division of the *entablature;* also called the epistyle. (116, 640)

archivolt—The continuous molding framing an *arch.* In *Romanesque* and *Gothic* architecture, one of the series of concentric bands framing the *tympanum.* (344)

arcuated—*Arch*-shaped. (48, 175, 206)

arena—In a Roman *amphitheater,* the central area where bloody *gladiatorial* combats and other boisterous events took place. (189)

armature—The crossed, or diagonal, *arches* that form the skeletal framework of a *Gothic rib vault.* In sculpture, the framework for a clay form. (11, 368)

arriccio—In *fresco* painting, the first layer of rough lime plaster applied to the wall. (408)

Art Deco—Descended from *Art Nouveau,* this movement of the 1920s and 1930s sought to upgrade industrial design as a "fine art" and to work new materials into decorative patterns that could be either machined or handcrafted. Characterized by streamlined, elongated, and symmetrical design. (871)

Art Nouveau—French, "new art." A late-19th- and early-20th-century art movement whose proponents tried to synthesize all the arts in an effort to create art based on natural forms that could be mass produced by technologies of the industrial age. The movement had other names in other countries: Jugendstil in Austria and Germany, Modernismo in Spain, and Floreale in Italy. (828)

asceticism—Self-discipline and self-denial. (427)

ashlar masonry—Carefully cut and regularly shaped blocks of stone used in construction, fitted together without mortar. (62, 1031)

assemblage—An artwork constructed from already existing objects. (914)

asye usu—Baule (Côte d'Ivoire) bush spirits. (1069)

atlantid—A male figure that functions as a supporting *column.* See also *caryatid.* (72, 506)

atlatl—Spear-thrower, the typical weapon of the Toltecs of ancient Mexico. (506)

atmospheric perspective—See *perspective.* (194, 567)

atrium—The central reception room of a Roman house that is partly open to the sky. Also the open, *colonnaded* court in front of and attached to a Christian *basilica.* (190, 243, 672)

attic—The uppermost story of a building, *triumphal arch,* or city gate. (201)

attribute—(n.) The distinctive identifying aspect of a person, for example, an object held, an associated animal, or a mark on the body. (v.) To make an *attribution.* (5)

attribution—Assignment of a work to a maker or makers. (6)

augur—A Roman priest who determined the will of the gods from the flight of birds and whose attribute is the *lituus.* (165)

automatism—In painting, the process of yielding oneself to instinctive motions of the hands after establishing a set of conditions (such as size of paper or medium) within which a work is to be created. (875)

avant-garde—French, "advance guard" (in a platoon). Late-19th- and 20th-century artists who emphasized innovation and challenged established convention in their work. Also used as an adjective. (836)

avatar—A manifestation of a deity incarnated in some visible form in which the deity performs a sacred function on earth. In Hinduism, an incarnation of a god. (435, 981)

axial plan—See *plan.* (72)

axis mundi—Latin, "axis of the universe." In South Asia, a tall pillar planted deep in the ground, connecting earth and sky. (15-6A)

backstrap loom—A simple Andean loom featuring a belt or backstrap encircling the waist of the seated weaver. (510)

bai—An elaborately painted men's ceremonial house on Belau (formerly Palau) in the Caroline Islands of Micronesia. (1050)

baldacchino—A canopy on *columns,* frequently built over an altar. The term derives from *baldacco.* (243, 673)

baldacco—Italian, "silk from Baghdad." See *baldacchino.* (673)

baldric—A sashlike belt worn over one shoulder and across the chest to support a sword. (24-28B)

baptism—The Christian bathing ceremony in which an infant or a convert becomes a member of the Christian community. (236)

baptistery—In Christian architecture, the building used for *baptism,* usually situated next to a church. Also, the designated area or hall within a church for baptismal rites. (236)

bar tracery—See *tracery.* (375)

baray—One of the large reservoirs laid out around Cambodian *wats* that served as means of transportation as well as irrigation. A network of canals connected the reservoirs. (444)

barge boards—The angled boards that outline the exterior gables of a Maori meetinghouse. (1043)

Baroque—The traditional blanket designation for European art from 1600 to 1750. The stylistic term *Baroque,* which describes art that features dramatic theatricality and elaborate ornamentation in contrast to the simplicity and orderly rationality of *Renaissance* art, is most appropriately applied to Italian art of this period. The term derives from *barroco.* (670)

barrel vault—See *vault.* (184, 338, 585, 981)

barroco—Portuguese, "irregularly shaped pearl." See *Baroque.* (670)

base—In ancient Greek architecture, the molded projecting lowest part of *Ionic* and *Corinthian columns.* (*Doric* columns do not have bases.) (51, 116)

basilica (adj. **basilican**)—In Roman architecture, a public building for legal and other civic proceedings, rectangular in plan with an entrance usually on a long side. In Christian architecture, a church somewhat resembling the Roman basilica, usually entered from one end and with an *apse* at the other. (189, 413, 583)

bas-relief—See *relief.* (12, 820)

batik—An Indonesian fabric-dyeing technique using melted wax to form patterns the dye cannot penetrate. (31-22B)

battlement—A low parapet at the top of a circuit wall in a fortification. (382, 416)

Bauhaus—A *school* of architecture in Germany in the 1920s under the aegis of Walter Gropius, who emphasized the unity of art, architecture, and design. (884)

bay—The space between two columns, or one unit in the *nave arcade* of a church; also, the passageway in an *arcuated* gate. (411, 413, 457)

beam—A horizontal structural member that carries the load of the superstructure of a building; a timber *lintel.* (457)

Beaux-Arts—An architectural *style* of the late 19th and early 20th centuries in France. Based on ideas taught at the École des Beaux-Arts in Paris, the Beaux-Arts style incorporated *classical* principles, such as symmetry in design, and included extensive exterior ornamentation. (789)

begging bowl—The bowl Buddhist monks use to collect alms, either money or food. (486)

belvedere—Italian, "beautiful view." A building or other structure with a view of a *landscape* or seascape. (623)

ben-ben—A pyramidal stone; an emblem of the Egyptian god Re. (57, 61)

benday dots—Named after the newspaper printer Benjamin Day, the benday dot system involves the modulation of *colors* through the placement and size of colored dots. (916)

benedictional—A Christian religious book containing bishops' blessings. (312)

bent-axis plan—A *plan* that incorporates two or more angular changes of direction, characteristic of Sumerian architecture. (33)

bestiary—A collection of illustrations of real and imaginary animals. (343)

bhakti—In Buddhist thought, the adoration of a personalized deity (*bodhisattva*) as a means of achieving unity with it; love felt by the devotee for the deity. In Hinduism, the devout, selfless direction of all tasks and activities of life to the service of one god. (981)

Bharat Mata—Mother India; the female personification of India. (32-10A)

bhumisparsha—See *mudra.* (427)

bi—In ancient China, jade disks carved as ritual objects for burial with the dead. They were often decorated with piercings that extended entirely through the object, as well as with surface carvings. (453, 454)

bichrome—Two-color. (511)

bieri—The wooden *reliquary* guardian figures of the Fang in Gabon and Cameroon. (1064)

bilateral symmetry—Having the same *forms* on either side of a central axis. (64)

bilingual vases—Experimental Greek vases produced for a short time in the late sixth

century BCE; one side featured *black-figure* decoration, the other *red-figure*. (121)

Biomorphic Surrealism—See *Surrealism*. (875)

bisj pole—An elaborately carved pole constructed from the trunk of the mangrove tree. The Asmat people of southwestern New Guinea created bisj poles to indicate their intent to avenge a relative's death. (1046)

black-figure painting—In early Greek pottery, the silhouetting of dark figures against a light background of natural, reddish clay, with linear details *incised* through the silhouettes. (111)

blind arcade—An *arcade* having no true openings, applied as decoration to a wall surface. (52, 290)

block statue—In ancient Egyptian sculpture, a cubic stone image with simplified body parts. (74)

bocio—A Fon (Republic of Benin) empowerment figure. (1066)

bodhisattva—In Buddhist thought, a potential Buddha who chooses not to achieve enlightenment in order to help save humanity. (427)

Book of Hours—A Christian religious book for private devotion containing prayers to be read at specified times of the day. (312)

boshan—A Chinese incense burner. (455, 16-6A)

boss—A circular knob. (426)

bottega—An artist's studio-shop. (569)

braccia—Italian, "arm." A unit of measurement; 1 braccia equals 23 inches. (582)

breakfast piece—A *still life* that includes bread and fruit. (701)

breviary—A Christian religious book of selected daily prayers and Psalms. (312, 386, 550)

bucranium (pl. bucrania)—Latin, "bovine skull." A common motif in classical architectural ornament. (659, 1-16A)

Buddha triad—A three-figure group with a central Buddha flanked on each side by a *bodhisattva*. (475)

buon fresco—See *fresco*. (408, 603)

burgher—A middle-class citizen. (28-32A)

burin—A pointed tool used for *engraving* or *incising*. (556)

bust—A freestanding sculpture of the head, shoulders, and chest of a person. (12)

buttress—An exterior masonry structure that opposes the lateral *thrust* of an *arch* or a *vault*. A pier buttress is a solid mass of masonry. A flying buttress consists typically of an inclined member carried on an arch or a series of arches and a solid buttress to which it transmits lateral thrust. (184)

byobu—Japanese painted folding screens. (1010)

Byzantine—The art, territory, history, and culture of the Eastern Christian Empire and its capital of Constantinople (ancient Byzantium). (256)

caduceus—In ancient Greek mythology, a magical rod entwined with serpents, the attribute of Hermes (Roman, Mercury), the messenger of the gods. (107, 559)

caldarium—The hot-bath section of a Roman bathing establishment. (220)

caliph(s)—Islamic rulers, regarded as successors of Muhammad. (285)

calligrapher—One who practices *calligraphy*. (294, 466, 997)

calligraphy—Greek, "beautiful writing." Handwriting or penmanship, especially elegant writing as a decorative art. (294, 466, 997)

calotype—From the Greek *kalos*, "beautiful." A photographic process in which a positive image is made by shining light through a negative image onto a sheet of sensitized paper. (791, 792)

came—A lead strip in a *stained-glass* window that joins separate pieces of colored glass. (375)

camera lucida—Latin, "lighted room." A device in which a small lens projects the image of an object downward onto a sheet of paper. (791)

camera obscura—Latin, "dark room." An ancestor of the modern camera in which a tiny pinhole, acting as a lens, projects an image on a screen, the wall of a room, or the ground-glass wall of a box; used by artists in the 17th, 18th, and early 19th centuries as an aid in drawing from nature. (711)

campanile—A bell tower of a church, usually, but not always, freestanding. (350, 416)

canon—A rule, for example, of proportion. The ancient Greeks considered beauty to be a matter of "correct" proportion and sought a canon of proportion, for the human figure and for buildings. The fifth-century BCE sculptor Polykleitos wrote the *Canon*, a treatise incorporating his formula for the perfectly proportioned statue. (10, 66)

canon table—A concordance, or matching, of the corresponding passages of the four *Gospels* as compiled by Eusebius of Caesarea in the fourth century. (312)

canonized—Declared a saint by the Catholic Church. (354, 14-5A)

canopic jar—In ancient Egypt, the container in which the organs of the deceased were placed for later burial with the mummy. (61)

capital—The uppermost member of a *column*, serving as a transition from the *shaft* to the *lintel*. In *classical* architecture, the form of the capital varies with the *order*. (51, 60, 116, 402, 429)

Capitolium—An ancient Roman temple dedicated to the gods Jupiter, Juno, and Minerva. (189)

capriccio—Italian, "originality." One of several terms used in Italian *Renaissance* literature to praise the originality and talent of artists. (604)

caput mundi—Latin, "head (capital) of the world." (180)

cardo—The north-south street in a Roman town, intersecting the *decumanus* at right angles. (189)

Caroline minuscule—The alphabet that *Carolingian* scribes perfected, from which the modern English alphabet was developed. (317)

Carolingian (adj.)—Pertaining to the empire of Charlemagne (Latin, "Carolus Magnus") and his successors. (317)

carpet page—In early medieval manuscripts, a decorative page resembling a textile. (311)

cartography—The art of mapmaking. (13-38B)

cartoon—In painting, a full-size preliminary drawing from which a painting is made. (408, 602)

carving—A *technique* of sculpture in which the artist cuts away material (for example, from a stone block) in order to create a *statue* or a *relief*. (11)

caryatid—A female figure that functions as a supporting *column*. See also *atlantid*. (72, 117)

cassone (pl. cassoni)—A carved chest, often painted or gilded, popular in *Renaissance* Italy for the storing of household clothing. (631)

castellum—See *westwork*. (323)

casting—A sculptural *technique* in which the artist pours liquid metal, plaster, clay, or another material into a *mold*. When the material dries, the sculptor removes the cast piece from the mold. (11)

castrum—A Roman military encampment. (207)

catacombs—Subterranean networks of rock-cut galleries and chambers designed as cemeteries for the burial of the dead. (237)

cathedra—Latin, "seat." See *cathedral*. (350)

cathedral—A bishop's church. The word derives from *cathedra*, referring to the bishop's chair. (350, 412)

cavea—Latin, "hollow place or cavity." The seating area in ancient Greek and Roman theaters and *amphitheaters*. (151, 189)

celadon—A Chinese-Korean pottery *glaze*, fired in an oxygen-deprived kiln to a characteristic gray-green or pale blue color. (472)

cella—The chamber at the center of an ancient temple; in a *classical* temple, the room (Greek, *naos*) in which the *cult statue* usually stood. (33, 115, 618)

celt—In Olmec Mexico, an ax-shaped form made of polished jade; generally, a prehistoric metal or stone implement shaped like a chisel or ax head. (494)

cemen—The winglike openwork projection at the top of an Asmat *bisj pole*. (1046)

centaur—In ancient Greek mythology, a creature with the front or top half of a human and the back or bottom half of a horse. (105)

centauromachy—In ancient Greek mythology, the battle between the Greeks and *centaurs*. (120)

central plan—See *plan*. (244, 288, 583)

cestrum—A small spatula used in *encaustic* painting. (218)

chacmool—A *Mesoamerican* statuary type depicting a fallen warrior on his back with a receptacle on his chest for sacrificial offerings. (491, 883)

chaitya hall—A South Asian rock-cut temple hall having a votive *stupa* at one end. (429)

chakra—The Buddha's wheel, set in motion at Sarnath. (423, 429)

chakravartin—In South Asia, the ideal king, the Universal Lord who ruled through goodness. (429, 985)

Chan—See *Zen*. (470, 1007)

chancel arch—The arch separating the chancel (the *apse* or *choir*) or the *transept* from the *nave* of a basilica or church. (228, 243, 413)

chantry—An endowed chapel for the chanting of the mass for the founder of the chapel. (13-42A)

chaplet—A metal pin used in hollow-casting to connect the *investment* with the clay core. (130)

chapter house—The meeting hall in a *monastery.* (585)

characters—In Chinese writing, signs that record spoken words. (450, 997)

chartreuse—A Carthusian *monastery.* (537)

charun—An Etruscan death demon. (176)

chasing—The engraving or embossing of metal. (673)

chasseur—French cavalry officer. (27-13A)

château (pl. **châteaux**)—French, "castle." A luxurious country residence for French royalty, developed from medieval castles. (657)

chatra—See *yasti.* (430)

cherub—A chubby winged child angel. (552)

chiaroscuro—In drawing or painting, the treatment and use of light and dark, especially the gradations of light that produce the effect of *modeling.* (409)

chiaroscuro woodcut—A *woodcut* technique using two blocks of wood instead of one. The printmaker carves and inks one block in the usual way in order to produce a traditional black-and-white print. Then the artist cuts a second block consisting of broad highlights that can be inked in gray or color and printed over the first block's impression. (649)

chigi—Decorative extensions of the *rafters* at each end of the roof of a Japanese shrine. (480)

chimera—A monster of Greek invention with the head and body of a lion and the tail of a serpent. A second head, that of a goat, grows out of one side of the body. (174)

chisel—A tool with a straight blade at one end for cutting and shaping stone or wood. (18)

chiton—A Greek tunic, the essential (and often only) garment of both men and women, the other being the *himation,* or mantle. (115)

choir—The space reserved for the clergy and singers in the church, usually east of the *transept* but, in some instances, extending into the *nave.* (12, 264)

Christ—Savior. (240)

Christogram—The three initial letters (chi-rho-iota, or ☧) of Christ's name in Greek, which came to serve as a monogram for Christ. (230, 264, 307)

chromatic abstraction—A kind of *Abstract Expressionism* that focuses on the emotional resonance of color, as exemplified by the work of Barnett Newman and Mark Rothko. (903)

chronology—In art history, the dating of art objects and buildings. (2)

chryselephantine—Fashioned of gold and ivory. (94)

Cinquecento—Italian, "500," that is, the 1500s or 16th century. (599)

circumambulation—In Buddhist worship, walking around the *stupa* in a clockwise direction, a process intended to bring the worshiper into harmony with the cosmos. (430)

cire perdue—See *lost-wax process.* (130, 507, 673, 983)

cista (pl. **cistae**)—An Etruscan cylindrical container made of sheet bronze with cast handles and feet, often with elaborately engraved bodies, used for women's toiletry articles. (175)

city-state—An independent, self-governing city. (31, 406)

Classical—The art and culture of ancient Greece between 480 and 323 BCE. Lowercase *classical* refers more generally to Greco-Roman art and culture. (402)

clerestory—The *fenestrated* part of a building that rises above the roofs of the other parts. The oldest known clerestories are Egyptian. In Roman *basilicas* and medieval churches, clerestories are the windows that form the *nave*'s uppermost level below the timber ceiling or the *vaults.* (73, 184, 243, 373, 413, 20-4A)

cloison—French, "partition." A cell made of metal wire or a narrow metal strip soldered edge-up to a metal base to hold *enamel,* semiprecious stones, pieces of colored glass, or glass paste fired to resemble sparkling jewels. (310)

cloisonné—A decorative metalwork technique employing *cloisons;* also, decorative brickwork in later Byzantine architecture. (271, 310, 817)

cloister—A *monastery* courtyard, usually with covered walks or *ambulatories* along its sides. (322, 341, 576)

cluster pier—See *compound pier.* (340, 373, 12-4A, 14-12A)

codex (pl. **codices**)—Separate pages of *vellum* or *parchment* bound together at one side; the predecessor of the modern book. The codex superseded the *rotulus.* In *Mesoamerica,* a painted and inscribed book on long sheets of bark paper or deerskin coated with fine white plaster and folded into accordion-like pleats. (249, 1023)

coffer—A sunken panel, often ornamental, in a *vault* or a ceiling. (210)

collage—A composition made by combining on a flat surface various materials, such as newspaper, wallpaper, printed text and illustrations, photographs, and cloth. (8, 835, 850)

colonnade—A series or row of *columns,* usually spanned by *lintels.* (70)

colonnette—A thin *column.* (194, 290)

colophon—An inscription, usually on the last page, giving information about a book's manufacture. In Chinese painting, written texts on attached pieces of paper or silk. (312, 997)

color—The value, or tonality, of a color is the degree of its lightness or darkness. The intensity, or saturation, of a color is its purity, its brightness or dullness. See also *primary colors, secondary colors,* and *complementary colors.* (7, 813)

color-field painting—A variant of *Post-Painterly Abstraction* in which artists sought to reduce painting to its physical essence by pouring diluted paint onto unprimed canvas and letting these pigments soak into the fabric, as exemplified by the work of Helen Frankenthaler and Morris Louis. (908)

colorito—Italian, "colored" or "painted." A term used to describe the application of paint. Characteristic of the work of 16th-century Venetian artists who emphasized the application of paint as an important element of the creative process. Central Italian artists, in contrast, largely emphasized *disegno*—the careful design preparation based on preliminary drawing. (625)

colossal order—An architectural design in which the *columns* or *pilasters* are two or more stories tall. Also called a giant order. (594)

column—A vertical, weight-carrying architectural member, circular in cross-*section* and consisting of a *base* (sometimes omitted), a *shaft,* and a *capital.* (10, 51, 402)

combines—The name American artist Robert Rauschenberg gave to his *assemblages* of painted passages and sculptural elements. (914)

commedia dell'arte—A traditional Italian comic play performed by actors and musicians. (29-19A)

complementary colors—Those pairs of *colors,* such as red and green, that together embrace the entire *spectrum.* The complement of one of the three *primary colors* is a mixture of the other two. (7, 813)

compline—The last prayer of the day in a *Book of Hours.* (550)

compose—See *composition.* (7, 21, 38)

Composite capital—A capital combining *Ionic* volutes and *Corinthian* acanthus leaves, first used by the ancient Romans. (206, 587, 21-36A)

composite view—A convention of representation in which part of a figure is shown in profile and another part of the same figure is shown frontally; also called twisted perspective. (23, 523)

composition—The way in which an artist organizes *forms* in an artwork, either by placing shapes on a flat surface or arranging forms in space. (7, 21, 38)

compound pier—A *pier* with a group, or cluster, of attached *shafts,* or *responds,* especially characteristic of *Gothic* architecture. (340, 373, 12-4A, 14-12A)

Conceptual Art—An American *avant-garde* art movement of the 1960s whose premise was that the "artfulness" of art lay in the artist's idea rather than its final expression. (936)

conceptual representation—The representation of the fundamental distinguishing properties of a person or object, not the way a figure or object appears in space and light at a specific moment. See *composite view.* (35)

concrete—A building material invented by the Romans and consisting of various proportions of lime mortar, volcanic sand, water, and small stones. (184)

condottiere (pl. **condottieri**)—An Italian mercenary general. (560)

confraternity—In Late Antiquity, an association of Christian families pooling funds to purchase property for burial. In late medieval Europe, an organization founded by laypersons who dedicated themselves to strict religious observances. (237, 404)

congregational mosque—A city's main *mosque,* designed to accommodate the entire *Muslim*

population for the Friday noonday prayer. Also called the great mosque or Friday mosque. (288, 977)

connoisseur—An expert in *attributing* artworks to one artist rather than another. More generally, an expert on artistic *style*. (6)

Constructivism—An early-20th-century Russian art movement formulated by Naum Gabo, who built up his sculptures piece by piece in space instead of carving or *modeling* them. In this way the sculptor worked with "volume of mass" and "volume of space" as different materials. (860)

consuls—In the Roman Republic, the two chief magistrates. (181)

continuous narration—The depiction of the same figure more than once in the same space at different stages of a story. (7-44A)

contour line—In art, a continuous line defining the outer shape of an object. (7)

contrapposto—The disposition of the human figure in which one part is turned in opposition to another part (usually hips and legs one way, shoulders and chest another), creating a counterpositioning of the body about its central axis. Sometimes called "weight shift" because the weight of the body tends to be thrown to one foot, creating tension on one side and relaxation on the other. (129, 564)

corbel—A projecting wall member used as a support for some element in the superstructure. Also, *courses* of stone or brick in which each course projects beyond the one beneath it. Two such walls, meeting at the topmost course, create a corbeled *arch* or corbeled *vault*. (416, 640)

corbeled arch—An *arch* formed by the piling of stone blocks in horizontal *courses,* cantilevered inward until the blocks meet at a *keystone*. (99)

corbeled vault—A *vault* formed by the piling of stone blocks in horizontal *courses,* cantilevered inward until the two walls meet in an *arch*. (27, 99)

Corinthian capital—A more ornate form than *Doric* or *Ionic;* it consists of a double row of acanthus leaves from which tendrils and flowers grow, wrapped around a bell-shaped *echinus*. Although this *capital* form is often cited as the distinguishing feature of the Corinthian *order,* no such order exists, in strict terms, but only this type of capital used in the *Ionic* order. (151, 402, 587)

cornice—The projecting, crowning member of the *entablature* framing the *pediment;* also, any crowning projection. (116, 586)

corona civica—Latin, "civic crown." A Roman honorary wreath worn on the head. (7)

course—In masonry construction, a horizontal row of stone blocks. (28, 62, 1031)

covenant—In Judaism and Christianity, a binding agreement between God and humans. (561)

crenel—See *crenellation*. (382)

crenellation—Alternating solid merlons and open crenels in the notched tops of walls, as in *battlements*. (382)

crossing—The space in a *cruciform* church formed by the intersection of the *nave* and the *transept*. (246, 323, 14-18A)

cross-hatching—See *hatching*. (555)

cross vault—See *vault*. (184)

crossing square—The area in a church formed by the intersection (*crossing*) of a *nave* and a *transept* of equal width, often used as a standard *module* of interior proportion. (323, 583)

crossing tower—The tower over the *crossing* of a church. (246)

cruciform—Cross-shaped. (246, 583)

Crusades—In medieval Europe, armed pilgrimages aimed at recapturing the Holy Land from the *Muslims*. (346)

crypt—A *vaulted* space under part of a building, wholly or partly underground; in churches, normally the portion under an *apse*. (340)

cubiculum (pl. cubicula)—A small cubicle or bedroom that opened onto the *atrium* of a Roman house. Also, a chamber in an Early Christian *catacomb* that served as a mortuary chapel. (190, 237)

Cubism—An early-20th-century art movement that rejected *naturalistic* depictions, preferring *compositions* of shapes and *forms abstracted* from the conventionally perceived world. See also *Analytic Cubism* and *Synthetic Cubism*. (847)

cuerda seca—A type of polychrome tilework used in decorating Islamic buildings. (299)

cuirass—A military leather breastplate. (186)

cult statue—The *statue* of the deity that stood in the *cella* of an ancient temple. (115)

cuneiform—Latin, "wedge-shaped." A system of writing used in ancient Mesopotamia, in which wedge-shaped characters were produced by pressing a *stylus* into a soft clay tablet, which was then baked or otherwise allowed to harden. (33)

cuneus (pl. cunei)—In ancient Greek and Roman theaters and *amphitheaters,* the wedge-shaped section of stone benches separated by stairs. (151)

cupola—An exterior architectural feature composed of a *drum* with a shallow cap; a *dome*. (638, 9-32A)

cutaway—An architectural drawing that combines an exterior view with an interior view of part of a building. (12, 605)

Cycladic—The prehistoric art of the Aegean Islands around Delos, excluding Crete. (87)

Cyclopean masonry—A method of stone construction, named after the mythical *Cyclopes,* using massive, irregular blocks without mortar, characteristic of the Bronze Age fortifications of Tiryns and other *Mycenaean* sites. (97)

Cyclops (pl. Cyclopes)—A mythical Greek one-eyed giant. (97)

cylinder seal—A cylindrical piece of stone usually about an inch or so in height, decorated with an *incised* design, so that a raised pattern is left when the seal is rolled over soft clay. In the ancient Near East, documents, storage jars, and other important possessions were signed, sealed, and identified in this way. Stamp seals are an earlier, flat form of seal used for similar purposes. (39)

Dada—An early-20th-century art movement prompted by a revulsion against the horror of World War I. Dada embraced political anarchy, the irrational, and the intuitive. A disdain for convention, often enlivened by humor or whimsy, is characteristic of the art the Dadaists produced. (835, 856)

Daedalic—The Greek *Orientalizing* sculptural style of the seventh century BCE named after the legendary artist Daedalus. (111)

daguerreotype—A photograph made by an early method on a plate of chemically treated metal; developed by Louis J. M. Daguerre. (791, 792, 983)

daimyo—Local lords who controlled small regions and owed obeisance to the *shogun* in the Japanese *shogunate* system. (1006)

damnatio memoriae—The Roman decree condemning those who ran afoul of the Senate. Those who suffered damnatio memoriae had their memorials demolished and their names erased from public inscriptions. (206, 219)

darbar—The official audience of a *Mughal* emperor. (32-5A)

darshan—In Hindu worship, seeing images of the divinity and being seen by the divinity. (435)

De Stijl—Dutch, "the style." An early-20th-century art movement (and magazine), founded by Piet Mondrian and Theo van Doesburg, whose members promoted utopian ideals and developed a simplified geometric style. (880)

deconstruction—An analytical strategy developed in the late 20th century according to which all cultural "constructs" (art, architecture, literature) are "texts." People can read these texts in a variety of ways, but they cannot arrive at fixed or uniform meanings. Any interpretation can be valid, and readings differ from time to time, place to place, and person to person. For those employing this approach, deconstruction means destabilizing established meanings and interpretations while encouraging subjectivity and individual differences. (942)

Deconstructivism—An architectural *style* using *deconstruction* as an analytical strategy. Deconstructivist architects attempt to disorient the observer by disrupting the conventional categories of architecture. The haphazard presentation of *volumes, masses, planes,* lighting, and so forth challenges the viewer's assumptions about *form* as it relates to function. (962)

decumanus—The east-west street in a Roman town, intersecting the *cardo* at right angles. (189)

decursio—The ritual circling of a Roman funerary pyre. (215)

Deësis—Greek, "supplication." An image of Christ flanked by the figures of the Virgin Mary and John the Baptist, who intercede on behalf of humankind. (276)

demos—Greek, "the people," from which the word *democracy* is derived. (106)

demotic—Late Egyptian writing. (56)

denarius—The standard Roman silver coin from which the word *penny* ultimately derives. (187)

Der Blaue Reiter—German, "the blue rider." An early-20th-century *German Expressionist* art movement founded by Vassily Kandinsky and Franz Marc. The artists selected the whimsical name because of their mutual interest in the color blue and horses. (841)

dharma—In Buddhism, moral law based on the Buddha's teaching. (423, 15-8A)
dharmachakra—See *mudra.* (427)
dhyana—See *mudra.* (427)
di sotto in sù—Italian, "from below upward." A *perspective* view seen from below. (595, 637)
diagonal rib—See *rib.* (373)
diaphragm arch—A transverse, wall-bearing *arch* that divides a *vault* or a ceiling into compartments, providing a kind of firebreak. (12-27A)
dictator—In the Roman Republic, the supreme magistrate with extraordinary powers, appointed during a crisis for a specified period. Julius Caesar eventually became *dictator perpetuo,* dictator for life. (181, 187)
dictator perpetuo—See *dictator.* (181, 187)
Die Brücke—German, "the bridge." An early-20th-century *German Expressionist* art movement under the leadership of Ernst Ludwig Kirchner. The group thought of itself as the bridge between the old age and the new. (839)
Dilukai—A female figure with splayed legs, a common motif over the entrance to a Belau *bai,* serving as both guardian and fertility symbol. (1052)
dipteral—See *peristyle.* (115)
diptych—A two-paneled painting or *altarpiece;* also, an ancient Roman, Early Christian, or Byzantine hinged writing tablet, often of ivory and carved on the external sides. (251, 540)
disegno—Italian, "drawing" and "design." *Renaissance* artists considered drawing to be the external physical manifestation (*disegno esterno*) of an internal intellectual idea of design (*disegno interno*). (604, 625)
disputatio—Latin, "logical argument." The philosophical methodology used in *Scholasticism.* (372)
divine right—The belief in a king's absolute power as God's will. (714)
divisionism—See *pointillism.* (812)
documentary evidence—In art history, the examination of written sources in order to determine the date of an artwork, the circumstances of its creation, or the identity of the artist(s) who made it. (2)
doge—Duke; a ruler of the Republic of Venice, Italy. (274)
dome—A hemispherical *vault;* theoretically, an *arch* rotated on its vertical axis. In *Mycenaean* architecture, domes are beehive-shaped. (99, 184, 977, 14-18A)
domus—A Roman private house. (190)
donor portrait—A portrait of the individual(s) who commissioned (donated) a religious work, for example, an *altarpiece,* as evidence of devotion. (535)
Doric—One of the two systems (or *orders*) invented in ancient Greece for articulating the three units of the elevation of a *classical* building—the platform, the *colonnade,* and the superstructure (*entablature*). The Doric order is characterized by, among other features, *capitals* with funnel-shaped *echinuses, columns* without *bases,* and a *frieze* of *triglyphs* and *metopes.* See also *Ionic.* (116, 587, 640)
doryphoros—Greek, "spear bearer." (132)
dotaku—Ancient Japanese bronze ceremonial bells, usually featuring raised decoration. (477)
double monastery—A *monastery* for both monks and nuns. (352)
dressed masonry—Stone blocks shaped to the exact dimensions required, with smooth faces for a perfect fit. (62, 586)
dromos—The passage leading to a *tholos tomb.* (99)
drum—One of the stacked cylindrical stones that form the *shaft* of a *column.* Also, the cylindrical wall that supports a *dome.* (116, 184, 271)
dry painting—See *sand painting.* (1032)
drypoint—An *engraving* in which the design, instead of being cut into the plate with a *burin,* is scratched into the surface with a hard steel "pencil." See also *etching, intaglio.* (556)
duomo—Italian, "cathedral." (417)
earthenware—Pottery made of clay that is fired at low temperatures and is slightly porous. Also, clay figurines and statues produced in the same manner. (451)
earthworks—See *Environmental Art.* (932)
eaves—The lower part of a roof that overhangs the wall. (457)
echinus—The convex element of a *capital* directly below the *abacus.* (116)
écorché—The representation of a nude body as if without skin. (582)
edition—A set of impressions taken from a single print surface. (556)
effigy mounds—Ceremonial mounds built in the shape of animals or birds by native North American peoples. (517)
elevation—In architecture, a head-on view of an external or internal wall, showing its features and often other elements that would be visible beyond or before the wall. (12, 413)
emblema—The central framed figural panel of a *mosaic* floor. (149)
embroidery—The technique of sewing threads onto a finished ground to form contrasting designs. Stem stitching employs short overlapping strands of thread to form jagged lines. Laid-and-couched work creates solid blocks of color. (362, 449, 510)
emir—A Muslim ruler. (293)
empiricism—The search for knowledge based on observation and direct experience. (775)
enamel—A decorative coating, usually colored, fused onto the surface of metal, glass, or ceramics. (301, 992, 28-24A)
encaustic—A painting *technique* in which pigment is mixed with melted wax and applied to the surface while the mixture is hot. (111, 218, 914)
engaged column—A half-round *column* attached to a wall. See also *pilaster.* (60, 290, 340, 588)
engraving—The process of *incising* a design in hard material, often a metal plate (usually copper); also, the *print* or impression made from such a plate. (555, 556)
Enlightenment—The Western philosophy based on empirical evidence that dominated the 18th century. The Enlightenment was a new way of thinking critically about the world and about humankind, independently of religion, myth, or tradition. (727)
en plein air—See *plein air.* (798, 799, 801, 805, 806, 28-2A, 28-7A)
ensi—A Sumerian ruler. (36)
entablature—The part of a building above the *columns* and below the roof. The entablature has three parts: *architrave, frieze,* and *pediment.* (116)
entasis—The convex profile (an apparent swelling) in the *shaft* of a *column.* (118)
Environmental Art—An American art form that emerged in the 1960s. Often using the land itself as their material, Environmental artists construct monuments of great scale and minimal form. Permanent or impermanent, these works transform some section of the environment, calling attention both to the land itself and to the hand of the artist. Sometimes referred to as earthworks. (932)
eravo—A ceremonial men's meetinghouse constructed by the Elema people in New Guinea. (1048)
escutcheon—An emblem bearing a coat of arms. (628)
etching—A kind of *engraving* in which the design is *incised* in a layer of wax or varnish on a metal plate. The parts of the plate left exposed are then etched (slightly eaten away) by the acid in which the plate is immersed after incising. See also *drypoint, intaglio.* (556)
Eucharist—In Christianity, the partaking of the bread and wine, which believers hold to be either Christ himself or symbolic of him. (241, 538)
evangelist—One of the four authors (Matthew, Mark, Luke, John) of the New Testament *Gospels.* (314)
Events—See *Fluxus.* (935)
exedra—Recessed area, usually semicircular. (196, 929)
exemplum virtutis—Latin, "example or model of virtue." (746)
Expressionism (adj. **Expressionist**)—Twentieth-century art that is the result of the artist's unique inner or personal vision and that often has an emotional dimension. Expressionism contrasts with art focused on visually describing the empirical world. (839)
facade—Usually, the front of a building; also, the other sides when they are emphasized architecturally. (52, 412)
faience—A low-fired opaque glasslike silicate. (94)
fan vault—See *vault.* (391)
fantasia—Italian, "imagination." One of several terms used in Italian *Renaissance* literature to praise the originality and talent of artists. (604)
fasces—A bundle of rods with an ax attached, representing an emblem of authority in ancient Rome. (752)
fauces—Latin, "jaws." In a Roman house, the narrow foyer leading to the *atrium.* (190)
Fauves—French, "wild beasts." See *Fauvism.* (836)
Fauvism—An early-20th-century art movement led by Henri Matisse. For the Fauves, *color* became the formal element most responsible for pictorial coherence and the primary conveyor of meaning. (836)

Favrile—A type of leaded stained glass patented by Louis Comfort Tiffany in the late 19th century. (28-36B)

femmages—The name American artist Miriam Schapiro gave to her sewn *collages,* assembled from fabrics, quilts, buttons, sequins, lace trim, and rickrack collected at antique shows and fairs. (922)

femme fatale—French, "fatal woman." A destructive temptress of men. (820)

femme savante—French, "learned woman." The term used to describe the cultured hostesses of *Rococo* salons. (729)

fenestra coeli—Latin, "window to Heaven." (688)

fenestrated—Having windows. (184)

fenestration—The arrangement of the windows of a building. (184)

fête galante—French, "amorous festival." A type of *Rococo* painting depicting the outdoor amusements of French upper-class society. (732, 733)

feudalism—The medieval political, social, and economic system held together by the relationship between landholding *liege lords* and the *vassals* who were granted tenure of a portion of their land and in turn swore allegiance to the liege lord. (334, 536)

fibula (pl. **fibulae**)—A decorative pin, usually used to fasten garments. (167, 309)

fin-de-siècle—French, "end of the century." A period in Western cultural history from the end of the 19th century until just before World War I, when decadence and indulgence masked anxiety about an uncertain future. (823)

findspot—Place where an artifact was found; *provenance.* (18)

finial—A crowning ornament. (294, 541, 977)

First Style mural—The earliest style of Roman *mural* painting. Also called the Masonry style, because the aim of the artist was to imitate, using painted *stucco relief,* the appearance of costly marble panels. (191)

Flamboyant—A Late French *Gothic* style of architecture superseding the *Rayonnant* style and named for the flamelike appearance of its pointed bar *tracery.* (381)

flashing—In making *stained-glass* windows, fusing one layer of colored glass to another to produce a greater range of *colors.* (375)

fleur-de-lis—A three-petaled iris flower; the royal flower of France. (376, 388, 698)

Floreale—See *Art Nouveau.* (828)

florin—The denomination of gold coin of *Renaissance* Florence that became an international currency for trade. (417)

flute or **fluting**—Vertical channeling, roughly semicircular in cross-*section* and used principally on *columns* and *pilasters.* (51, 68, 116, 3-5A)

Fluxus—A group of American, European, and Japanese artists of the 1960s who created *Performance Art.* Their performances, or Events, often focused on single actions, such as turning a light on and off or watching falling snow, and were more theatrical than *Happenings.* (935)

flying buttress—See *buttress.* (12, 372, 373, 20-4A)

folio—A page of a manuscript or book. (248, 249)

fons vitae—Latin, "fountain of life." A symbolic fountain of everlasting life. (538)

foreshortening—The use of *perspective* to represent in art the apparent visual contraction of an object that extends back in space at an angle to the perpendicular plane of sight. (10, 44, 123, 401)

form—In art, an object's shape and structure, either in two dimensions (for example, a figure painted on a surface) or in three dimensions (such as a *statue*). (7)

formal analysis—The visual analysis of artistic *form.* (7)

formalism—Strict adherence to, or dependence on, stylized shapes and methods of *composition.* An emphasis on an artwork's visual elements rather than its subject. (902)

forum—The public square of an ancient Roman city. (189)

Fourth Style mural—In Roman *mural* painting, the Fourth Style marks a return to architectural *illusionism,* but the architectural vistas of the Fourth Style are irrational fantasies. (194)

freedmen, freedwomen—In ancient and medieval society, men and women who had been freed from servitude, as opposed to having been born free. (187)

freestanding sculpture—See *sculpture in the round.* (12, 18)

fresco—Painting on lime plaster, either dry (dry fresco, or fresco secco) or wet (true, or buon, fresco). In the latter method, the pigments are mixed with water and become chemically bound to the freshly laid lime plaster. Also, a painting executed in either method. (408, 409, 502)

fresco secco—See *fresco.* (74, 408, 603)

Friday mosque—See *congregational mosque.* (288)

frieze—The part of the *entablature* between the *architrave* and the *cornice;* also, any sculptured or painted band in a building. See *register.* (31, 116)

frigidarium—The cold-bath section of a Roman bathing establishment. (220)

furta sacra—Latin, "holy theft." (336)

fusuma—Japanese painted sliding-door panels. (1008)

Futurism—An early-20th-century Italian art movement that championed war as a cleansing agent and that celebrated the speed and dynamism of modern technology. (853)

garbha griha—Hindi, "womb chamber." In Hindu temples, the *cella,* the holy inner sanctum often housing the god's image or *symbol.* (439, 977)

genius—Latin, "spirit." In art, the personified spirit of a person or place. (22-52A)

genre—A *style* or category of art; also, a kind of painting that realistically depicts scenes from everyday life. (5, 551, 660)

Geometric—The *style* of Greek art during the ninth and eighth centuries BCE, characterized by *abstract* geometric ornament and schematic figures. (108)

German Expressionism—An early-20th-century regional Expressionist movement. (839)

gesso—Plaster mixed with a binding material, used as the base coat for paintings on wood panels. (545)

gestural abstraction—Also known as *action painting.* A kind of *abstract* painting in which the gesture, or act of painting, is seen as the subject of art. Its most renowned proponent was Jackson Pollock. See also *Abstract Expressionism.* (903)

giant order—See *colossal order.* (594)

gigantomachy—In ancient Greek mythology, the battle between gods and giants. (118, 22-54A)

giornata (pl. **giornate**)—Italian, "day." The section of plaster that a *fresco* painter expects to complete in one session. (408)

gladiator—An ancient Roman professional fighter, usually a slave, who competed in an *amphitheater.* (203)

glaze—A vitreous coating applied to pottery to seal and decorate the surface; it may be colored, transparent, or opaque, and glossy or *matte.* In *oil painting,* a thin, transparent, or semitransparent layer applied over a *color* to alter it slightly. (110, 451, 539, 583, 986, 992)

glazier—A glassworker. (375)

Gobelin tapestry—A *tapestry* produced on a vertical loom using a weaving *technique* in which no *weft* threads extend the full width of the fabric. (29-66B)

gold leaf—Gold beaten into tissue-paper-thin sheets that then can be applied to surfaces. (405)

gopis—South Asian herdswomen. (32-7A)

gopuras—The massive, ornamented entrance gateway towers of southern Indian temple compounds. (981)

gorget—A neck pendant, usually made of shell. (517)

gorgon—In ancient Greek mythology, a hideous female demon with snake hair. Medusa, the most famous gorgon, was capable of turning anyone who gazed at her into stone. (118)

Gospels—The four New Testament books that relate the life and teachings of Jesus. (312)

Gothic—Originally a derogatory term named after the Goths, used to describe the history, culture, and art of western Europe in the 12th to 14th centuries. Typically divided into periods designated Early (1140–1194), High (1194–1300), and Late (1300–1500). (365)

Gothic Revival—See *Neo-Gothic.* (788)

gouache—A painting *medium* consisting of watercolor mixed with gum. (843)

Grand Manner portraiture—A type of 18th-century portrait painting designed to communicate a person's grace and class through certain standardized conventions, such as the large scale of the figure relative to the canvas, the controlled pose, the *landscape* setting, and the low *horizon line.* (742)

granulation—A decorative technique in which tiny metal balls (granules) are fused to a metal surface. (167)

graver—An *engraving* tool. See also *burin.* (556)

great mosque—See *congregational mosque.* (288)

Greek cross—A cross with four arms of equal length. (271, 620, 676)

green architecture—Ecologically friendly architectural design using clean energy to sustain the natural environment. (961)

griffin—An eagle-headed winged lion. (51, 99, 4-9B, 10-5B)

grisaille—A *monochrome* painting done mainly in neutral grays to simulate sculpture. (409, 614, 13-36A, 20-8A)

groin—The edge formed by the intersection of two barrel *vaults.* (184)

groin vault—See *vault.* (184, 340, 350, 982, 14-12A)

ground line—In paintings and *reliefs,* a painted or carved baseline on which figures appear to stand. (20, 31)

guang—An ancient Chinese covered vessel, often in animal form, holding wine, water, grain, or meat for sacrificial rites. (452)

guild—An association of merchants, craftspersons, or scholars in medieval and *Renaissance* Europe. (366, 410)

haboku—In Japanese art, a loose and rapidly executed painting *style* in which the ink seems to have been applied by flinging or splashing it onto the paper. (1008)

Hadith—The words and exemplary deeds of the Prophet Muhammad. (285)

haiku—A 17-syllable Japanese poetic form. (1014)

halberd—A combination spear and battle-ax. (626)

hall church—See *Hallenkirche.* (348)

Hallenkirche—German, "hall church." A church design favored in Germany, but also used elsewhere, in which the *aisles* rise to the same height as the *nave.* (396)

handscroll—In Asian art, a horizontal painted scroll that is unrolled right to left, section by section, and often used to present illustrated religious texts or *landscapes.* (459, 991)

hanging scroll—In Asian art, a vertical scroll hung on a wall with pictures mounted or painted directly on it. (459, 991)

haniwa—Sculpted fired pottery cylinders, modeled in human, animal, or other forms and placed on Japanese *tumuli* of the Kofun period. (478)

Happenings—A term coined by American artist Allan Kaprow in the 1960s to describe loosely structured performances, whose creators were trying to suggest the aesthetic and dynamic qualities of everyday life; as actions, rather than objects, Happenings incorporate the fourth dimension (time). (934)

hard-edge painting—A variant of *Post-Painterly Abstraction* that rigidly excluded all reference to gesture and incorporated smooth knife-edge geometric forms to express the notion that painting should be reduced to its visual components. (907)

harmika—In Buddhist architecture, a stone fence or railing that encloses an area surmounting the *dome* of a *stupa* that represents one of the Buddhist heavens; from the center arises the *yasti.* (430)

harpies—Mythological creatures of the underworld. (22-8A)

haruspex (pl. haruspices)—An Etruscan priest who foretells events by studying animal livers. (6-13A)

hatching—A series of closely spaced drawn or *engraved* parallel lines. Cross-hatching employs sets of lines placed at right angles. (555)

head cluster—An abbreviated way of representing a crowd by painting or carving many heads close together, usually with too few bodies for the number of heads. (246)

heiau—A Hawaiian temple. (1057)

Helladic—The prehistoric art of the Greek mainland (*Hellas* in Greek). (87)

Hellas—The ancient name of Greece. (106)

Hellenes (adj. Hellenic)—The name the ancient Greeks called themselves as the people of *Hellas.* (106)

Hellenistic—The term given to the art and culture of the roughly three centuries between the death of Alexander the Great in 323 BCE and the death of Queen Cleopatra in 30 BCE, when Egypt became a Roman province. (153)

henge—An arrangement of *megalithic* stones in a circle, often surrounded by a ditch. (28)

heraldic composition—A *composition* that is symmetrical on either side of a central figure. (38)

herm—A bust on a quadrangular *pillar.* (133)

Hevehe—An elaborate cycle of ceremonial activities performed by the Elema people of the Papuan Gulf region of New Guinea. Also, the large, ornate masks produced for and presented during these ceremonies. (1047)

Hiberno-Saxon—An art *style* that flourished in the *monasteries* of the British Isles in the early Middle Ages. Also called Insular. (311)

hierarchy of scale—An artistic convention in which greater size indicates greater importance. (11, 31, 14-16A)

hieroglyphic—A system of writing using *symbols* or pictures. (55, 493)

high relief—See *relief.* (12, 65)

High-Tech—A contemporary architectural *style* calling for buildings that incorporate the latest innovations in engineering and technology and expose the structures' component parts. (961)

Hijra—The flight of Muhammad from Mecca to Medina in 622, the year from which Islam dates its beginnings. (285)

himation—An ancient Greek mantle worn by men and women over the *chiton* and draped in various ways. (115)

Hippodamian plan—A city *plan* devised by Hippodamos of Miletos ca. 466 BCE, in which a strict grid was imposed on a site, regardless of the terrain, so that all streets would meet at right angles. (154)

hiragana—A phonetic cursive script developed in Japan from Chinese *characters;* it came to be the primary script for Japanese court poetry. (484, 17-13B)

historiated—Ornamented with representations, such as plants, animals, or human figures, that have a narrative—as distinct from a purely decorative—function. (342)

hokkyo—Japanese, "bridge of the law." The third-highest rank among Buddhist monks. (34-9A)

hookah—A Moroccan water pipe. (27-17A)

horizon line—See *perspective.* (567)

hôtel—French, "town house." (728)

hubris—Greek, "arrogant pride." (143)

hue—The name of a *color.* See also *primary colors, secondary colors,* and *complementary colors.* (7, 813)

humanism—In the *Renaissance,* an emphasis on education and on expanding knowledge (especially of *classical* antiquity), the exploration of individual potential and a desire to excel, and a commitment to civic responsibility and moral duty. (407)

hydria—An ancient Greek three-handled water pitcher. (145)

hypaethral—A building having no *pediment* or roof, open to the sky. (154)

hypostyle hall—A hall with a roof supported by *columns.* (73, 288, 289)

icon—A portrait or image; especially in Byzantine churches, a panel with a painting of sacred personages that are objects of veneration. In the visual arts, a painting, a piece of sculpture, or even a building regarded as an object of veneration. (268, 269, 405)

iconoclasm—The destruction of religious or sacred images. In Byzantium, the period from 726 to 843 when there was an imperial ban on such images. The destroyers of images were known as iconoclasts. Those who opposed such a ban were known as iconophiles. (257, 269, 543, 652)

iconoclast—See *iconoclasm.* (257, 269, 543, 652)

iconography—Greek, the "writing of images." The term refers both to the content, or subject, of an artwork and to the study of content in art. It also includes the study of the symbolic, often religious, meaning of objects, persons, or events depicted in works of art. (5)

iconophile—See *iconoclasm.* (269)

iconostasis—Greek, "icon stand." In Byzantine churches, a screen or a partition, with doors and many tiers of *icons,* separating the sanctuary from the main body of the church. (279)

ikegobo—A Benin royal shrine. (520, 521)

illuminated manuscript—A luxurious handmade book with painted illustrations and decorations. (249, 405)

illusionism (adj. illusionistic)—The representation of the three-dimensional world on a two-dimensional surface in a manner that creates the illusion that the person, object, or place represented is three-dimensional. See also *perspective.* (8)

imagines—In ancient Rome, wax portraits of ancestors. (185, 196, 200)

imam—In Islam, the leader of collective worship. (288)

impasto—A layer of thickly applied pigment. (632, 902)

imperator—Latin, "commander in chief," from which the word *emperor* derives. (197)

impluvium—In a Roman house, the basin located in the *atrium* that collected rainwater. (190)

impost block—The uppermost block of a wall or *pier* beneath the *springing* of an *arch.* (21-31A)

Impressionism—A late-19th-century art movement that sought to capture a fleeting moment, thereby conveying the elusiveness and impermanence of images and conditions. (799)

in antis—In ancient Greek architecture, the area between the *antae.* (115)

incise—To cut into a surface with a sharp instrument; also, a method of decoration, especially on metal and pottery. (556)

incrustation—Wall decoration consisting of bright panels of different *colors.* (202, 355)

incubus—A demon believed in medieval times to prey, often sexually, on sleeping women. (762)

indulgence—A religious pardon for a sin committed. (374, 616, 652)

ingegno—Italian, "innate talent." One of several terms used in Italian *Renaissance* literature to praise the originality and talent of artists. (604)

installation—An artwork that creates an artistic environment in a room or gallery. (950, 30-25B)

insula (pl. **insulae**)—In Roman architecture, a multistory apartment house, usually made of brick-faced *concrete;* also refers to an entire city block. (213)

Insular—See *Hiberno-Saxon.* (311)

intaglio—A graphic technique in which the design is *incised,* or scratched, on a metal plate, either manually (*engraving, drypoint*) or chemically (*etching*). The incised lines of the design take the ink, making this the reverse of the *woodcut* technique. (556)

intensity—See *color.* (7)

interaxial or **intercolumniation**—The distance between the center of the lowest *drum* of a *column* and the center of the next. (135)

intercolumniation—See *interaxial.* (135)

internal evidence—In art history, the examination of what an artwork represents (people, clothing, hairstyles, and so on) in order to determine its date. Also, the examination of the *style* of an artwork to identify the artist who created it. (3)

International style—A *style* of 14th- and 15th-century painting begun by Simone Martini, who adapted the French *Gothic* manner to Sienese art fused with influences from northern Europe. This style appealed to the aristocracy because of its brilliant *color,* lavish costumes, intricate ornamentation, and themes involving splendid processions of knights and ladies. Also, a style of 20th-century architecture associated with Le Corbusier, whose elegance of design came to influence the look of modern office buildings and skyscrapers. (413, 886)

intonaco—In *fresco* painting, the last layer of smooth lime plaster applied to the wall; the painting layer. (408)

invenzione—Italian, "invention." One of several terms used in Italian *Renaissance* literature to praise the originality and talent of artists. (604)

investment—In hollow-casting, the final clay *mold* applied to the exterior of the wax model. (130)

Ionic—One of the two systems (or *orders*) invented in ancient Greece for articulating the three units of the elevation of a *classical* building: the platform, the *colonnade,* and the superstructure (*entablature*). The Ionic order is characterized by, among other features, *volutes, capitals, columns* with *bases,* and an uninterrupted *frieze.* (116, 587)

iron-wire lines—In ancient Chinese painting, thin brush lines suggesting tensile strength. (459, 482)

ivi p'o—Hollow, cylindrical bone or ivory ornaments produced in the Marquesas Islands (Polynesia). (1054)

iwan—In Islamic architecture, a *vaulted* rectangular recess opening onto a courtyard. (52, 288)

iy'oba—Benin queen mother. (532, 19-13A)

jambs—In architecture, the side posts of a doorway. (344)

Japonisme—The French fascination with all things Japanese. Japonisme emerged in the second half of the 19th century. (808)

jataka—Tales of the past lives of the Buddha. See also *sutra.* (430)

joined-wood technique—A Japanese sculptural *technique* in which a statue is assembled from multiple wood blocks, each hollowed out to make the pieces lighter. (17-13A)

jomon—Japanese, "cord markings." A type of Japanese ceramic technique characterized by ropelike markings. (476)

Jugendstil—See *Art Nouveau.* (828)

junzi—Chinese, "superior person" or "gentleman." A person who is a model of Confucian behavior. (463)

ka—In ancient Egypt, the immortal human life force. (57, 61)

Kaaba—Arabic, "cube." A small cubical building in Mecca, the Islamic world's symbolic center. (285)

kami—Shinto deities or spirits, believed in Japan to exist in nature (mountains, waterfalls) and in charismatic people. (479)

karesansui—Japanese dry-landscape gardening. (1006)

karma—In Vedic religions (see *Veda*), the ethical consequences of a person's life, which determine his or her fate. (427)

katsina—An art form of Native Americans of the Southwest, the katsina doll represents benevolent supernatural spirits (katsinas) living in mountains and water sources. (1033)

katsuogi—Wooden logs placed at right angles to the *ridgepole* of a Japanese shrine to hold the thatched roof in place. (480)

kautaha—Women's organizations in Tonga (Polynesia) that produce barkcloth. (1053)

keep—A fortified tower in a castle that served as a place of last refuge. (383)

kente—Brightly colored patterned cloth woven by Asante men on horizontal looms in long narrow strips sewn together to form *toga*-like robes. (1070, 1071, 37-13A)

keystone—See *voussoir.* (175, 344, 640)

khan—An Ottoman lord, or *sultan.* (10-23A)

khipu—Andean record-keeping device consisting of numerous knotted strings hanging from a main cord; the strings signified, by position and *color,* numbers and categories of things. (1030)

king's gallery—The band of *statues* running the full width of the *facade* of a *Gothic cathedral* directly above the *rose window.* (379, 380)

kiva—A square or circular underground structure that is the spiritual and ceremonial center of Pueblo Indian life. (518, 1032)

kline (pl. **klinai**)—A couch or funerary bed. A type of *sarcophagus* with a reclining portrait of the deceased on its lid. (217)

kodo—The lecture hall in a Japanese Buddhist temple complex. (475)

Kogan—The name of a distinctive type of *Shino* water jar. (1012)

kondo—Japanese, "golden hall." The main hall for worship in a Japanese Buddhist temple complex. The kondo contained *statues* of the Buddha and the *bodhisattvas* to whom the temple was dedicated. (475)

Koran—Islam's sacred book, composed of *surahs* (chapters) divided into verses. (285)

kore (pl. **korai**)—Greek, "young woman." An *Archaic* Greek *statue* of a young woman. (111)

koru—An unrolled spiral design used by the Maori of New Zealand in their *tattoos.* (1055)

kouros (pl. **kouroi**)—Greek, "young man." An *Archaic* Greek *statue* of a young man. (112)

krater—An ancient Greek wide-mouthed bowl for mixing wine and water. (102)

Kufic—An early form of Arabic script, characterized by angularity, with the uprights forming almost right angles with the baseline. (294)

kula—An exchange of white conus-shell arm ornaments and red chama-shell necklaces that takes place among the Trobriand Islanders of Papua New Guinea. (1049)

kupesi—Embroidered design tablets used by Tonga (Polynesia) women in the production of barkcloth. (1053)

kylix—An ancient Greek drinking cup with a wide bowl and two horizontal handles. (5-23A)

labrys—Minoan double-ax. (90)

labyrinth—Maze. The English word derives from the mazelike plan of the *Minoan* palace at Knossos. (90)

lacquer—A varnishlike substance made from the sap of the Asiatic sumac tree, used to decorate wood and other organic materials. Often colored with mineral pigments, lacquer cures to great hardness and has a lustrous surface. (453, 995)

laid-and-couched work—See *embroidery.* (362)

lakshana—One of the distinguishing marks of the Buddha. The lakshanas include the *urna* and *ushnisha.* (427)

lalitasana—In Buddhist iconography, the body pose with one leg folded and the other hanging down, indicating relaxation. (460)

lamassu—Assyrian guardian in the form of a man-headed winged bull. (46)

lancet—In *Gothic* architecture, a tall narrow window ending in a *pointed arch.* (370, 373, 890, 14-5A, 27-43A)

landscape—A picture showing natural scenery, without narrative content. (5, 27, 416)

Landschaft—German, "landscape." (662)

lateral section—See *section.* (12)

laudatio—Latin, "essay of praise." (570)

leading—In the manufacture of *stained-glass* windows, the joining of colored glass pieces using lead *cames.* (375)

lectionary—A book containing passages from the *Gospels,* arranged in the sequence that they are to be read during the celebration of religious services, including the *Mass,* throughout the year. (312)

lekythos (pl. **lekythoi**)—A flask containing perfumed oil; lekythoi were often placed in Greek graves as offerings to the deceased. (142)

libation—The pouring of liquid as part of a religious ritual. (36)

liege lord—In *feudalism,* a landowner who grants tenure of a portion of his land to a *vassal.* (334)

line—The extension of a point along a path, made concrete in art by drawing on or chiseling into a *plane.* (7)

linear perspective—See *perspective.* (192, 565, 567)

linga—In Hindu art, the depiction of Shiva as a phallus or cosmic *pillar.* (435)

linguist's staff—In Africa, a staff carried by a person authorized to speak for a king or chief. (1072)

lintel—A horizontal *beam* used to span an opening. (73, 99, 344)

literati—In China, talented amateur painters and scholars from the landed gentry. (956, 991, 31-22A, 33-1A)

lithograph—See *lithography.* (778)

lithography—A printmaking technique in which the artist uses an oil-based crayon to draw directly on a stone plate and then wipes water onto the stone. When ink is rolled onto the plate, it adheres only to the drawing. The *print* produced by this method is a lithograph. (778)

liturgy (adj. **liturgical**)—The official ritual of public worship. (242)

lituus—The curved staff carried by an *augur.* (165)

local color—An object's true *color* in white light. (801)

loculi—Openings in the walls of *catacombs* to receive the dead. (237)

loggia—A gallery with an open *arcade* or a *colonnade* on one or both sides. (576, 14-19A)

lohan—A Buddhist holy person who has achieved enlightenment and *nirvana* by suppression of all desire for earthly things. (468)

longitudinal plan—See *plan.* (243)

longitudinal section—See *section.* (12)

lost-wax (cire perdue) process—A bronze-*casting* method in which a figure is modeled in wax and covered with clay; the whole is fired, melting away the wax (French, *cire perdue*) and hardening the clay, which then becomes a *mold* for molten metal. (130, 507, 673, 983)

low relief—See *relief.* (12)

lunette—A semicircular area (with the flat side down) in a wall over a door, niche, or window; also, a painting or *relief* with a semicircular frame. (237, 344, 551, 7-54A)

lux nova—Latin, "new light." Abbot Suger's term for the light that enters a *Gothic* church through *stained-glass* windows. (369, 375)

machicolated gallery—A gallery in a defensive tower with holes in the floor to allow stones or hot liquids to be dumped on enemies below. (416)

madrasa—An Islamic theological college adjoining and often containing a *mosque.* (296)

maebyeong—A Korean vase similar to the Chinese *meiping.* (472)

magus (pl. **magi**)—One of the three wise men from the East who presented gifts to the infant Jesus. (240)

ma-hevehe—Mythical Oceanic water spirits. The Elema people of New Guinea believed these spirits visited their villages. (1047)

malanggan—Festivals held in honor of the deceased in New Ireland (Papua New Guinea). Also, the carvings and objects produced for these festivals. (1049)

mana—In Polynesia, spiritual power. (1052)

mandala—Sanskrit term for the sacred diagram of the universe; Japanese, mandara. (430, 439, 483)

mandapa—*Pillared* hall of a Hindu temple. (439)

mandara—See *mandala.* (430, 439, 483)

mandorla—An almond-shaped *nimbus* surrounding the figure of Christ or other sacred figure. In Buddhist Japan, a lotus-petal-shaped nimbus. (267, 460)

maniera—Italian, "style" or "manner." See *Mannerism.* (632, 682)

maniera greca—Italian, "Greek manner." The Italo-*Byzantine* painting *style* of the 13th century. (404, 14-7A)

Mannerism—A *style* of later *Renaissance* art that emphasized "artifice," often involving contrived imagery not derived directly from nature. Such artworks showed a self-conscious stylization involving complexity, caprice, fantasy, and polish. Mannerist architecture tended to flout the *classical* rules of order, stability, and symmetry, sometimes to the point of parody. (632)

manor—In *feudalism,* the estate of a *liege lord.* (334)

mantra—Sanskrit term for the ritual words or syllables recited in *Shingon* Buddhism. (483)

manulua—Triangular patterns based on the form of two birds, common in Tongan *tapa* designs. (1054)

maqsura—In some *mosques,* a screened area in front of the *mihrab* reserved for a ruler. (283, 288)

martyr—A person who chooses to die rather than deny his or her religious belief. See also *saint.* (237)

martyrium—A shrine to a Christian *martyr.* (274, 619)

Masonry Style—See *First Style mural.* (191)

mass—The bulk, density, and weight of matter in *space.* (8)

Mass—The Catholic and Orthodox ritual in which believers understand that Christ's redeeming sacrifice on the cross is repeated when the priest consecrates the bread and wine in the *Eucharist.* (241)

mastaba—Arabic, "bench." An ancient Egyptian rectangular brick or stone structure with sloping sides erected over a subterranean tomb chamber connected with the outside by a shaft. (58)

matins—In Christianity, early morning prayers. (550, 13-36A)

matte—In painting, pottery, and photography, a dull finish. (538)

maulstick—A stick used to steady the hand while painting. (661)

mausoleum—A monumental tomb. The name derives from the mid-fourth-century BCE tomb of Mausolos at Halikarnassos, one of the Seven Wonders of the ancient world. (225, 537, 980)

mbari—A ceremonial Igbo (Nigeria) house built about every 50 years in honor of the earth goddess Ala. (1070, 1077)

mbulu ngulu—The wood-and-metal *reliquary* guardian figures of the Kota of Gabon. (1064)

meander—An ornament, usually in bands but also covering broad surfaces, consisting of interlocking geometric motifs. An ornamental pattern of contiguous straight lines joined usually at right angles. (108)

medium (pl. **media**)—The material (for example, marble, bronze, clay, *fresco*) in which an artist works; also, in painting, the vehicle (usually liquid) that carries the pigment. (7)

megalith (adj. **megalithic**)—Greek, "great stone." A large, roughly hewn stone used in the construction of monumental prehistoric structures. (27)

megaron—The large reception hall and throne room in a *Mycenaean* palace, fronted by an open, two-*columned* porch. (97)

meiping—A Chinese vase of a high-shouldered shape; the *sgrafitto technique* was used in decorating such vases. (467, 472)

mela medica—Italian, "medicinal apples" (oranges). The emblem of the Medici family of *Renaissance* Florence. (580)

memento mori—Latin, "reminder of death." In painting, a reminder of human mortality, usually represented by a skull. (695, 26-7A, 30-25B)

mendicants—In medieval Europe, friars belonging to the Franciscan and Dominican orders, who renounced all worldly goods, lived by contributions of laypersons (the word *mendicant* means "beggar"), and devoted themselves to preaching, teaching, and doing good works. (385, 404)

menorah—In antiquity, the Jewish sacred seven-branched candelabrum. (207)

merlon—See *crenellation.* (382)

Mesoamerica—The region that comprises Mexico, Guatemala, Belize, Honduras, and the Pacific coast of El Salvador. (492, 1023)

Mesolithic—The "middle" Stone Age, between the *Paleolithic* and the *Neolithic* ages. (16)

Messiah—The savior of the Jews prophesied in Hebrew scripture. Christians believe that Jesus of Nazareth was the Messiah. (240)

metamatics—The name Swiss artist Jean Tinguely gave to the motor-driven devices he constructed to produce instant abstract paintings. (935)

metope—The square panel between the *triglyphs* in a *Doric frieze,* often sculpted in *relief.* (116)

mihrab—A semicircular niche set into the *qibla* wall of a *mosque.* (287, 288)

minaret—A distinctive feature of *mosque* architecture, a tower from which the faithful are called to worship. (134, 261, 287, 288, 977)

minbar—In a *mosque,* the *pulpit* on which the *imam* stands. (287, 288)

mingei—A type of modern Japanese folk pottery. (1019)

miniatures—Small individual Indian paintings intended to be held in the hand and viewed by one or two individuals at one time. (978, 979, 28-24A)

Minimalism—A predominantly sculptural American trend of the 1960s characterized by works featuring a severe reduction of *form,* often to single, homogeneous units. (910)

Minoan—The prehistoric art of Crete, named after the legendary King Minos of Knossos. (87)

Minotaur—The mythical beast, half man and half bull, that inhabited the *labyrinth* of the *Minoan* palace at Knossos. (86)

Miraj—The ascension of the Prophet Muhammad to Heaven. (286)

mithuna—In South Asian art, a male-female couple embracing or engaged in sexual intercourse. (431)

moai—Large, blocky figural stone sculptures found on Rapa Nui (Easter Island) in Polynesia. (1052)

mobile—A kind of sculpture, invented by Alexander Calder, combining nonobjective organic forms and motion in balanced structures hanging from rods, wires, and colored, organically shaped plates. (895)

modeling—The shaping or fashioning of three-dimensional forms in a soft material, such as clay; also, the gradations of light and shade reflected from the surfaces of matter in space, or the illusion of such gradations produced by alterations of value in a drawing, painting, or print. (113, 145, 146)

modernism—A movement in Western art that developed in the second half of the 19th century and sought to capture the images and sensibilities of the age. Modernist art goes beyond simply dealing with the present and involves the artist's critical examination of the premises of art itself. (801, 998)

Modernismo—See *Art Nouveau.* (828)

module (adj. **modular**)—A basic unit of which the dimensions of the major parts of a work are multiples. The principle is used in sculpture and other art forms, but it is most often employed in architecture, where the module may be the dimensions of an important part of a building, such as the diameter of a *column.* (10, 323, 457, 582)

moko—The form of tattooing practiced by the Maori of New Zealand. (1055)

moksha—See *nirvana.* (427, 435)

mold—A hollow form for *casting.* (11)

molding—In architecture, a continuous, narrow surface (projecting or recessed, plain or ornamented) designed to break up a surface, to accent, or to decorate. (82)

monastery—A group of buildings in which monks live together, set apart from the secular community of a town. (267, 537)

monastic—Relating to life in a *monastery.* (267, 404, 537)

monastic order—An organization of monks living according to the same rules, for example, the Benedictine, Franciscan, and Dominican orders. (404)

monochrome (adj. **monochromatic**)—One color. (194, 705)

monolith (adj. **monolithic**)—A stone *column shaft* that is all in one piece (not composed of *drums*); a large, single block or piece of stone used in *megalithic* structures. Also, a colossal statue carved from a single piece of stone. (116, 428)

monotheism—The worship of one all-powerful god. (233)

moralized Bible—A heavily illustrated Bible, each page pairing paintings of Old and New Testament episodes with explanations of their moral significance. (385)

mortise-and-tenon system—See *tenon.* (480)

mortuary temple—In Egyptian architecture, a temple erected for the worship of a deceased *pharaoh.* (62)

mosaic—Patterns or pictures made by embedding small pieces (*tesserae*) of stone or glass in cement on surfaces such as walls and floors; also, the *technique* of making such works. (245, 1024, 28-24A)

mosaic tilework—An Islamic decorative *technique* in which large ceramic panels are fired, cut into smaller pieces, and set in plaster. (299)

moschophoros—Greek, "calf bearer." (112)

mosque—The Islamic building for collective worship. From the Arabic word *masjid,* meaning a "place for bowing down." (261, 288)

Mozarabic—Referring to the Christian culture of northern Spain during the time Islamic *caliphs* ruled southern Spain. (316)

mudra—In Buddhist and Hindu iconography, a stylized and symbolic hand gesture. The dhyana (meditation) mudra consists of the right hand over the left, palms upward, in the lap. In the bhumisparsha (earth-touching) mudra, the right hand reaches down to the ground, calling the earth to witness the Buddha's enlightenment. The dharmachakra (Wheel of the Law, or teaching) mudra is a two-handed gesture with right thumb and index finger forming a circle. The abhaya (do not fear) mudra, with the right hand up, palm outward, is a gesture of protection or blessing. (427)

Mughal—"Descended from the Mongols." The Muslim rulers of India, 1526–1857. (975)

Muhaqqaq—A cursive style of Islamic *calligraphy.* (300)

mullion—A vertical member that divides a window or that separates one window from another. (381, 930)

mummification—A *technique* used by ancient Egyptians to preserve human bodies so that they may serve as the eternal home of the immortal *ka.* (61)

muqarnas—Stucco decorations of Islamic buildings in which stalactite-like forms break a structure's solidity. (274, 296, 9-27A)

mural—A wall painting. (22, 407, 408, 409)

Muslim—A believer in Islam. (976)

Mycenaean—The prehistoric art of the Late *Helladic* period in Greece, named after the citadel of Mycenae. (87)

mystery play—A dramatic enactment of the holy mysteries of the Christian faith performed at church portals and in city squares. (409, 538, 12-35A)

mystic marriage—A spiritual marriage of a woman with Christ. (549)

Nabis—Hebrew, "prophet." A group of *Symbolist* painters influenced by Paul Gauguin. (819)

naos—See *cella.* (33, 115, 618)

narthex—A porch or vestibule of a church, generally *colonnaded* or *arcaded* and preceding the *nave.* (243)

natatio—The swimming pool in a Roman bathing establishment. (220)

naturalism—The style of painted or sculptured representation based on close observation of the natural world that was at the core of the *classical* tradition. (401)

Naturalistic Surrealism—See *Surrealism.* (875)

nave—The central area of an ancient Roman *basilica* or of a church, demarcated from *aisles* by *piers* or *columns.* (189, 243, 413, 20-4A)

nave arcade—In *basilica* architecture, the series of *arches* supported by *piers* or *columns* separating the *nave* from the *aisles.* (373)

nduen fobara—A Kalabari Ijaw (Nigeria) ancestral screen in honor of a deceased chief of a trading house. (1060, 1061)

necropolis—Greek, "city of the dead." A large burial area or cemetery. (58, 171)

nembutsu—The six-syllable Japanese prayer professing faith in the compassion of Amida Buddha. (488)

nemes—In ancient Egypt, the linen headdress worn by the *pharaoh,* with the *uraeus* cobra of kingship on the front. (64)

Neoclassicism—A *style* of art and architecture that emerged in the late 18th century as part of a general revival of interest in *classical* cultures. Neoclassical artists adopted themes and styles from ancient Greece and Rome. (745)

Neo-Expressionism—An art movement that emerged in the 1970s and that reflects artists' interest in the expressive capability of art, seen earlier in *German Expressionism* and *Abstract Expressionism.* (905, 30-8D)

Neo-Gothic—The revival of the *Gothic style* in architecture, especially in the 19th century. (788)

Neolithic—The "new" Stone Age. (16)

Neoplasticism—The Dutch artist Piet Mondrian's theory of "pure plastic art," an ideal balance between the universal and the individual using an abstract formal vocabulary. (881)

Neue Sachlichkeit—German, "new objectivity." An art movement that grew directly out of the World War I experiences of a group of German artists who sought to show the horrors of the war and its effects. (872)

ngatu—Decorated *tapa* made by women in Tonga. (1053, 1054)

niello—A black metallic alloy. (100)

nihonga—A 19th-century Japanese painting style that incorporated some Western techniques in Japanese-style painting, as opposed to *yoga* (Western painting). (1019)

nimbus—A halo or aureole appearing around the head of a holy figure to signify divinity. (248, 441)

nio—A Japanese guardian figure. (17-17A)

nipote—Italian, "nephew." (21-41A)

nirvana—In Buddhism and Hinduism, a blissful state brought about by absorption of the individual soul or consciousness into the supreme spirit. Also called moksha. (423, 427)

nishiki-e—Japanese, "brocade pictures." Japanese polychrome *woodcut prints* valued for their sumptuous colors. (1015)

nkisi n'kondi—A power figure carved by the Kongo people of the Democratic Republic of Congo. Such images embodied spirits believed to heal and give life or to be capable of inflicting harm or death. (1066)

nomarch—Egyptian, "great/overlord." A regional governor during the Middle Kingdom. (3-16A)

Nun—In ancient Egypt, the primeval waters from which the creator god emerged. (57)

nymphs—In *classical* mythology, female divinities of springs, caves, and woods. (107)

oba—An African sacred king. (521, 19-13A)

oculus (pl. **oculi**)—Latin, "eye." The round central opening of a *dome.* Also, a small round window in a *Gothic cathedral.* (184, 202, 373, 14-6A, 21-31A)

odalisque—A woman in a Turkish harem. (761)

ogee arch—An *arch* composed of two double-curving lines meeting at a point. (420, 13-42A)

ogive (adj. **ogival**)—The diagonal *rib* of a *Gothic vault;* a pointed, or Gothic, *arch.* (369, 402, 927, 21-31A)

Ogoga—A Yoruba king. (1072)

oil painting—A painting *technique* using oil-based pigments that rose to prominence in northern Europe in the 15th century and is now the standard medium for painting on canvas. (538)

oni—An African ruler. (527)

Op Art—An artistic movement of the 1960s in which painters sought to produce optical illusions of motion and depth using only geometric forms on two-dimensional surfaces. (908)

opere francigeno—See *opus francigenum.* (366, 389)

opisthodomos—In ancient Greek architecture, a porch at the rear of a temple, set against the blank back wall of the *cella.* (115)

optical mixture—The visual effect of juxtaposed *complementary colors.* (813)

optical representation—The representation of people and objects seen from a fixed viewpoint. (35)

opus francigenum—Latin, "French work." Architecture in the *style* of *Gothic* France; *opere francigeno* (adj.), "in the French manner." (366, 389)

opus modernum—Latin, "modern work." The late medieval term for *Gothic* art and architecture. Also called *opus francigenum.* (365, 373, 389)

opus reticulatum—An ancient Roman method of facing *concrete* walls with lozenge-shaped bricks or stones to achieve a netlike ornamental surface pattern. (11-19A)

oracle—A prophetic message. (5-17A)

orant—In Early Christian art, a figure with both arms raised in the ancient gesture of prayer. (238)

oratory—The church of a Christian *monastery.* (267)

orbiculum—A disklike opening. (930)

orchestra—Greek, "dancing place." In ancient Greek theaters, the circular piece of earth with a hard and level surface on which the performance took place. (151)

order—In *classical* architecture, a *style* represented by a characteristic design of the *columns* and *entablature.* See also *superimposed orders.* (116)

Orientalizing—The early phase of *Archaic* Greek art (seventh century BCE), so named because of the adoption of forms and motifs from the ancient Near East and Egypt. See also *Daedalic.* (109)

Orphism—A form of *Cubism* developed by the French painter Robert Delaunay in which color plays an important role. (848)

orrery—A mechanical model of the solar system demonstrating how the planets revolve around the sun. (727)

orthogonal—A line imagined to be behind and perpendicular to the picture *plane;* the orthogonals in a painting appear to recede toward a *vanishing point* on the horizon. (547, 567)

orthogonal plan—The imposition of a strict grid *plan* on a site, regardless of the terrain, so that all streets meet at right angles. See also *Hippodamian plan.* (154)

Ottonian (adj.)—Pertaining to the empire of Otto I and his successors. (324)

overglaze—In *porcelain* decoration, the technique of applying mineral colors over the *glaze* after the work has been fired. The overglaze colors, or *enamels,* fuse to the glazed surface in a second firing at a much lower temperature than the main firing. See also *underglaze.* (992)

oxidizing—The first phase of the ancient Greek ceramic firing process, which turned both the pot and the clay *slip* red. During the second (reducing) phase, the oxygen supply into the kiln was shut off, and both pot and slip turned black. In the final (reoxidizing) phase, the pot's coarser material reabsorbed oxygen and became red again, whereas the smoother slip did not and remained black. (110)

pagoda—An East Asian tower, usually associated with a Buddhist temple, having a multiplicity of winged *eaves;* thought to be derived from the Indian *stupa.* (467, 986)

pala—A panel placed behind and over the altar in a church. (9-26A)

palaestra—An ancient Greek and Roman exercise area, usually framed by a *colonnade.* In Greece, the palaestra was an independent building; in Rome, palaestras were also frequently incorporated into a bathing complex. (133, 220)

Paleolithic—The "old" Stone Age, during which humankind produced the first sculptures and paintings. (16, 522)

palette—A thin board with a thumb hole at one end on which an artist lays and mixes *colors;* any surface so used. Also, the colors or kinds of colors characteristically used by an artist. In ancient Egypt, a slate slab used for preparing makeup. (20, 55)

palette knife—A flat tool used to scrape paint off the *palette.* Artists sometimes also use the palette knife in place of a brush to apply paint directly to the canvas. (777)

Pantokrator—Greek, "ruler of all." Christ as ruler and judge. (272)

papier collé—French, "stuck paper." See *collage.* (850)

papyrus—A plant native to Egypt and adjacent lands used to make paperlike writing material; also, the material or any writing on it. (56, 249)

parade helmet—A masklike helmet worn by Roman soldiers on special ceremonial occasions. (336)

parallel hatching—See *hatching.* (555)

parapet—A low, protective wall along the edge of a balcony, roof, or bastion. (416)

parchment—Lambskin prepared as a surface for painting or writing. (249, 604)

parekklesion—The side chapel in a Byzantine church. (279)

parinirvana—Image of the reclining Buddha, a position often interpreted as representing his death. (427)

parthenos—Greek, "virgin." The epithet of Athena, the virgin goddess. (107)

passage grave—A prehistoric tomb with a long stone corridor leading to a burial chamber covered by a great *tumulus.* (27)

Passional—A Christian book containing the lives of *saints.* (312)

Passover—The annual feast celebrating the release of the Jews from bondage to the *pharaohs* of Egypt. (240)

pastel—A powdery paste of pigment and gum used for making crayons; also, the pastel crayons themselves. (809)

paten—A large shallow bowl or plate for the bread used in the *Eucharist.* (264)

patrician—A Roman freeborn landowner. (181)

patron—The person or entity that pays an artist to produce individual artworks or employs an artist on a continuing basis. (6)

pebble mosaic—A *mosaic* made of irregularly shaped stones of various *colors.* (149, 245)

pectoral—An ornament on the chest. (167)

pediment—In *classical* architecture, the triangular space (gable) at the end of a building, formed by the ends of the sloping roof above the *colonnade;* also, an ornamental feature having this shape. (105, 116, 582)

pendant—The large hanging terminal element of a *Gothic* fan *vault.* (391)

pendentive—A concave, triangular section of a hemisphere, four of which provide the transition from a square area to the circular base of a covering *dome.* Although pendentives appear to be hanging (pendant) from the dome, they in fact support it. (262, 585, 614)

Pentateuch—The first five books of the Old Testament. (235, 312)

peplos (pl. **peploi**)—A simple, long belted garment of wool worn by women in ancient Greece. (114)

Performance Art—An American *avant-garde* art trend of the 1960s that made time an integral element of art. It produced works in which movements, gestures, and sounds of persons communicating with an audience replace physical objects. Documentary photographs are generally the only evidence remaining after these events. See also *Happenings.* (993, 1019)

period style—See *style.* (3)

peripteral—See *peristyle.* (115)

peristyle—In *classical* architecture, a *colonnade* all around the *cella* and its porch(es). A peripteral colonnade consists of a single row of *columns* on all sides; a dipteral colonnade has a double row all around. (115, 190)

Perpendicular—A Late English *Gothic style* of architecture distinguished by the pronounced verticality of its decorative details. (391)

personal style—See *style.* (4)

personification—An *abstract* idea represented in bodily form. (5)

perspective—A method of presenting an illusion of the three-dimensional world on a two-dimensional surface. In linear perspective, the most common type, all parallel lines or surface edges converge on one, two, or three vanishing points located with reference to the eye level of the viewer (the horizon line of the picture), and associated objects are rendered smaller the far-

ther from the viewer they are intended to seem. Atmospheric, or aerial, perspective creates the illusion of distance by the greater diminution of color intensity, the shift in color toward an almost neutral blue, and the blurring of contours as the intended distance between eye and object increases. (8, 409, 547, 565, 567)

pfemba—A Yombe (Democratic Republic of Congo) mother-and-child group. (1066)

pharaoh (adj. **pharaonic**)—An ancient Egyptian king. (55)

phersu—A masked man who appears in scenes of Etruscan funerary games. (165)

philosophe—French, "thinker, philosopher." The term applied to French intellectuals of the *Enlightenment.* (736)

Phoibos—Greek, "radiant." The epithet of the Greek god Apollo. (107)

photomontage—A *composition* made by pasting together pictures or parts of pictures, especially photographs. See also *collage.* (835)

Photorealism—See *Superrealism.* (917)

physical evidence—In art history, the examination of the materials used to produce an artwork in order to determine its date. (2)

piano nobile—Italian, "noble floor." The main (second) floor of a building. (21-37A)

piazza—Italian, "plaza." (672)

pictograph—A picture, usually stylized, that represents an idea; also, writing using such means; also, painting on rock. See also *hieroglyphic.* (32)

Picturesque garden—An "unordered" garden designed in accord with the *Enlightenment* taste for the natural. (750)

pier—A vertical, freestanding masonry support. (12, 72, 184)

Pietà—A painted or sculpted representation of the Virgin Mary mourning over the body of the dead Christ. (241, 396, 544, 842)

pilaster—A flat, rectangular, vertical member projecting from a wall of which it forms a part. It usually has a *base* and a *capital* and is often *fluted.* (175, 575)

pillar—Usually a weight-carrying member, such as a *pier* or a *column;* sometimes an isolated, freestanding structure used for commemorative purposes. (71, 72)

pinakotheke—Greek, "picture gallery." An ancient Greek building for the display of paintings on wood panels. (139)

pinnacle—In *Gothic* churches, a sharply pointed ornament capping the *piers* or flying *buttresses;* also used on church *facades.* (373, 411, 413, 27-43A)

Pittura Metafisica—Italian, "metaphysical painting." An early-20th-century Italian art movement led by Giorgio de Chirico, whose work conveys an eerie mood and visionary quality. (875)

pixels—Shortened form of "picture elements." The tiny boxes that make up digital images displayed on a computer monitor. (938)

plan—The horizontal arrangement of the parts of a building or of the buildings and streets of a city or town, or a drawing or diagram showing such an arrangement. In an axial plan, the parts of a building are organized longitudinally, or along a given axis; in a central plan, the parts of the structure are of equal or almost equal dimensions around the center. (12)

plane—A flat surface. (7)

plate tracery—See *tracery.* (375)

Plateresque—A style of Spanish architecture characterized by elaborate decoration based on *Gothic,* Italian *Renaissance,* and Islamic sources; derived from the Spanish word *platero,* meaning "silversmith." (664)

platero—See *Plateresque.* (664)

plebeian—The Roman social class that included small farmers, merchants, and freed slaves. (181)

plein air—An approach to painting very popular among the *Impressionists,* in which an artist sketches outdoors to achieve a quick impression of light, air, and color. The artist then takes the sketches to the studio for reworking into more finished works of art. (798, 799, 801, 805, 806, 28-2A, 28-7A)

poesia—A term describing "poetic" art, notably Venetian *Renaissance* painting, which emphasizes the lyrical and sensual. (626)

pointed arch—A narrow *arch* of pointed profile, in contrast to a semicircular arch. (3, 368, 402, 420, 977, 12-10A, 21-31A)

pointillism—A system of painting devised by the 19th-century French painter Georges Seurat. The artist separates *color* into its component parts and then applies the component colors to the canvas in tiny dots (points). The image becomes comprehensible only from a distance, when the viewer's eyes optically blend the pigment dots. Sometimes referred to as divisionism. (812)

polis (pl. **poleis**)—An independent *city-state* in ancient Greece. (106)

polyptych—An *altarpiece* composed of more than three sections. (538)

polytheism—The belief in multiple gods. (233)

pontifex maximus—Latin, "chief priest." The high priest of the Roman state religion, often the emperor himself. (197)

Pop Art—A term coined by British art critic Lawrence Alloway to refer to art, first appearing in the 1950s, that incorporated elements from consumer culture, the mass media, and popular culture, such as images from motion pictures and advertising. (899)

porcelain—Extremely fine, hard, white ceramic. Unlike *stoneware,* porcelain is made from a fine white clay called kaolin mixed with ground petuntse, a type of feldspar. True porcelain is translucent and rings when struck. (451, 992)

portico—A roofed *colonnade;* also an entrance porch. (154, 576)

positivism—A Western philosophical model that promoted science as the mind's highest achievement. (775)

post-and-lintel system—A system of construction in which two posts support a *lintel.* (28)

Post-Impressionism—The term used to describe the stylistically heterogeneous work of the group of late-19th-century painters in France, including van Gogh, Gauguin, Seurat, and Cézanne, who more systematically examined the properties and expressive qualities of *line,* pattern, *form,* and *color* than the *Impressionists* did. (811)

postmodernism—A reaction against *modernist formalism,* seen as elitist. Far more encompassing and accepting than the more rigid confines of modernist practice, postmodernism offers something for everyone by accommodating a wide range of *styles,* subjects, and formats, from traditional easel painting to *installation* and from *abstraction* to *illusionistic* scenes. Postmodern art often includes irony or reveals a self-conscious awareness on the part of the artist of art-making processes or the workings of the art world. (929)

Post-Painterly Abstraction—An American art movement that emerged in the 1960s and was characterized by a cool, detached rationality emphasizing tighter pictorial control. See also *color-field painting* and *hard-edge painting.* (907)

pou tokomanawa—A sculpture of an ancestor that supports a *ridgepole* of a Maori (New Zealand) meetinghouse. (1043)

pouncing—The method of transferring a sketch onto paper or a wall by tracing, using thin paper or transparent gazelle skin placed on top of the sketch, pricking the contours of the design into the skin or paper with a pin, placing the skin or paper on the surface to be painted, and forcing black pigment through the holes. (482, 979, 32-5A)

poupou—A decorated wall panel in a Maori (New Zealand) meetinghouse. (1043, 1055)

Poussiniste—A member of the French Royal Academy of Painting and Sculpture during the early 18th century who followed Nicolas Poussin in insisting that *form* was the most important element of painting. See also *Rubéniste.* (733)

powwow—A traditional Native American ceremony featuring dancing in quilled, beaded, and painted costumes. (1040)

prasada—In Hindu worship, food that becomes sacred by first being given to a god. (441)

Precisionism—An American art movement of the 1920s and 1930s. The Precisionists concentrated on portraying man-made environments in a clear and concise manner to express the beauty of perfect and precise machine forms. (867)

pre-Columbian (adj.)—The cultures that flourished in the Western Hemisphere before the arrival of Christopher Columbus and the beginning of European contact and conquest. (492)

predella—The narrow ledge on which an *altarpiece* rests on an altar. (411)

prefiguration—In Early Christian art, the depiction of Old Testament persons and events as prophetic forerunners of Christ and New Testament events. (238, 547, 561)

primary colors—Red, yellow, and blue—the *colors* from which all other colors may be derived. (7, 813)

primitivism—The incorporation in early-20th-century Western art of stylistic elements from the artifacts of Africa, Oceania, and the native peoples of the Americas. (845, 846)

princeps—Latin, "first citizen." The title Augustus and his successors as Roman emperor

used to distinguish themselves from Hellenistic monarchs. (197)

print—An artwork on paper, usually produced in multiple impressions. (556)

Productivism—An art movement that emerged in the Soviet Union after the Russian Revolution; its members believed that artists must direct art toward creating products for the new society. (860)

pronaos—The space, or porch, in front of the *cella,* or naos, of an ancient Greek temple. (115)

proportion—The relationship in size of the parts of persons, buildings, or objects, often based on a *module.* (10)

proscenium—The part of a theatrical stage in front of the curtain. (675)

prostyle—A *classical* temple *plan* in which the *columns* are only in front of the *cella* and not on the sides or back. (115)

protome—The head, forelegs, and part of the body of an animal. (51)

provenance—Origin or source; *findspot.* (3)

psalter—A book containing the Psalms. (312, 550)

pseudoperipteral—In Roman architecture, a pseudoperipteral temple has a series of engaged *columns* all around the sides and back of the *cella* to give the appearance of a *peripteral colonnade.* (182)

pueblo—A communal multistoried dwelling made of stone or *adobe* brick by the Native Americans of the Southwest. Uppercase *Pueblo* refers to various groups that occupied such dwellings. (518, 1032)

pukao—A small red scoria cylinder serving as a topknot or hat on Easter Island *moai.* (1052)

pulpit—A raised platform in a church or *mosque* on which a priest or *imam* stands while leading the religious service. (402)

pulque—An intoxicating drink, similar to tequila, consumed during *Mesoamerican* religious rituals. (18-7A)

punchwork—Tooled decorative work in *gold leaf.* (412)

Purism—An early-20th-century art movement that embraced the "machine aesthetic" and sought purity of *form* in the clean functional lines of industrial machinery. (853)

purlins—Horizontal *beams* in a roof structure, parallel to the *ridgepoles,* resting on the main *rafters* and giving support to the secondary rafters. (457)

putto (pl. putti)—A cherubic young boy. (570)

pylon—The wide entrance gateway of an Egyptian temple, characterized by its sloping walls. (72)

pyxis (pl. pyxides)—A cylindrical container with a hemispherical lid. (293)

qibla—The direction (toward Mecca) Muslims face when praying. (288, 289, 529)

quadrant arch—An *arch* whose curve extends for one-quarter of a circle's circumference. (359)

quadrifrons—Latin, "four-fronted." An *arch* with four equal *facades* and four *arcuated bays.* (23-14A)

quadro riportato—A ceiling design in which painted scenes are arranged in panels that resemble framed pictures transferred to the surface of a shallow, curved *vault.* (680)

quatrefoil—A shape or plan in which the parts assume the form of a cloverleaf. (419)

Quattrocento—Italian, "400," that is, the 1400s or 15th century. (559)

quoins—The large, sometimes *rusticated,* usually slightly projecting stones that often form the corners of the exterior walls of masonry buildings. (621)

radiating chapels—In medieval churches, chapels for the display of *relics* that opened directly onto the *ambulatory* and the *transept.* (337)

radiocarbon dating—A method of measuring the decay rate of carbon isotopes in organic matter to determine the age of organic materials such as wood and fiber. (22, 523)

rafters—The sloping supporting timber planks that run from the *ridgepole* of a roof to its edge. (457)

raking cornice—The *cornice* on the sloping sides of a *pediment.* (116)

ramparts—Defensive wall circuits. (382)

ratha—Small, freestanding Hindu temple *carved* from a huge boulder. (437)

Rayograph—A photograph produced without a camera by placing objects on photographic paper and then exposing the paper to light; named for the American artist Man Ray. (864)

Rayonnant—The "radiant" style of *Gothic* architecture, dominant in the second half of the 13th century and associated with the French royal court of Louis IX at Paris. (381)

Realism—A movement that emerged in mid-19th-century France. Realist artists represented the subject matter of everyday life (especially subjects that previously had been considered inappropriate for depiction) in a relatively *naturalistic* mode. (775)

red-figure painting—In later Greek pottery, the silhouetting of red figures against a black background, with painted linear details; the reverse of *black-figure painting.* (121)

reducing—See *oxidizing.* (110)

refectory—The dining hall of a Christian *monastery.* (267, 576)

regional style—See *style.* (3)

Regionalism—A 20th-century American art movement that portrayed American rural life in a clearly readable, *Realist* style. Major Regionalists include Grant Wood and Thomas Hart Benton. (889)

register—One of a series of superimposed bands or *friezes* in a pictorial narrative, or the particular levels on which motifs are placed. (31)

relics—The body parts, clothing, or objects associated with a holy figure, such as the Buddha or Christ or a Christian *saint.* (243, 336, 984, 1064)

relief—In sculpture, figures projecting from a background of which they are part. The degree of relief is designated high, low (bas), or sunken. In the last, the artist cuts the design into the surface so that the highest projecting parts of the image are no higher than the surface itself. See also *repoussé.* (556)

relief sculpture—See *relief.* (12, 18)

relieving triangle—In *Mycenaean* architecture, the triangular opening above the *lintel* that serves to lighten the weight to be carried by the lintel itself. (99)

reliquary—A container for holding *relics.* (328, 334, 336, 430, 1064)

ren—Chinese, "human-heartedness." The quality that the ideal Confucian *junzi* possesses. (463)

Renaissance—French, "rebirth." The term used to describe the history, culture, and art of 14th- through 16th-century western Europe during which artists consciously revived the *classical* style. (401, 406)

renovatio—Latin, "renewal." During the *Carolingian* period, Charlemagne sought to revive the culture of ancient Rome (renovatio imperi Romani). (317, 318, 402)

reoxidizing—See *oxidizing.* (110)

repoussé—Formed in *relief* by beating a metal plate from the back, leaving the impression on the face. The metal sheet is hammered into a hollow *mold* of wood or some other pliable material and finished with a *graver.* See also *relief.* (100, 248, 320, 354, 2-26A)

respond—An engaged *column, pilaster,* or similar element that either projects from a *compound pier* or some other supporting device or is bonded to a wall and carries one end of an *arch.* (373)

retable—An architectural screen or wall above and behind an altar, usually containing painting, sculpture, or other decorations. See also *altarpiece.* (538)

revetment—In architecture, a wall covering or facing. (184, 418)

rhyton—A pouring vessel. (51)

rib—A relatively slender, molded masonry *arch* that projects from a surface. In *Gothic* architecture, the ribs form the framework of the *vaulting.* A diagonal rib is one of the ribs that form the X of a *groin vault.* A transverse rib crosses the *nave* or *aisle* at a 90° angle. (12, 351, 21-31A)

rib vault—A *vault* in which the diagonal and transverse *ribs* compose a structural skeleton that partially supports the masonry *web* between them. (351, 368, 14-5A)

ridgepole—The *beam* running the length of a building below the peak of the gabled roof.

rocaille—See *Rococo.* (117, 480, 1043)

Rococo—A style, primarily of interior design, that appeared in France around 1700. Rococo interiors featured lavish decoration, including small sculptures, ornamental mirrors, easel paintings, *tapestries, reliefs,* wall paintings, and elegant furniture. The term Rococo derived from the French word *rocaille* (pebble) and referred to the small stones and shells used to decorate grotto interiors. (728)

Romanesque—"Roman-like." A term used to describe the history, culture, and art of medieval western Europe from ca. 1050 to ca. 1200. (333, 413, 588)

Romanticism—A Western cultural phenomenon, beginning around 1750 and ending about 1850, that gave precedence to feeling and imagination over reason and thought. More narrowly, the art movement that flourished from about 1800 to 1840. (762)

roof comb—The elaborately sculpted vertical projection surmounting a Maya temple-pyramid. (500)

rose window—A circular *stained-glass* window. (412, 13-3A)

rostrum—Speaker's platform. (929)

rotulus—The manuscript scroll used by Egyptians, Greeks, Etruscans, and Romans; predecessor of the *codex*. (249, 1023)

rotunda—The circular area under a *dome;* also a domed round building. (472, 538)

roundel—See *tondo*. (219, 585, 10-15A)

rubbing—An impression of a relief made by placing paper over the surface and rubbing with a pencil or crayon. (456)

Rubéniste—A member of the French Royal Academy of Painting and Sculpture during the early 18th century who followed Peter Paul Rubens in insisting that *color* was the most important element of painting. See also *Poussiniste*. (733)

rusticate (n. rustication)—To give a rustic appearance by roughening the surfaces and beveling the edges of stone blocks to emphasize the joints between them. Rustication is a technique employed in ancient Roman architecture, and was also popular during the *Renaissance,* especially for stone *courses* at the ground-floor level. (201, 586)

sabi—Japanese; the value found in the old and weathered, suggesting the tranquility reached in old age. (1012)

sacra conversazione—Italian, "holy conversation." A style of *altarpiece* painting popular after the middle of the 15th century, in which *saints* from different epochs are joined in a unified space and seem to be conversing either with one another or with the audience. (624)

sacra rappresentazione (pl. **sacre rappresentazioni)**—Italian, "holy representation." A more elaborate version of a *mystery play* performed for a lay audience by a *confraternity.* (409)

sacramentary—A Christian religious book incorporating the prayers priests recite during *Mass*. (312)

saint—From the Latin word *sanctus,* meaning "made holy by God." Applied to persons who suffered and died for their Christian faith or who merited reverence for their Christian devotion while alive. In the Roman Catholic Church, a worthy deceased Catholic who is canonized by the pope. (237, 402)

Saint-Simonianism—An early-19th-century utopian movement that emphasized the education and enfranchisement of women. (779)

sakkos—The tunic worn by a Byzantine priest. (9-35A)

saltimbanque—An itinerant circus performer. (29-11A)

Samarqand ware—A type of Islamic pottery produced in Samarqand and Nishapur in which the ceramists formed the shape of the vessel from dark pink clay and then immersed it in a tub of white slip, over which they painted ornamental or *calligraphic* decoration and which they sealed with a transparent glaze before firing. (294)

samsara—In Hindu belief, the rebirth of the soul into a succession of lives. (427, 435)

samurai—Medieval Japanese warriors. (1006)

sand painting—A temporary painting *technique* using sand, varicolored powdered stones, corn pollen, and charcoal. Sand paintings, also called dry paintings, are integral parts of sacred Navajo rituals. (1032)

sangha—The Buddhist *monastic* order. (15-8A)

sarcophagus (pl. **sarcophagi)**—Greek, "consumer of flesh." A coffin, usually of stone. (402, 449)

Satimbe—"Sister on the head." A Dogon (Mali) mask representing all women. (1074)

saturation—See *color*. (7, 813)

satyr—A Greek mythological follower of Dionysos having a man's upper body, a goat's hindquarters and horns, and a horse's ears and tail. (159, 27-33A)

saz—Ottoman design of sinuous curved leaves and complex blossoms, a Turkish term recalling an enchanted forest. (10-27A)

scarab—An Egyptian gem in the shape of a beetle. (61)

scarification—Decorative markings on the human body made by cutting or piercing the flesh to create scars. (525)

Scholasticism—The *Gothic* school of philosophy in which scholars applied Aristotle's system of rational inquiry to the interpretation of religious belief. (372)

school—A chronological and stylistic classification of works of art with a stipulation of place. (6)

screen facade—A *facade* that does not correspond to the structure of the building behind it. (12-11A)

scriptorium (pl. **scriptoria)**—The writing studio of a *monastery*. (311)

scudi—Italian, "shields." A coin denomination in 17th-century Italy. (684)

sculpture in the round—Freestanding figures, *carved* or *modeled* in three dimensions. (12, 18)

seal—In Asian painting, a stamp affixed to a painting to identify the artist, the *calligrapher,* or the owner. See also *cylinder seals*. (997)

secco—Italian, "dry." See also *fresco*. (408, 603)

Second Style mural—The style of Roman *mural* painting in which the aim was to dissolve the confining walls of a room and replace them with the illusion of a three-dimensional world constructed in the artist's imagination. (192)

secondary colors—Orange, green, and purple, obtained by mixing pairs of *primary colors* (red, yellow, blue). (7, 813)

section—In architecture, a diagram or representation of a part of a structure or building along an imaginary *plane* that passes through it vertically. Drawings showing a theoretical slice across a structure's width are lateral sections. Those cutting through a building's length are longitudinal sections. See also *elevation* and *cutaway*. (12)

sedes sapientiae—Latin, "throne of wisdom." A Romanesque sculptural type depicting the Virgin Mary with the Christ Child in her lap. (349)

segmental pediment—A *pediment* with a curved instead of a triangular *cornice*. (621)

senate—Latin senatus, "council of elders." The Senate was the main legislative body in Roman constitutional government. (181)

serdab—A small concealed chamber in an Egyptian *mastaba* for the *statue* of the deceased. (58)

Severe Style—The Early *Classical* style of Greek sculpture, ca. 480–450 BCE. (128)

sexpartite vault—See *vault*. (358)

sfumato—Italian, "smoky." A smokelike haziness that subtly softens outlines in painting; particularly applied to the paintings of Leonardo da Vinci and Correggio. (539, 604)

sgrafitto—A Chinese ceramic technique in which the design is *incised* through a colored *slip*. (467)

shaft—The tall, cylindrical part of a *column* between the *capital* and the *base*. (51, 116, 373)

shakti—In Hinduism, the female power of the deity Devi (or Goddess), which animates the matter of the cosmos. (435)

shaykh—An Islamic mystic *saint*. (975)

sherd—A fragmentary piece of a broken ceramic vessel. (476)

shikara—The beehive-shaped tower of a northern-style Hindu temple. (439)

Shingon—The primary form of Buddhism in Japan through the mid-10th century. Lowercase *shingon* is the Japanese term for the words or syllables recited in Buddhist rituals. (483)

Shino—Japanese ceramic wares produced during the late 16th and early 17th centuries in kilns in Mino. (1012)

shogun—In 12th- through 19th-century Japan, a military governor who managed the country on behalf of a figurehead emperor. (486, 1006)

shogunate—The Japanese military government of the 12th through 19th centuries. (486, 1006)

sibyl—A Greco-Roman mythological prophetess. (540)

signoria—The governing body in the Republic of Florence. (563)

silentiary—An usher responsible for maintaining silence in the *Byzantine* imperial palace in Constantinople. (261)

silk-screen printing—An industrial printing *technique* that creates a sharp-edged image by pressing ink through a design on silk or a similar tightly woven porous fabric stretched tight on a frame. (915)

silverpoint—A *stylus* made of silver, used in drawing in the 14th and 15th centuries because of the fine *line* it produced and the sharp point it maintained. (545, 604)

Simultanéisme—Robert Delaunay's version of *Cubism* in which he created spatial effects and kaleidoscopic movement solely through color contrasts; also known as *Orphism*. (848)

simultaneous contrasts—The phenomenon of juxtaposed *colors* affecting the eye's reception of each, as when a painter places dark green next to light green, making the former appear even darker and the latter even lighter. See also *successive contrasts*. (813)

sinopia—A burnt-orange pigment used in *fresco* painting to transfer a *cartoon* to the *arriccio* before the artist paints the plaster. (408)

siren—In ancient Greek mythology, a creature that was part bird and part woman. (110)

sistrum—An Egyptian percussion instrument or rattle. (95)

site-specific art—Art created for a specific location. See also *Environmental Art.* (932)

skene—Greek, "stage." The stage of a *classical* theater. (151)

skenographia—Greek, "scene painting"; the Greek term for *perspective* painting. (193)

skiagraphia—Greek, "shadow painting." The Greek term for shading, said to have been invented by Apollodoros, an Athenian painter of the fifth century BCE. (149)

slip—A mixture of fine clay and water used in ceramic decoration. (110, 451)

solidus (pl. **solidi**)—A Byzantine gold coin. (263)

space—In art history, both the actual area an object occupies or a building encloses, and the *illusionistic* representation of space in painting and sculpture. (8)

spandrel—The roughly triangular space enclosed by the curves of adjacent *arches* and a horizontal member connecting their vertexes; also, the space enclosed by the curve of an *arch* and an enclosing right angle. The area between the arch proper and the framing *columns* and *entablature.* (206)

spectrum—The range or band of visible colors in natural light. (7)

sphinx—A mythical Egyptian beast with the body of a lion and the head of a human. (63)

splashed-ink painting—See *haboku.* (1008)

springing—The lowest stone of an *arch,* resting on the *impost block.* In *Gothic vaulting,* the lowest stone of a diagonal or transverse *rib.* (340, 373)

squinch—An architectural device used as a transition from a square to a polygonal or circular base for a *dome.* It may be composed of *lintels, corbels,* or *arches.* (262)

stained glass—In *Gothic* architecture, the colored glass used for windows. (12, 373, 375, 982)

stamp seal—See *cylinder seal.* (39)

stanza (pl. **stanze**)—Italian, "room." (606)

statue—A three-dimensional sculpture. (12)

stave—A wedge-shaped timber; vertically placed staves embellish the architectural features of a building. (311)

stele (pl. **stelae**)—A *carved* stone slab used to mark graves or to commemorate historical events. (36, 499)

stem stitching—See *embroidery.* (362)

stigmata—In Christian art, the wounds Christ received at his crucifixion that miraculously appear on the body of a *saint.* (405)

still life—A picture depicting an arrangement of inanimate objects. (5, 196, 687)

stoa—In ancient Greek architecture, an open building with a roof supported by a row of *columns* parallel to the back wall. A covered *colonnade* or *portico.* (154)

Stoic—A philosophical school of ancient Greece, named after the *stoas* in which the philosophers met. (154)

stoneware—Pottery fired at high temperatures to produce a stonelike hardness and density. (451, 992)

strategos—Greek, "general." (133)

stretcher bar—One of a set of wooden bars used to stretch canvas to provide a taut surface for painting. (543)

strigil—A tool ancient Greek athletes used to scrape oil from their bodies after exercising. (147)

stringcourse—A raised horizontal *molding,* or band, in masonry. Its principal use is ornamental but it usually reflects interior structure. (586, 11-19A)

strut—A timber plank or other structural member used as a support in a building. Also a short section of marble used to support an arm or leg in a *statue.* (457)

stucco—A type of plaster used as a coating on exterior and interior walls. Also used as a sculptural *medium.* (182)

stupa—A large, mound-shaped Buddhist shrine. (429, 430, 984, 986)

style—A distinctive artistic manner. Period style is the characteristic style of a specific time. Regional style is the style of a particular geographical area. Personal style is an individual artist's unique manner. (3)

stylistic evidence—In art history, the examination of the *style* of an artwork in order to determine its date or the identity of the artist. (3)

stylobate—The uppermost course of the platform of a *classical* Greek temple, which supports the *columns.* (116, 618)

stylus—A needlelike tool used in *engraving* and *incising;* also, an ancient writing instrument used to inscribe clay or wax tablets. (33, 196, 545, 556, 604)

sub gracia—Latin, "under grace." In Christian thought, the period after the coming of Christ. (392)

sub lege—Latin, "under the law." In Christian thought, the period after Moses received the Ten Commandments and before the coming of Christ. See also *sub gracia.* (392)

subtractive light—The painter's light in art; the light reflected from pigments and objects. See also *additive light.* (7)

subtractive sculpture—A kind of sculpture technique in which materials are taken away from the original mass; *carving.* (11, 64)

successive contrasts—The phenomenon of colored afterimages. When a person looks intently at a *color* (green, for example) and then shifts to a white area, the fatigued eye momentarily perceives the *complementary color* (red). See also *simultaneous contrasts.* (813)

sultan—A *Muslim* ruler. (292, 977)

sunken relief—See *relief.* (73)

Sunnah—The collection of the Prophet Muhammad's moral sayings and descriptions of his deeds. (285)

superimposed orders—*Orders* of architecture that are placed one above another in an *arcaded* or *colonnaded* building, usually in the following sequence: *Doric* (the first story), *Ionic,* and *Corinthian.* Superimposed orders are found in later Greek architecture and were used widely by Roman and *Renaissance* builders. (204)

superimposition—In *Mesoamerican* architecture, the erection of a new structure on top of, and incorporating, an earlier structure; the nesting of a series of buildings inside each other. (1026)

Superrealism—A *school* of painting and sculpture of the 1960s and 1970s that emphasized producing artworks based on scrupulous fidelity to optical fact. The Superrealist painters were also called Photorealists because many used photographs as sources for their imagery. (917)

Suprematism—A type of art formulated by Kazimir Malevich to convey his belief that the supreme reality in the world is pure feeling, which attaches to no object and thus calls for new, nonobjective forms in art—shapes not related to objects in the visible world. (859)

surah—A chapter of the *Koran,* divided into verses. (285)

Surrealism—A successor to *Dada,* Surrealism incorporated the improvisational nature of its predecessor into its exploration of the ways to express in art the world of dreams and the unconscious. Biomorphic Surrealists, such as Joan Miró, produced largely *abstract compositions. Naturalistic* Surrealists, notably Salvador Dalí, presented recognizable scenes transformed into a dream or nightmare image. (875)

sutra—In Buddhism, an account of a sermon by or a dialogue involving the Buddha. A scriptural account of the Buddha. See also *jataka.* (480)

symbol—An image that stands for another image or encapsulates an idea. (5)

Symbolism—A late-19th-century movement based on the idea that the artist was not an imitator of nature but a creator who transformed the facts of nature into a *symbol* of the inner experience of that fact. (819)

symmetria—Greek, "commensurability of parts." Polykleitos's treatise on his *canon* of proportions incorporated the principle of symmetria. (135)

symposium—An ancient Greek banquet attended solely by men (and female servants and prostitutes). (108)

Synthetic Cubism—A later phase of *Cubism,* in which paintings and drawings were constructed from objects and shapes cut from paper or other materials to represent parts of a subject, in order to engage the viewer with pictorial issues, such as figuration, realism, and abstraction. (848)

taberna—In Roman architecture, a single-room shop usually covered by a barrel *vault.* (209)

tablero—See *talud-tablero construction.* (496)

tablinum—The study or office in a Roman house. (190)

taj—Arabic and Persian, "crown." (980)

talud-tablero construction—The alternation of sloping (talud) and vertical (tablero) rubble layers, characteristic of Teotihuacan architecture in Mesoamerica. (496)

tapa—Barkcloth made particularly in Polynesia. Tapa is often dyed, painted, stenciled, and sometimes perfumed. (1053)

tapestry—A weaving *technique* in which the *weft* threads are packed densely over the *warp* threads so that the designs are woven directly into the fabric. (362, 513, 730)

tatami—The traditional woven straw mat used for floor covering in Japanese architecture. (1011)

tatanua—In New Ireland (Papua New Guinea), the spirits of the dead. (1049)

tatau—*See tattoo.* (1054)

tattoo—A permanent design on the skin produced using indelible dyes. The term derives from the Tahitian, Samoan, and Tongan word *tatau* or *tatu.* (1054)

tatu—See *tattoo.* (1054)

technique—The processes artists employ to create *form,* as well as the distinctive, personal ways in which they handle their materials and tools. (7)

tempera—A *technique* of painting using pigment mixed with egg yolk, glue, or casein; also, the *medium* itself. (219, 404, 502, 538, 539)

templon—The columnar screen separating the sanctuary from the main body of a *Byzantine* church. (277)

tenebrism—Painting in the "shadowy manner," using violent contrasts of light and dark, as in the work of Caravaggio. The term derives from *tenebroso.* (683)

tenebroso—Italian, "shadowy." See *tenebrism.* (683)

tenon—A projection on the end of a piece of wood that is inserted into a corresponding hole (mortise) in another piece of wood to form a joint. (480)

tephra—The volcanic ash produced by the eruption on the *Cycladic* island of Thera. (92)

tepidarium—The warm-bath section of a Roman bathing establishment. (220)

terminus ante quem—Latin, "point [date] before which." (2)

terminus post quem—Latin, "point [date] after which." (2)

terracotta—Hard-baked clay, used for sculpture and as a building material. It may be *glazed* or painted. (90, 414)

tessera (pl. **tesserae**)—Greek, "cube." A tiny stone or piece of glass cut to the desired shape and size for use in forming a *mosaic.* (150, 245, 291, 299)

tetrarch—One of four corulers. (224)

tetrarchy—Greek, "rule by four." A type of Roman government established in the late third century CE by Diocletian in an attempt to foster order by sharing power with potential rivals. (224)

texture—The quality of a surface (rough, smooth, hard, soft, shiny, dull) as revealed by light. In represented texture, a painter depicts an object as having a certain texture even though the pigment is the real texture. (8)

theatron—Greek, "place for seeing." In ancient Greek theaters, the slope overlooking the *orchestra* on which the spectators sat. (151)

Theotokos—Greek, "she who bore God." The Virgin Mary, the mother of Jesus. (245, 267)

thermoluminescence—A method of dating by measuring amounts of radiation found within the clay of ceramic or sculptural forms, as well as in the clay cores from metal castings. (523)

Third Style mural—In Roman *mural* painting, the style in which delicate linear fantasies were sketched on predominantly *monochromatic* backgrounds. (194)

tholos (pl. **tholoi**)—A temple with a circular plan. Also, the burial chamber of a *tholos tomb.* (99, 151, 618)

tholos tomb—In *Mycenaean* architecture, a beehive-shaped tomb with a circular plan. (99)

thrust—The outward force exerted by an *arch* or a *vault* that must be counterbalanced by a *buttress.* (184, 21-31A)

tiki—A Marquesas Islands (Polynesia) three-dimensional carving of an exalted, deified ancestor figure. (1054)

toga—The garment worn by an ancient Roman male citizen. (176)

togu na—"House of words." A Dogon (Mali) men's house, where deliberations vital to community welfare take place. (1078)

tokonoma—A shallow alcove in a Japanese room, which is used for decoration, such as a painting or stylized flower arrangement. (1011)

tonality—See *color.* (7)

tondo (pl. **tondi**)—A circular painting or *relief* sculpture. (219, 585, 10-15A)

Torah—The Hebrew religious scroll containing the *Pentateuch.* (235)

torana—Gateway in the stone fence around a *stupa,* located at the cardinal points of the compass. (430, 15-8A)

torque—The distinctive necklace worn by the Gauls. (156)

tracery—Ornamental stonework for holding *stained glass* in place, characteristic of *Gothic cathedrals.* In plate tracery, the glass fills only the "punched holes" in the heavy ornamental stonework. In bar tracery, the stained-glass windows fill almost the entire opening, and the stonework is unobtrusive. (373, 414)

tramezzo—A screen placed across the *nave* of a church to separate the clergy from the lay audience. (14-6A)

transept—The part of a church with an axis that crosses the *nave* at a right angle. (243, 564, 14-5A)

transubstantiation—The transformation of the Eucharistic bread and wine into the body and blood of Christ. (24-18A)

transverse arch—An *arch* separating one *vaulted bay* from the next. (340)

transverse barrel vault—In medieval architecture, a semicylindrical *vault* oriented at a 90° angle to the *nave* of a church. (12-10A)

transverse rib—See *rib.* (373)

treasury—In ancient Greece, a small building set up for the safe storage of *votive offerings.* (119)

trefoil—A cloverlike ornament or symbol with stylized leaves in groups of three. (425)

trefoil arch—A triple-lobed arch. (402)

tribune—In church architecture, a gallery over the inner *aisle* flanking the *nave.* (337)

triclinium—The dining room of a Roman house. (190, 6-9A)

trident—The three-pronged pitchfork associated with the ancient Greek sea god Poseidon (Roman, Neptune). (107, 435)

triforium—In a *Gothic cathedral,* the *blind arcaded* gallery below the *clerestory;* occasionally, the *arcades* are filled with *stained glass.* (370, 373, 20-4A)

triglyph—A triple projecting, grooved member of a *Doric frieze* that alternates with *metopes.* (116, 640)

trilithon—A pair of *monoliths* topped with a *lintel;* found in *megalithic* structures. (28)

Trinity—In Christianity, God the Father, his son Jesus Christ, and the Holy Spirit. (240)

tripod—An ancient Greek deep bowl on a tall three-legged stand. (5-17A)

triptych—A three-paneled painting, ivory plaque, or *altarpiece.* Also, a small, portable shrine with hinged wings used for private devotion. (275, 392, 415)

triratna—A tripartite symbol of the three jewels of Buddhism—the Buddha himself, his *dharma,* and the *sangha.* (15-8A)

triumphal arch—In Roman architecture, a free-standing *arch* commemorating an important event, such as a military victory or the opening of a new road. (205, 575)

trompe l'oeil—French, "fools the eye." A form of *illusionistic* painting that aims to deceive viewers into believing they are seeing real objects rather than a representation of those objects. (595, 24-14A)

true fresco—See *fresco.* (408, 409, 502)

trumeau—In church architecture, the *pillar* or center post supporting the *lintel* in the middle of the doorway. (344, 20-2A)

tubicen—Latin, "trumpet player." (157)

tughra—The official signature of an Ottoman emperor. (10-23A)

tukutuku—A stitched lattice panel found in a Maori (New Zealand) meetinghouse. (1043)

tumulus (pl. **tumuli**)—Latin, "burial mound." In Etruscan architecture, tumuli cover one or more subterranean multichambered tombs cut out of the local tufa (limestone). Also characteristic of the Japanese Kofun period of the third and fourth centuries. (27, 170, 309, 478)

tunnel vault—See *vault.* (12, 52, 184, 338, 585, 981)

turris—See *westwork.* (323)

Tuscan column—The standard type of Etruscan *column.* It resembles ancient Greek *Doric* columns but is made of wood, is unfluted, and has a *base.* Also a popular motif in *Renaissance* and *Baroque* architecture. (168, 587, 618)

twisted perspective—See *composite view.* (23, 523)

tympanum (pl. **tympana**)—The space enclosed by a *lintel* and an *arch* over a doorway. (344, 538, 590, 14-12A)

typology—In Christian theology, the recognition of concordances between events, especially between episodes in the Old and New Testaments. (238)

ukiyo-e—Japanese, "pictures of the floating world." During the Edo period, *woodcut prints* depicting brothels, popular entertainment, and beautiful women. (1015, 28-16B)

underglaze—In *porcelain* decoration, the *technique* of applying mineral colors to the surface before the main firing, followed by an application of clear *glaze.* See also *overglaze.* (986, 992)

Upanishads—South Asian religious texts of ca. 800–500 BCE that introduced the concepts of *samsara, karma,* and *moksha.* (427)

uraeus—An Egyptian cobra; one of the emblems of *pharaonic* kingship. (63)

urna—A whorl of hair, represented as a dot, between the brows; one of the *lakshanas* of the Buddha. (427)

ushabti—In ancient Egypt, a figurine placed in a tomb to act as a servant to the deceased in the afterlife. (61)

ushnisha—A knot of hair on the top of the head; one of the *lakshanas* of the Buddha. (427)

Usonian—Frank Lloyd Wright's term for the inexpensive houses he designed for ordinary people. *Usonian* derives from "United States of North America." (896)

valley temple—The temple closest to the Nile River associated with each of the Great Pyramids at Gizeh in ancient Egypt. (62)

value—See *color.* (7, 813)

vanishing point—See *perspective.* (547, 567)

vanitas—Latin, "vanity." A term describing paintings (particularly 17th-century Dutch *still lifes*) that include references to death. (695, 23-3A, 26-7A)

vanth—An Etruscan female winged demon of death. (176)

vassal—In *feudalism,* a person who swears allegiance to a *liege lord* and renders him military service in return for tenure of a portion of the lord's land. (334)

vault (adj. **vaulted**)—A masonry roof or ceiling constructed on the *arch* principle, or a concrete roof of the same shape. A barrel (or tunnel) vault, semicylindrical in cross-*section,* is in effect a deep arch or an uninterrupted series of arches, one behind the other, over an oblong space. A quadrant vault is a half-barrel vault. A groin (or cross) vault is formed at the point at which two barrel vaults intersect at right angles. In a ribbed vault, there is a framework of *ribs* or arches under the intersections of the vaulting sections. A sexpartite vault is one whose ribs divide the vault into six compartments. A fan vault is a vault characteristic of English *Perpendicular Gothic* architecture, in which radiating ribs form a fanlike pattern. (12, 52)

vaulting web—See *web.* (373)

Veda—Sanskrit, "knowledge." One of four second-millennium BCE South Asian compilations of religious learning. (427)

veduta (pl. **vedute**)—Italian, "scenic view." (744)

velarium—In a Roman *amphitheater,* the cloth awning that could be rolled down from the top of the *cavea* to shield spectators from sun or rain. (190)

vellum—Calfskin prepared as a surface for writing or painting. (249, 604)

venationes—Ancient Roman wild animal hunts staged in an *amphitheater.* (203)

veristic—True to natural appearance; superrealistic. (185)

vihara—A Buddhist *monastery,* often cut into a hill. (429)

vimana—A pyramidal tower over the *garbha griha* of a Hindu temple of the southern style. (438, 439, 977)

vita—Italian, "life." Also, the title of a biography. (682)

vita contemplativa—Latin, "contemplative life." The secluded spiritual life of monks and nuns. (342)

vizier—An Egyptian pharaoh's chief administrator. (3-11B)

volume—The *space* that *mass* organizes, divides, or encloses. (8)

volute—A spiral, scroll-like form characteristic of the ancient Greek *Ionic* and the Roman *Composite capital.* (51, 116)

votive offering—A gift of gratitude to a deity. (35)

voussoir—A wedge-shaped stone block used in the construction of a true *arch.* The central voussoir, which sets the arch, is called the keystone. (175, 344, 640)

wabi—A 16th-century Japanese art style characterized by refined rusticity and an appreciation of simplicity and austerity. (1012)

wainscoting—Paneling on the lower part of interior walls. (827)

waka sran—"People of wood." Baule (Côte d'Ivoire) wooden figural sculptures. (1069)

warp—The vertical threads of a loom or cloth. (510)

wat—A Buddhist *monastery* in Cambodia. (443)

web—The masonry blocks that fill the area between the *ribs* of a *groin vault.* Also called vaulting web. (368)

wedjat—The eye of the Egyptian falcon-god Horus, a powerful *amulet.* (57, 61)

weft—The horizontal threads of a loom or cloth. (510)

weld—To join metal parts by heating, as in assembling the separate parts of a *statue* made by *casting.* (11)

were-jaguar—A composite human-jaguar; a common motif in Olmec art. (494)

westwork—German, "western entrance structure." The *facade* and towers at the western end of a medieval church, principally in Germany. In contemporaneous documents the westwork is called a castellum (Latin, "castle" or "fortress") or turris ("tower"). (323)

wet-plate photography—An early photographic process in which the photographic plate is exposed, developed, and fixed while wet. (792)

white-ground painting—An ancient Greek vase-painting *technique* in which the pot was first covered with a *slip* of very fine white clay, over which black *glaze* was used to outline figures, and diluted brown, purple, red, and white were used to color them. (142)

woodcut—A wooden block on the surface of which those parts not intended to *print* are cut away to a slight depth, leaving the design raised; also, the printed impression made with such a block. (554, 556)

yaksha (m.), **yakshi** (f.)—Lesser local male and female Buddhist and Hindu divinities. Yakshis are goddesses associated with fertility and vegetation. Yakshas, the male equivalent of yakshis, are often represented as fleshy but powerful males. (430, 432, 15-6B)

yamato-e—Also known as native-style painting, a purely Japanese style that often involved colorful, decorative representations of Japanese narratives or *landscapes.* (485)

yang—In Chinese cosmology, the principle of active masculine energy, which permeates the universe in varying proportions with yin, the principle of passive feminine energy. (463)

yasti—In Buddhist architecture, the mast or pole that arises from the dome of the *stupa* and its *harmika* and symbolizes the axis of the universe; it is adorned with a series of chatras (stone disks). (430)

yin—See *yang.* (463)

yoga—A method for controlling the body and relaxing the mind used in later Indian religions to yoke, or unite, the practitioner to the divine. (426)

yosegi—Japanese *joined-wood technique.* (17-13A)

Zen—A Japanese Buddhist sect and its doctrine, emphasizing enlightenment through intuition and introspection rather than the study of scripture. In Chinese, Chan. (470, 1007)

ziggurat—In ancient Mesopotamian architecture, a monumental platform for a temple. (33, 289)

zoopraxiscope—A device invented by Eadweard Muybridge in the 19th century to project sequences of still photographic images; a predecessor of the modern motion-picture projector. (796)

BIBLIOGRAPHY

This list of books is very selective but comprehensive enough to satisfy the reading interests of the beginning art history student and general reader. Significantly expanded from the previous edition, the 14th edition bibliography can also serve as the basis for undergraduate research papers. The resources listed range from works that are valuable primarily for their reproductions to those that are scholarly surveys of schools and periods or monographs on individual artists. The emphasis is on recent in-print books and on books likely to be found in college and municipal libraries. No entries for periodical articles appear, but the bibliography begins with a list of some of the major journals that publish art historical scholarship in English.

Selected Periodicals

About the Author

Fred S. Kleiner (Ph.D., *Columbia University*) is the author or co-author of the 10th, 11th, 12th, and 13th editions of *Art through the Ages: A Global History*, winner of both the Texty and McGuffey book prizes of the Text and Academic Authors Association, as well as the 1st, 2nd, and 3rd editions of *Art through the Ages: A Concise History*, and more than a hundred publications on Greek and Roman art and architecture, including *A History of Roman Art*, also published by Wadsworth. He has taught the art history survey course for more than three decades, first at the *University of Virginia* and, since 1978, at *Boston University*, where he is currently Professor of Art History and Archaeology and Chair of the Department of History of Art and Architecture. From 1985 to 1998, he was Editor-in-Chief of the *American Journal of Archaeology.* Long acclaimed for his inspiring lectures and dedication to students, Professor Kleiner won Boston University's Metcalf Award for Excellence in Teaching as well as the College Prize for Undergraduate Advising in the Humanities in 2002, and he is a two-time winner of the Distinguished Teaching Prize in the College of Arts and Sciences Honors Program. In 2007, he was elected a Fellow of the Society of Antiquaries of London, and in 2009, in recognition of lifetime achievement in publication and teaching, a Fellow of the Text and Academic Authors Association.

*This text is also available split into **Volume I** and **Volume II**, and as a convenient six-paperback **Backpack Edition***

INSTRUCTOR'S EDITION This is your personal copy for use in textbook evaluation. Sale or resale is prohibited and will contribute to higher student textbook costs.

YOUR CLASS, YOUR CHOICE

Gardner's Art through the Ages is available in a variety of formats designed to meet a range of course needs—each with a host of online CourseMate learning tools designed to take students' learning further, faster. Contact your local Cengage Learning Representative for detailed information on each edition, and start building your perfect course package today.

Comprehensive Edition:
